Technology Description:

The INFICON® HAPSITE® Portable Gas Chromatography Mass Spectrometer is a field instrument for measuring volatile organic compounds with molecular weights typically between 45 to 300 amu in air, water, and soil by headspace analysis as specified in the certification notice published in the California Regulatory Notice Register on March 19, 2004, Register No. 2004, Volume No. 12-Z, pages 368-371. With the advantages of fast on-site analysis, the INFICON HAPSITE system significantly improves the sample turnaround time to generate data in a timely manner for the protection of the public health and the environment. The INFICON HAPSITE has been demonstrated to be a viable cost effective technology to support site characterization, cleanup and remediation activities, provided that the instrument is operated in accordance with standard operating procedures and quality control program established by the manufacturer.
