

# START WORK NOTIFICATION

## FORESTHILL SITE

22990 Foresthill Road  
Foresthill, California

The Department of Toxic Substances Control (DTSC) is displaying this notice to inform the community about plans to remove about 200 cubic yards of arsenic-impacted mine spoils from the site and seal adits. DTSC has recently approved the Removal Action Workplan for this activity and is the regulatory agency responsible for overseeing all cleanup work at the site.

### Cleanup Work

Work will take place in the Summer of 2009 and will include the following:

- Excavation of contaminated soil using standard construction equipment such as loaders and backhoes to pick up soil. Soil will be put in truck beds and covered for removal to an off-site location.
- Excavated areas will be filled with clean soil and graded.
- Sealing of adits using reinforced concrete.
- Operations to control dust will be employed including spraying excavation areas and unpaved roads with water.

### Site Health and Safety Plan

All work will be overseen and approved by DTSC and conducted in accordance with a site-specific Health and Safety Plan designed to protect on-site workers and the surrounding community. Workers may wear safety gear while working on-site and operating heavy equipment.

### Hours of Operation and Truck Route

Soil removal activities will occur Monday through Friday between the hours of 7:00 a.m. to 6:00 p.m. and will last about ten days. Approximately 15 truck-loads of impacted soils will be transported over the duration of the project to an off-site licensed disposal facility. Traffic may be briefly delayed periodically while trucks enter and exit the site. Trucks will not enter the Foresthill Divide Middle School zone during drop off and pick up times between the hours of 7:30 a.m. to 8:15 a.m. and 2:45 p.m. to 3:15 p.m. when school is in session.

### Removal Action Workplan

This work will be done according to the DTSC-approved Removal Action Workplan for the site.
