**for**  
**Wyle Laboratories Norco Facility Site**  
**January 30, 2006**

**SITE INVESTIGATION/CLEANUP**

- Wyle is preparing to modify the existing heating, ventilation and air conditioning (HVAC) system in the Norco High School Science Building. The adjustments are intended to reduce the levels of vinyl chloride and other chemicals found in the indoor air. We required Wyle to take this action and we are overseeing the work.
- Continued operation and maintenance of the vapor extraction system, located on the Wyle property near Golden West Lane. The system pulls chemical vapors from the soil through a series of underground pipes and passes them through a carbon filter to remove the contaminants. The system will help prevent chemical vapors from seeping into the homes at the southern end of Golden West Lane. The vacuum readings in monitoring probes offsite were also recorded, to determine how much air vapor the vacuum unit is pulling back onto the site.

Ongoing Remedial Investigation activities:

**Last week**

Onsite:

- Continued First Quarter 2006 groundwater sampling.

Offsite:

- Collected vacuum measurements in monitoring and extraction wells associated with the extraction system located on the Wyle property near Golden West Lane. These measurements were taken to determine how much air vapor the vacuum unit is pulling back onto the site, and will help us determine how well the system is working.
- Sampled permanent soil vapor probes VW-1 through VW-17 as part of quarterly sampling. These probes are located along Golden West Lane, Third Street, and Hillside Avenue.
- Measured water levels in a number of offsite wells including MW-16, MW-19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 31, and the private well located at Third and Hillside. These wells are located along Golden West Lane, Third Street, Hillside Avenue, at Norco High School, and the southern portion of Norco Intermediate School.

**Sampling planned for this week**

Onsite:

- Continue First Quarter 2006 groundwater sampling.

Offsite:

- Continue collecting vacuum measurements in monitoring and extraction wells associated with the extraction system, located on the Wyle property near Golden West Lane. These measurements are taken to determine how much air vapor the vacuum unit is pulling back onto the site, and will help us determine how well the system is working.
- Continue sampling permanent soil vapor probes VW-1 through VW-6 and VW-14 through VW-16 as part of quarterly sampling. These probes are located along Golden West Lane.

**PUBLIC PARTICIPATION**

- No change from last week's update.
