

Section 261.21(a) (3) states a solid waste will be an ignitable hazardous waste if it is an ignitable compressed gas as defined in DOT's regulations 49 CFR 173.300, and as determined by the test methods described in that regulation. 49 CFR 173.300 defines "flammable compressed gas" but not "ignitable."

Section 261.21(a) (3) refers to a flammable compressed gas, rather than an ignitable compressed gas.
