Re: Comments on 45-Day
(DTSC Reference Number: R-2010-03, OAL Reference NumberZ-2012-080705)

Ms. Von Burg,

The Air Conditioning Contractors of America (ACCA) appreciate the opportunity to provide comments on the 45-day public notice for the mercury thermostat collection and performance requirement. As the only nationwide association representing the technical, educational and policy interests of small and large businesses that design, install and maintain indoor environmental systems, ACCA takes special interest in this issue. ACCA supports the goal of reducing and eventually eliminating mercury from California's landfills with proper disposal of mercury thermostats. To this end, ACCA has partnered with the Thermostat Recycling Corporation (TRC), a non-profit corporation voluntarily founded by thermostat manufacturers for the purpose of collecting and properly disposing mercury thermostats.

While it is encouraging to see that the latest proposed regulation language removes the excessive contractor detailed information disclosure requirements and costly citations, ACCA remains concerned about the practicality and feasibility with the current proposal. The proposed requirement for contractors to disclose license numbers at drop off locations and the record keeping burdens associated with this requirement poses a number of problems for contractors and distributors alike. ACCA is concerned that contractor's confidential business information may be compromised while generating more burdens for distributors and create an additional incentive for noncompliance.

As ACCA stated in the October 19, 2011, comments on the proposed regulations, contractors in California already comply with California law and properly dispose of mercury thermostats through the TRC program. For this regulation to accomplish its goal it must be simple and

The Essential Partner for Contractor Excellence.

flexible so that nothing hinders participation. In agreement with Heating, Air-Conditioning & Refrigeration Distributors International (HARDI), ACCA requests the elimination of language requiring the reporting and disclosure of contractor license numbers and information. ACCA believes this increased requirement would have the opposite desired effect. This concept of collecting contractor license numbers is not well founded or researched.

Any step that fundamentally alters the simplicity of the program needs to be weighed against any perceived benefits of the change. It is well understood that economics and convenience are critical factors in any recycling program^[1]. Currently, using any of TRC's collection locations in California to properly dispose of thermostats requires nothing more than dropping the thermostat in the collection bin. HVACR Technicians simply place whole thermostats in the provided collection container. Requiring a technician to record a CSLB Number on a bag or container with thermostats reduces convenience. At the same time the use of additional packaging would decrease bin volume requiring more frequent bin shipments and add to TRC's administrative costs with additional handling and disposal of the packaging. For the collection location it takes around 5 minutes to prepare the collection bin for shipment. Adding the step of reporting the CSLB Number at a collection location fundamentally alters the process for both the collection point and program participant. Finally, additional transaction costs (e.g. providing number, recording number, requiring staff assistance with recycling) will result in less recycling rather than more.

ACCA comments that it is also unclear how CSLB Numbers will be captured and reported to TRC. Would the collection points use log sheets and include them in the bin or would they create electronic records and transmit them? ACCA has some familiarity with information disclosure requirements and notes the potential volume of data to be captured and reported. There are 11,449 active C-20 licenses in California and according to the Bureau of Labor Statistics a minimum 17,000 HVAC technicians.^[2] Assuming an average of 3 thermostats per transaction, under the proposed performance requirements the regulation contemplates approximately 49,000 transactions be recorded and reported annually. As a CSLB license certifies the business not the technician, it is unclear how the CSLB number or the absence of a CSLB number (or the frequency the number was reported) is a valid indicator of compliance with the requirement to recycle mercury-added thermostats.

Proper disposal of mercury thermostats is already required by law under the Universal Waste Rules. The majority of our contractors act in accordance with these rules, but as with any industry, there are some who will choose not to comply. Experience in our industry has informed us that there is indeed a correlation between additional requirements and the regulatory

^[1] Shaufique F. Siddique, et al, The Effects of Behavior and Attitudes on Drop-off Recycling Activities, *Resource Conservation and Recycling* 54 (2010) 163-170.

^[2] Estimate undercounts total number of technicians as it does not include self-employed workers. Available at: [http://www.bls.gov/oes/current/oes499021.htm#\(1\)](http://www.bls.gov/oes/current/oes499021.htm#(1)).

program's ultimate success. The more inconvenience associated with mercury switch recycling, the greater the risk for non-compliance by those who will choose to take the easier, less burdensome path.

The success of regulations on service technicians of any industry struggles with compliance when there is a heavy administrative burden and a low level of enforcement. As you may be aware, HVACR technicians must be properly certified to recycle or reclaim ozone depleting refrigerants under the US EPA's Section 608 Refrigerant Recycling Rule. The rule is designed to limit emissions during maintenance while encouraging the reuse of those refrigerants through recovery, recycling and reclamation. Enforcement by the EPA is lax, especially at the individual technician level. Part of the problem is there are few resources to enforce the laws and no evidence remains when a technician has illegally vented refrigerant into the atmosphere. While the laws are in place to protect the environment and the upstanding contractor, the process to evacuate the system adds time to a job and the cost of the required equipment is significant. As a result, there is little or no penalty for non-compliance and the amount of CFC and HCFC refrigerants that are recovered, recycled, and reclaimed have remained well below EPA's expectations.

ACCA supports comments submitted by TRC and made by sister trade associations in the heating, ventilation and air conditioning (HVAC) community which highlight additional relevant points of concern.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Emily Rogers', with a large, stylized flourish extending to the right.

Emily Rogers

Re: Comments on Proposed Regulation on Mercury Thermostat Collection and Performance Requirements: Department Reference Number: R-2010-03

Dear Ms. Von Burg:

These comments are submitted by the Air-Conditioning, Heating, and Refrigeration Institute (AHRI) in response to the Department of Toxic Substances' Mercury Thermostat Collection and Performance Requirement (August 2012) Division 4.5, Title 22, California Code of Regulation, Chapter 24.

AHRI is the trade association representing manufacturers of heating, cooling, water heating, and commercial refrigeration equipment. More than 300 members strong, AHRI is an internationally recognized advocate for the industry, and develops standards for and certifies the performance of many of the products manufactured by our members. In North America, the annual output of the HVACR industry is worth more than \$20 billion. In the United States alone, our members employ approximately 130,000 people, and support some 800,000 dealers, contractors and technicians.

AHRI supports efforts to collect and properly dispose mercury-containing thermostats. Unfortunately, the Department of Toxic Substances Control's (DTSC) proposed rulemaking, as currently written, will not achieve its intended purpose. The proposed regulation will require the collection of more thermostats than can possibly be collected and cause an unnecessary burden on manufacturers. In addition to proposing thermostat collection rates that are simply not feasible, the proposed regulation adds reporting requirements that are burdensome to manufacturers and that may serve as a disincentive to recycling.

AHRI has reviewed the study by Skumatz Economic Research Associates' (SERA) and finds it highly questionable. We believe that the DTSC should not base its estimate of mercury-containing thermostats on an unconvincing study or posit unexplained recovery rates.

In addition, AHRI has two major issues with the proposed rule as discussed below:

Issue 1 – Estimated Annual Flow of Mercury-Containing Thermostats

Section 66274.4 of the proposed rule, *Methodology for Determining the Number of Out-of-Service Mercury Added Thermostats Becoming Waste Annually*, relies primarily on a single study by SERA. However, the study has not been peer reviewed and cannot, in our opinion, be used to justify the proposed regulation. In addition, we have few concerns with the study:

- The baseline estimate of mercury thermostats in California is based on web survey results where home and business occupants were asked to decipher between mercury containing and non-mercury containing thermostats and report accordingly. As a result, SERA notes that “data used for [the SERA] analysis are imperfect. It is based on recall of current occupants, some of whom have been in the location a long time, and some were newer”. Baseline data for a study of such regulatory influence should be collected by trained professionals, not by a random selection of lightly-incentivized citizens who have varying degrees of experience in their homes or businesses.
- The validation method relied on 30 site visits in the San Francisco Bay Area. However, California’s cities and towns have diverse building types, climatic zones, supply chains, industries, levels of education, etc. The ability of citizens across California, in different types of buildings, cannot be generalized with a validation of such a small size in such a specific geography.

AHRI recommends that DTSC revise its estimated number of thermostats available for collection in accordance with the methods used in Canada’s Switch the ‘Stat program. Canadian requirements utilize shipment data provided by HVAC manufacturers and contractors as a basis for estimating the quantity of thermostats available for collection¹.

One part of the underlying studies surveyed contractors and asked what percentage of the programmable thermostats they were replacing were mercury thermostats. Undoubtedly, HVAC contractors have a higher and less variable judgment of the mercury content of a thermometer than the population of California. Once finalized, the results of the survey were compared to national statistics on the percentage of households with programmable thermostats. AHRI suggests that a similar study be conducted in California and compared to the results of the SERA study.

Issue 2 – Annual Collection Rate Performance Requirements

The proposed regulation’s annual collection rates are arbitrary and overly aggressive. Instead of providing empirical data, the DTSC compares historic collection rates per capita in California, Maine, Vermont and Maryland, in an attempt to justify the proposed increased collection levels. The comparisons are invalid for the following reasons (among others):

- California’s housing stock is younger and of different type than that in Vermont, Maine and Maryland and older buildings are more likely to contain mercury thermostats.
- The climate zones and heating, ventilation, and air-conditioning equipment markets are different from state-to-state, particularly between the east and west coasts. The utilization and removal of mercury thermostats are correlated with the types and lifetime of various HVAC products.
- Each state has imposed various collection programs that have affected the respective historical collection rates.

¹ Switch the ‘Stat stewardship plans for British Columbia, Ontario, and Manitoba. For the methods used to determine feasible collection rates, see appendix F See appendix of the British Columbia plan. <http://www.switchthestat.ca/eng/stewardship-plans.php>

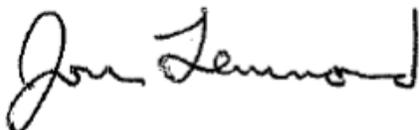

- California's Title 24 building codes (created in 1978) have been instituted for decades, are unique among the compared states, and have steered HVAC installers away from mercury thermostats and towards programmable (also known as "setback") thermostats. The current version of the Title 24 codes states, "Heating systems shall be equipped with thermostats that meet the setback thermostat requirements of Section 112(c)" and "When a space-conditioning system is altered by the installation or replacement of the air handler, outdoor condensing unit of a split system air conditioner or heat pump, cooling or heating coil, or the furnace heat exchanger, the following requirements shall be met; Non-setback thermostats shall be replaced with setback thermostats"².
- Maryland's high collection rates in 2009 and 2010 are due to a demand response program passed by legislators in 2008 and implemented by the Baltimore Gas and Electric (BGE) utility. The rate-payer funded program offered free setback thermostats in exchange for allowing the utility to adjust temperature set points during periods of peak load. Over 300,000 BGE customers have participated in the program and resulted in the collection of over 70,000 mercury containing thermostats. While California has fewer mercury-containing thermostats per capita than Maryland and will not achieve the same high collection rates generated during the peak of the BGE program, DTSC should consider a similar demand-response program in California in the coming years.

Due to the reasons stated above, AHRI finds it highly likely that California has a fundamentally different amount and flow of mercury containing thermostats per person, than that in Maine, Vermont, and Maryland and suggests additional study on the topic.

Conclusions

The DTSC builds its proposed regulation upon an unverified estimate of mercury thermostats in use in California from a study that has not been peer reviewed. Additionally, the collection rates proposed by DTSC are not justified, not feasible, and will likely increase burden on manufacturers. AHRI supports thermostats' collection programs such the one established by the Thermostat Recycling Corporation (TRC). Since 2002, the program has recycled over six tons of mercury. We would be in support of a program that would help TRC collect more thermostats. AHRI recommends that DTSC reconsider its proposal in collaboration with the TRC, an experienced organization with the single mission of making it easier to recycle mercury thermostats.

Sincerely,

Jonathan Lemmond, Regulatory Engineer

Re: Mercury Thermostat Collection and Performance Requirements

Dear Ms. Von Burg,

On behalf of Honeywell International Inc. (“Honeywell”), we respectfully submit the following comments on the proposed Mercury Thermostat Collection and Performance Requirements (“Regulations”). Based on our review of the Regulations and the information available in the rulemaking file,¹ there are several aspects of the Regulations that require further analysis and/or modification.

¹ It is difficult for us to meaningfully evaluate and comment upon the proposed Regulations because the rulemaking file contains very little supporting information. *See* Exhibit 1 (Sept. 5, 2012 Email from DTSC to Christopher Roberts; attachments to the DTSC email consist of (1) the Public Notice, (2) the Proposed Text, (3) the Initial Statement of Reasons, (4) a copy of the MTCA, (5) a CEQA Notice of Exemption, (6) a Form 399 Economic Impact Statement and (7) an Economic and Fiscal Impact Analysis). Moreover, in response to our attempt to obtain additional information through a Public Records Act request, we were informed that documents could not be produced until to October 5 (three days after the comment period closes). *See* Sept. 14, 2012 Letter from Robert Sullivan

I. The Methodology For Calculating The Number Of Out-Of-Service Mercury-Added Thermostats Becoming Waste Annually Is Flawed.

Section 66274.4 of the proposed Regulations establishes a methodology for determining the number of out-of-service mercury-added thermostats that become waste annually. DTSC has chosen to rely entirely on the SERA Report for establishing this critical waste thermostat baseline. But the SERA Report is deeply flawed. Indeed, the study itself identified numerous problems that resulted in “count” and “flow” estimates that do not provide a useful basis for extrapolation.

For example, to determine the number of mercury-added thermostats in California, the study relied on respondents to count and identify the type of thermostats in their homes and businesses. Digital thermostats do not contain mercury. Other types of thermostats (e.g., square, round, snap, lever, etc.) may or may not contain mercury. Removing the cover of a non-digital thermostat is the *only* way to definitively determine if the device contains mercury, but DTSC did not permit SERA to ask respondents to do so. Rather, respondents were simply told to identify the type of thermostat(s) (e.g., programmable, square, round, snap, lever, etc.) in their home or business. SERA Report at 12. The onsite survey discussed below later determined that several respondents failed to accurately count the number of thermostats in their home/business or accurately identify the type.

SERA then conducted a “very small (30 observations)” on-site validation survey to determine the percentage of these non-digital thermostat types that contain mercury (*id.* at Note to Table 1.1) and then used that data to extrapolate a “lower estimate” of the share of thermostats in California that are mercury-containing. *Id.* at Table 1.1. But 30 site-visits (which equates to 3.5% of respondents) is too small of a sample to yield meaningful results.² Indeed,

Footnote continued from previous page

to Sara Eisenberg (attached hereto as Exhibit 2). And, notably, although the Initial Statement of Reasons provides web addresses for some of the “Reports Relied On” by the Department of Toxic Substances Control (“DTSC”) the documents are not, in fact, available at those websites. *See* Exhibits 3-5.

² The inability of such a small sample to yield meaningful and valid results is evident from the fact that the SERA Report concluded, based on the small survey, that 100% of snap thermostats contain mercury. *See* SERA Report at Table 1.4 (lower estimate of 100% for snap thermostats based on validation survey). This is demonstrably false. *See* Ex. 6 (*mercury free* snap thermostat that is virtually

Footnote continued on next page

because the field validation survey was so small, the SERA Report itself acknowledges that the estimate is imperfect and that the actual share of mercury models may be lower than the “lower estimate.” *Id.* at Note to Table 1.1.

Moreover, there is no indication of how the 30 respondents who received site visits were selected or whether those respondents were typical of respondents in general. Indeed, there is reason to believe they were not. Despite the fact that this was a *statewide* survey, all of the site visits occurred in a few, relatively homogeneous counties in the Bay Area. It is not possible to validate the findings of a statewide analysis through such a limited follow-up in a small geographic area of the state. And if the respondents who received visits were not typical—*i.e.*, if they were less likely to have purchased mercury free non-programmable thermostats (due to economic, geographic, demographic or other reasons)—the results may have been further skewed by the selection process.

Finally, a recent study determined that 19% of households in California have no thermostat at all. *See* Therese Pepper, *et al.*, *How People Use Thermostats in Homes: A Review*, 46 *Building and Environment* 2529, 2533 (2011) (hereafter “*How People Use Thermostats*”) (attached hereto as Exhibit 7). This fact was not taken into account in the SERA Report, which assumes that there are 1.2 thermostats in *every* California household. As a result, the total number of thermostats in California (and the number of mercury-added thermostats derived therefrom) is likely to be significantly lower than estimated in the SERA Report.

SERA’s methodology to predict the annual “flow” of thermostats out of buildings is also flawed. To make this prediction, the study relied on respondents’ memories of when the thermostats were last replaced. As the Report acknowledges, this data, which is based on the recall of current occupants is “necessarily imperfect” (SERA Report at 18 n.26)—especially since “younger households may not know when the home was remodeled for a thermostat replacement.” *Id.* at 17.

As a result of these flaws, the waste thermostat baseline determined by the SERA Report and utilized in the proposed Regulations is not sound.

Footnote continued from previous page
identical in appearance to the picture of the snap thermostat provided in SERA’s questionnaire).

II. The Annual Collection Rate Performance Requirements Are Unreasonable.

Section 66274.5 of the proposed Regulations sets out annual collection rate performance requirements of 30% (65,100 thermostats) in 2013, 45% (95,400 thermostats) in 2014, 55% (113,850 thermostats) in 2015, 65% (131,300 thermostats) in 2016, 75% (147,750 thermostats) in 2017, and 75% in 2018 and subsequent years. Given the unsound and inflated waste thermostat baseline established in Section 66274.4, these rates translate into an unreasonably high number of thermostats which must be collected each year.

In the last several years the Thermostat Recycling Corporation (“TRC”)—which was voluntarily founded by Honeywell, White-Rodgers and General Electric in 1998—has implemented a multi-faceted effort to increase mercury-added thermostat collection and recycling.³ TRC has recruited wholesalers at tradeshow and industry meetings, reached out directly to distributors, earned media coverage through trade press and purchased advertising. TRC has employed—and continues to employ—numerous strategies to elicit wholesaler participation in the thermostat recycling program in California, including:

- Direct mail to managers of facilities in California and corporate headquarters;
- Earned media on the legal obligation to collect waste thermostats in California and other states;

³ Even before co-founding the TRC in 1998, Honeywell had engaged in substantial efforts to recycle mercury-added thermostats. As early as 1985, Honeywell began its own pilot programs in Minnesota to recycle end-of-life mercury-containing thermostats through distributors, contractors, and homeowners. These programs were developed in conjunction with, and under the guidance and authority of, the Minnesota Pollution Control Agency (“MPCA”), where Honeywell was based at the time. Honeywell proposed thermostat take-back programs to the EPA in May and October 1992, and to the MPCA in January and August of 1992 and February 1993. On October 17, 1994, Honeywell and MPCA jointly announced the availability of a homeowner mail-in program for end-of-life mercury thermostats from Minnesota residents, and in late 1994-early 1995, Honeywell requested authorization from the MPCA to operate a national program. Shortly thereafter, Honeywell, White-Rodgers and General Electric began discussions with the National Electrical Manufacturers Association about managing a national program on the industry’s behalf, and by 1998 TRC was formed as an independent not-for-profit corporation.

- Direct appeals to local and senior management of wholesale distributors with facilities in California;
- Engagement with regional and national trade associations to assist them in advising members on legal obligations in California and other states;
- Attending regional and national HVAC trade shows to provide information to raise awareness of the recycling obligation and TRC's program.

In October 2010, TRC entered into a formal agreement with the Heating Airconditioning Refrigeration Distributors International ("HARDI") trade association to promote the thermostat recycling program to HARDI members, which comprise approximately 80% of the domestic wholesale market for HVAC equipment. Pursuant to this agreement, TRC notified all 450 HARDI members of their collection obligations and encouraged them to participate in the TRC program. Similarly, TRC joined the Institute of Heating and Air Conditioning Industries, which is the largest HVAC trade association in California, and used its membership status as a means to contact contractors and distributors actively engaged in HVAC work in California. TRC has corresponded with at least five additional trade organizations, informing them of wholesalers' collection obligations and encouraging them to participate in the thermostat recycling program. *See generally* 2010 California TRC Annual Report (attached hereto as Exhibit 8).

In 2011, TRC continued its efforts by, *inter alia*, developing written materials and signage for collection points and key stakeholders, increasing the level of participation among California wholesalers and retailers, purchasing substantial advertising and developing new public service announcements. *See generally* 2011 California TRC Annual Report (attached hereto as Exhibit 9). As a result of these varied efforts, the collection and recycling of mercury thermostats has increased significantly in California: from 7,542 in 2009 to 18,697 in 2011.

The proposed annual collection rates require manufacturers to increase their collections **248%** by 2013 and to sustain infeasible growth rates over the next several years (47% growth in 2014, 19% growth in 2015, 15% growth in 2016 and 13% growth in 2017).

Table 1: Growth Rate Requirements Under Section 66274.5

<u>Year</u>	<u>Performance Requirements (TP)</u>	<u>TP expressed as number of thermostats</u>	<u>Required Growth Rate</u>
2011	n/a	(actual rate) 18,697	n/a
2013	30%	65,100	248%
2014	45%	95,400	47%
2015	55%	113,850	19%
2016	65%	131,300	15%
2017	75%	147,750	13%

Although an early growth rate of 13 or 15 percent may not be unreasonable (and has, in fact, been surpassed in recent years in California), such rates are not sustainable as the number of thermostats in the state and the number of thermostats coming out of homes and businesses declines. Indeed, such rates have *not* been maintained year-over-year in other states with collection obligations. Even Maine, which is lauded as the national model, has not achieved or sustained anything near the unreasonable growth rate demanded by the proposed Regulations. Collections in Maine grew by 19% in the *first* full year of that state’s program (2008), and growth declined to 15% in 2009, 2% in 2010 and 1% in 2011.⁴ See Table 2; see also Department of Toxic Substances Control, Initial Statement of Reasons: Mercury Thermostat Collection and Performance Requirement (hereafter “ISOR”) at 11 n.8.

Table 2: Maine Collection Trends 2008-2011

<u>MAINE</u>	<u>2008</u>	<u>Growth</u>	<u>2009</u>	<u>Growth</u>	<u>2010</u>	<u>Growth</u>	<u>2011</u>	<u>Growth</u>
Thermostats	5,555	19%	6,374	15%	6,523	2%	6,616	1%

The sole articulated basis for the overly aggressive collection rates proposed in the Regulations is that they are “based on historical collections by the [TRC] in a number of other states.” ISOR at 11. DTSC contends that “[i]n 2010, TRC programs in several small states were able to collect >500 mercury thermostats per 100,000 population,” and that the proposed collection rates are justifiable because they are “more modest.” Notably, however, the ISOR refers to only three states—Maryland, Maine and Vermont—but DTSC’s own materials

⁴ This despite the fact that Maine requires manufacturers to offer a financial incentive.

demonstrate that the per capita recovery rates in these states are outliers, with recovery rates that dwarf other states including Illinois, Iowa, Montana and Rhode Island. *See* Andre Algazi, California Department of Toxic Substances Control, *California's Mercury Thermostat Collection Act: an EPR Approach* at 12 (attached hereto as Exhibit 10) (indicating, *inter alia*, that Vermont recovers approximately .00004 pounds of mercury per capita, while Iowa and Rhode Island recover less than a quarter of that amount (less than .00001 pound per capita), and Illinois and Montana recover even less—under .000005 pounds per capita).

There are several reasons why recycling programs in California cannot be expected to achieve such unusually high per capita recovery rates.

As an initial matter, the ease with which manufacturers can achieve a higher per capita recovery rate is directly related to the per capita number of mercury-added thermostats in a state. Put simply, it is, of course, more feasible to collect 500 mercury-added thermostats when there are 80,000 such thermostats for every 100,000 people than when there are only 50,000 such thermostats for every 100,000 people. And there are unique circumstances in California that drive the per capita number of thermostats down in comparison with other states:

- Title 24 of the California Code of Regulations (also known as the California Building Standards Code) began to require “setback thermostats” in 1978, thereby significantly limiting the number of mercury-added thermostats in commerce in California. And since the mid-1990s, Title 24 has effectively banned the installation of mercury-added thermostats in any new or retrofit construction in California. This has resulted in a higher percentage of programmable (non-mercury) thermostats in California than elsewhere in the country. *See How People Use Thermostats* at 2533 (noting that “the increased number of programmable thermostats in California versus nationwide is likely attributed to the last 30 years of energy code requiring a setback or programmable thermostat”).
- As noted above, a recent study determined that 19% of households in California—a higher percentage than the national average—do not have any thermostats at all. *See Id.* (“The percentage of houses in California without thermostats differs from the national percentage due to milder weather”). In other words, the number of thermostats per capita is lower in California than it is in other states—particularly states with colder weather, like Vermont and Maine.

Moreover, no other California recycling program includes such aggressive target performance collection percentages—and a European recycling program that set similarly aggressive rates for recycling of portable batteries has proven unworkable. In 2006, the European Union (“EU”) directed its members to implement mandatory recycling obligations on manufacturers of portable batteries. Target collection rates were set at 25% by 2012 and 45% by 2016, taken against a baseline of the previous three-year sales of portable batteries. Significantly, several EU members project that they will *not* be able to increase battery collections to meet the 25% collection goal by 2012, and the 45% goal for 2016 is even more unrealistic. *See, e.g., EU set to miss targets for battery collection, recycling* (Oct. 14, 2011), available at <http://www.euractiv.com/specialreport-recycling-society/eu-set-targets-battery-collectio-news-508303>. This despite the fact that portable batteries enjoy a key collection advantage over mercury-added thermostats: end-of-life batteries retain economic value from their constituent rare metals, while the mercury in thermostats has a negative value. Moreover, while the number of mercury-added thermostats in California is constantly declining, there is a continuous flow of portable batteries into the stream of commerce. Given that the EU deems it unlikely to achieve its collection goals for a more valuable end-of-life product, DTSC’s aggressive proposed collection rates for mercury-added thermostats are unrealistic and unreasonable.

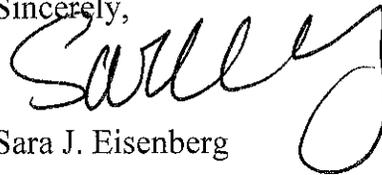

Indeed, a survey of recycling programs in the United States and Europe and found no programs (outside of lead-acid batteries⁵) that achieve similar levels of performance. And even DTSC has acknowledged that the collection rates are not feasible and that manufacturers will likely be forced into an enforcement context within a year after the regulations take effect. *See Exhibit 11.*⁶

⁵ The high collection rate for lead-acid batteries derives in large part from certain advantages lead-acid batteries enjoy that items such as mercury-added thermostats do not. For example, lead-acid batteries are replaced by or for consumers who are incentivized to exchange them at the time of replacement. Distributors and recyclers are similarly incentivized to collect lead-acid batteries because the lead contained therein retains economic value at end-of-life, whereas the mercury in thermostats has a negative value. Also, the physical nature of lead-acid batteries—their sheer size and bulk—makes them significantly harder to illegally dispose than mercury-added thermostats. Because of these important differences, DTSC cannot look to the lead-acid battery collection context as evidence to support its unrealistic mercury-added thermostat collection rates.

⁶ Accordingly, before the proposed Regulations were made available for formal public review and comment, TRC (on behalf of Honeywell and other TRC

On behalf of Honeywell, we appreciate your consideration of these comments and encourage DTSC to consider revising the proposed Regulations to ensure that the requirements contained therein are reasonable and achievable. We also ask that you please include these comments, and any other written comments that you receive, in the rulemaking file pursuant to Government Code Section 11347.3(b)(6).

Sincerely,

Sara J. Eisenberg

58319137F

members) provided DTSC officials with draft alternative regulations. *See* Exhibit 12. Honeywell continues to believe that the “Annual Collection Rate” provisions set forth therein will be at least as effective as the proposed Regulations at “provid[ing] for the collection and recycling of the maximum feasible number of out-of-service mercury-added thermostats” (Health & Safety Code §25214.8.20) and will be less burdensome on affected parties.

Hi Chris,

Attached are the documents which make up the Mercury Thermostat Collection and Performance Requirement rulemaking file.

Please let me know if you have any questions.

Hello,

I just wanted to follow up on my request to obtain copies of the rulemaking file listed below (Department Reference Number R-2010-03). Please let me know at your earliest convenience the best procedure for procuring that file.

Thanks,
Chris

Subject: Review of Rulemaking File, Ref. No. R-2010-03

Hello,

I would like to obtain a copy of the entire rulemaking file for the Mercury Thermostat Collection and Performance Requirement matter with Department Reference Number R-2010-03. What is the best procedure for acquiring a copy of the entire file? I can schedule to come to the Department just about any time to make copies.

Thanks so much,
Chris

Re: Thermostat Regulations PRA request dated 8/30/12; received by fax 9/5/12

Dear Ms. Eisenberg,

On September 5, 2012, the Department of Toxic Substances Control (DTSC) received by fax your letter dated August 30, 2012 requesting records under the Public Records Act (PRA). DTSC is in the process of gathering and reviewing the requested records.

The records need to be searched for and collected and may be located in different field offices of DTSC.

The request seeks records that are separate, distinct, and voluminous and need to be searched for, collected, and examined before they can be released.

The request seeks records that may require coordination and consultation with another agency, or two or more components of DTSC, that have a substantial interest in the records.

Once the records are collected, our legal department must review them before they can be disclosed and provided to you. I am hoping that by October 5, 2012 we will be able to notify you as to which records will be available for your review and which, if any, may be exempt from disclosure and why.

Preliminarily, it appears that some of the records you seek may likely be exempt from disclosure and will not be provided by DTSC for your review. Records which are likely exempt are

draft documents,
enforcement documents related to ongoing investigation and enforcement actions,
records of complaints or investigations,
attorney-client communications,
attorney work-product documents,

Documents containing such information are likely exempt under the following PRA exemptions:

Draft documents, Government Code section 6254(a);

Records protected by the Official Information Privilege through Government Code section 6254(k) and Evidence Code section 1040;

Records of complaints or investigations protected by Government Code section 6254(f);

Records protected by the Deliberative Process Privilege through Government Code section 6254(k) and *Times Mirror Company v. Superior Court* (1991) 53 Cal. 3d 1325, and/or the balancing of interests test of Government Code section 6255;

Records protected by the Mental Process Privilege through Government Code section 6254(k);

Records protected by the Attorney-Client Privilege through Government Code section 6254(k) and Evidence Code section 954;

Records protected by the Attorney Work Product Privilege through Government Code section 6254(k) and Code of Civil Procedure section 2018.030;

As DTSC locates the requested records, DTSC will make every effort to keep you informed about records that are not exempt from disclosure.

Heat Only Thermostat CT30A by Honeywell

Be the first to leave a review

\$14.99

Qty: 1

Model: CT30A Sku: 0-85267-26239-2

CT30A Heat Only Thermostat - Low voltage controls with a snap-action switch for heating systems only. Precise temperature control, snap action switching, mercury free.
Sku: YCT30A1003

- * Simple worry free operation
- * Bimetal temperature sensor
- * Snap Acting Switch (Magnetic Switch) does not require leveling
- * Mercury free
- * Decorative backplate included to cover wall marks from old thermostats
- * Simple, worry-free operation
- * Available in:
 - * Heat Only (CT30A)
 - * Heat/Cool (CT31A)
 - * Millivolt (CT33A)

Key Benefits

Comfort and easy operation

More Information

Heat only thermostat that is easy to use and mercury free

ABSTRACT

Residential thermostats control a substantial portion of both fuel and electrical energy—9% of the total energy consumption in the U.S. Consumers install programmable thermostats to save energy, yet numerous recent studies found that homes with programmable thermostats can use more energy than those controlled manually depending on how—or if—they are used. At the same time, thermostats are undergoing a dramatic increase in capability and features, including control of ventilation, responding to electricity price signals, and interacting with a home area network. These issues warrant a review of the current state of thermostats, evaluating their effectiveness in providing thermal comfort and energy savings, and identifying areas for further improvement or research.

This review covers the evolution in technologies of residential thermostats; we found few standards and many features. We discuss studies of how people currently use thermostats, finding that nearly half do not use the programming features. The review covers the complications associated with using a thermostat. Finally, we suggest research needed to design—and especially test with users—thermostats that can provide more comfortable and economical indoor environments.

1. Introduction

Heating and cooling homes consumes a substantial portion of energy. Most households in the U.S.¹ use thermostats to control the heating and/or cooling system in their home; in 2005, approximately 97% of households in the U.S. had a heating system and over 75% had air conditioning (Table 2.6 in [1]). In 2008, about a quarter (28% or 6.04 quadrillion BTUs) of the total residential source energy consumed was for heating and 14% (3.07 quadrillion BTUs) for cooling [2]. Most (65%) of the energy supplied by fuels (primarily natural gas, also fuel oil and propane) was for heating [3], but the use of electricity for heating nearly doubled from 1985 to 2005. While approximately 20% of total residential electrical energy was used for cooling, air conditioning constitutes the largest single contributor to peak electricity demand (which can lead to brown-outs and wildly variable wholesale prices) [4]. Moreover, electricity use for air conditioning is rapidly increasing, due to population growth in hot climates and greater demand for comfort. In 2009,

nearly 90% of newly constructed single family homes included air conditioning [5]. In 2008, energy for heating and cooling homes comprised approximately 42% of the total source residential energy and about 9% of the total source energy in the U.S. [2,6].

The basic function of the typical residential thermostat—to set a target temperature, see the current temperature, and control the equipment accordingly—has remained constant over the past sixty years. A second—and expanding—role is to save energy. Many new features and functions have emerged in the past twenty years to facilitate the energy-saving role. While the thermostats' capabilities to control temperature are well understood, less is known about the effectiveness of the technologies devised to enable savings. The uncertainty in these savings is increasingly important because manufacturers are adding many new features and functions that affect the ability and ease of saving energy. The most advanced thermostats control multiple zones and humidity levels. Still other features include one-touch energy-savings, access to weather, display of energy consumption, alerts for maintenance (e.g., battery, filter), and diagnostics [7]. Remote control is becoming a popular feature as smart phones and Internet access become ubiquitous. Some changes are dictated by regulations or utilities. Since 1978, California building codes have required thermostats with night setback capabilities and many other regions followed. The Environmental Protection Agency (EPA) established

* Corresponding author. Tel.: +1 510 289 4278.

E-mail address: therese.peffer@uc-ciee.org (T. Peffer).¹ The thermostats described in this paper mostly control forced-air systems found in North American homes. However, many of the same issues apply to other heating and cooling systems found in Europe, Australia, and East Asia.

technical specifications for programmable thermostats for its EnergyStar program in 1995. A relatively recent development is residential demand response: utilities with high costs of supplying peak power want to communicate directly with thermostats because adjusting temperatures in cooperating customers' homes is cheaper than building new generation capacity.

This review describes the history and current state of the art of thermostats in Sections 2 and 3. Section 4 draws from the literature to understand what types of thermostats are installed and how they are used across the U.S. Section 5 discusses the energy savings from thermostats. Section 6 categorizes the types of problems in adopting programmable thermostats. Section 7 pairs what we know with what we don't know in suggesting areas for future research and policy implications. Section 8 of the review is the conclusion.

2. History

Since the first fire was lit in a cave, heating and cooling for thermal comfort in dwellings has required human intervention [8]. The Romans were among the first to move from the concept of a simple open fire to a central heating system, where hot air from a wood fire flowed through under-floor chambers or hypocaust [9]. In fact, the word thermostat is derived from the Greek words *thermos* ("hot") and *statos* ("a standing"). Cornelius van Drebbel (born 1572 in Alkmaar, Holland) is commonly credited with inventing the thermostat—automated temperature control in the form of a mechanical device; Van Drebbel was able to regulate the temperature of ovens and chicken incubators [8,10].

Modern thermostat history in the U.S. revolves around two companies who are still in the business of building thermal controls today: Johnson Controls and Honeywell. In 1883, Warren S. Johnson received a patent for the first electric room thermostat; upon his death in 1911, his company Johnson Controls focused on temperature controls for nonresidential buildings only [11]. In 1885, Albert Butz developed a furnace regulator that used a "damper flapper" to control air entry (and thus heat output) to a furnace. His company, the Electric Heat Regulator Co., eventually became Honeywell Inc [12]. In 1906, Honeywell produced the first automatic programmable setback thermostat, using a clock to turn the temperature down at night and up in the morning. The first thermostat with an anticipator—a means of reducing temperature overshoot—was produced in 1924. The first modern thermostat controlling a central heating system (typically a forced air system in the U.S.) used a bi-metallic strip to measure temperature change and used mercury in a tilting glass tube to provide contact with the electrodes in the tube to control the furnace. The typical thermostat interface was a simple rectangular box on the wall that used sliding levers to control the temperature; the ubiquitous Honeywell Round, which emerged in 1953 and is still available today, required the user to turn the round dial. These types of thermostats are often termed manual, standard, or mechanical thermostats. Both current temperature and the target or desired temperature were displayed on an analog scale showing temperature range.

Over the past 40 years, different policies have driven the development of features in thermostats. The first oil crisis in 1973 spawned the creation of the first energy code (Building Energy Efficiency Standards) in California in 1978, part of which required clock or setback thermostats for new homes. These thermostats were designed to save energy by automatically relaxing temperature setpoints when people are sleeping. Studies performed in the 1970s, based on models of energy flows through a house, suggested that on average a daily 8-h nighttime setback could bring approximately 1% reduction in natural gas consumption for each degree Fahrenheit offset [13]. This result became and

remains the rule of thumb that guides much of the discussion on the effectiveness of programmable thermostats with gas- and oil-fired heating systems.

The physical human interface on thermostats has evolved partly because of technical innovations and partly pushed by regulations. The Americans with Disabilities Act (ADA) standards introduced in 1988 mandated controls that did not require the twisting of one's wrist [14]. This requirement along with the trend away from mechanical thermostats with their moving parts towards semiconductor electronic manufacturing drove the "modern" look for thermostats. By the early 1990s, the new thermostat was a plastic rectangular box with few moving parts; thermistors replaced bi-metallic strips, digital display replaced analog, and push buttons replaced dials and slider bars. The addition of memory allowed the storage of data, such as target temperatures for different times of day, and required a power source.

In 1995, the Environmental Protection Agency's EnergyStar program included programmable thermostats, suggesting that homeowners could save about \$180 a year with a programmable thermostat [15]. EnergyStar requirements included certain features: default energy-saving and comfort setpoint temperatures, cycle rate setting, recovery systems, and a hold or override option. Consumers understood that the EnergyStar emblem on an appliance indicated energy efficient equipment; manufacturers had to comply with EnergyStar eligibility requirements.

Throughout the 1990s programming grew more complex, with these features plus programming schedules for weekend/weekday (5 + 2), seven-day, or vacation. More recently, part of the 2008 California Building Energy Efficiency Standards, commonly referred to as Title 24, requires that programmable thermostats have the ability to set temperature preferences for at least four different time periods per day.

Utilities across the globe are exploring time-varying price tariffs to reduce peak electricity demand—driven primarily from space heating (e.g., in hydroelectric-rich New Zealand and Canada) and cooling systems (e.g., in the U.S.). This created the demand for programmable communicating thermostats that can receive price or reliability signals from the utility. In California, while these thermostats were not included in the 2008 energy code, this is expected for future iterations; at the federal level, this will most likely start with the new EnergyStar specifications regarding climate controls (a subset of programmable thermostats) that include communication and time of use price level indication [16].

Remotely controlled thermostats have become both feasible and possible with the growing prevalence of cell phones, home area networks (HAN), and the Internet in residences. Several applications have been developed to enable control of a thermostat using a mobile phone. Global Positioning Systems (GPS) in mobile phones can be used to convey occupancy and proximity information to thermostats, which can then predict arrival times of a home's occupants and modify the setpoint accordingly [17].

Many aspects of a programmable thermostat's functionality have been transferred to the Internet. An Internet thermostat describes a programmable thermostat that connects to an IP (Internet Protocol) network; models are currently being made by Proliphix, Aprilaire, and EcoBee. Internet connectivity has spawned companies such as EcoFactor, which sells an energy-saving thermostat service. One network-enabled thermostat has a removable standardized communication module (based on U-SNAP (Utility Smart Network Access Port)) to connect the thermostat to a Home Area Network via various wireless standards, such as ZigBee, Z-Wave, RDS (Radio Data System), WiFi, FlexNet and Trilliant [18]. Further, companies such as Control4 who specialize in home automation have added a comfort function to their home management interface to remotely control an Internet thermostat

from the TV or other display. Likewise, security companies such as ADT have also included thermostats in their networks.

Thermostats have come a long way from simply controlling a heating or cooling unit and displaying current and target indoor temperatures (Fig. 1). Today's thermostats can control ventilation, whole house fans, humidity, and multiple zones. The user interface can be remote (e.g., controlled through web or smart phone), voice-controlled, a large full color LCD or touchscreen. Displays now can include outdoor temperature, messages from the utility, or maintenance alerts (e.g., battery or filter replacement warning).

These trends have shifted the thermostat from being a simple wired appendage of the heating and cooling systems to a separate product resembling software or consumer electronics. This is also reflected in the shift in the orientation of companies involved in thermostats, from more mechanical (e.g., manufacturers of HVAC equipment) to those more familiar with consumer electronics and communications.

3. Architecture & features

A basic thermostat has four components: a temperature sensor in the desired environment, a switch or actuator to the physical target of heating, ventilating, and air conditioning (HVAC) equipment, a feedback loop between the two, and some means of displaying the current (and target) temperatures as well as providing a means for the user to change the target temperature. Electronic devices with digital displays have largely replaced mechanical and mercury-based thermostats; wired connections are slowly being replaced by wireless. Advances in communication networks have allowed thermostats to become increasingly disaggregated into separate components. Fig. 2 shows a schematic of thermostat components, which may or may not be packaged together. The temperature sensor may be wireless, communicating with the controller via radio frequency; the user interface may be a mobile phone or web page.

1. *Sensors*: basic functioning of a thermostat requires at minimum a single room temperature sensor. Additional sensors could monitor humidity, outside temperature or additional inside temperature points, occupancy through infrared sensors, or connected to a security system that includes door entry or window sensors.
2. *Actuators*: the thermostat uses a switch or relay, whether mechanical or electronic, to turn on or off the target equipment, whether furnace, fans, or compressor for the air conditioning system. Other potential equipment includes an economizer, whole house fans, and a humidifier/dehumidifier.
3. *Control logic*: for simple thermostats, the control logic is simply a feedback loop that compares the target temperature with the

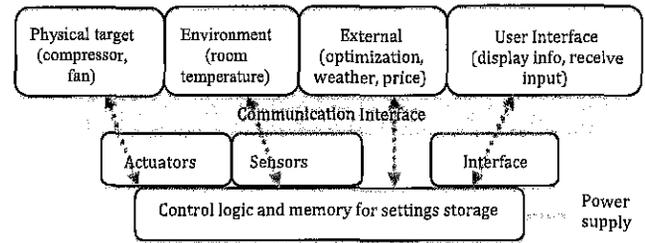

Fig. 2. Disaggregated components of a typical thermostat.

current measured temperature to determine when to turn on or off the equipment. Mechanical thermostats handled this, plus anticipation (to prevent overshooting the target) and hysteresis (a deadband of temperature typically ± 1 °F around the target temperature to prevent frequent switching of the equipment). Modern programmable thermostats provide anticipation, hysteresis, as well as other features through electronics. Data is read from the settings, user interface, and sensors, and a set of algorithms determines when the system switches on and off.

4. *User interface*: the user interface (UI) represents a means for the user to provide input for thermostat control and view a display of information. The UI allows users to change the target temperature setting—and on programmable thermostats, input a schedule of changing temperature settings—while displaying information, such as current and target temperatures. The thermostat interface can be mechanical with slide bars, digital with push buttons, or digital with touchscreen. New interfaces include web interfaces, mobile interfaces, TV interfaces, audio, and remote controls.
5. *Communication interface*: at a minimum, a thermostat must communicate with the HVAC system, generally through wired connections. Additional capabilities require communication using various protocols; examples include connection with a home area network, receiving price or reliability signals, streaming local weather forecast, receiving control signals through an external optimization service, or communication with interval meters.
6. *Memory*: programmable thermostats require memory for data storage; memory can be permanent or volatile (i.e., disappears when power is disconnected). These data, such as time of the day and target temperature for each program, are needed for the thermostat control logic.
7. *Power supply*: modern programmable and digital thermostats require electric power for operation. Batteries or low voltage ac power from the heating or cooling equipment typically provide this power; electric heating systems commonly use line voltage

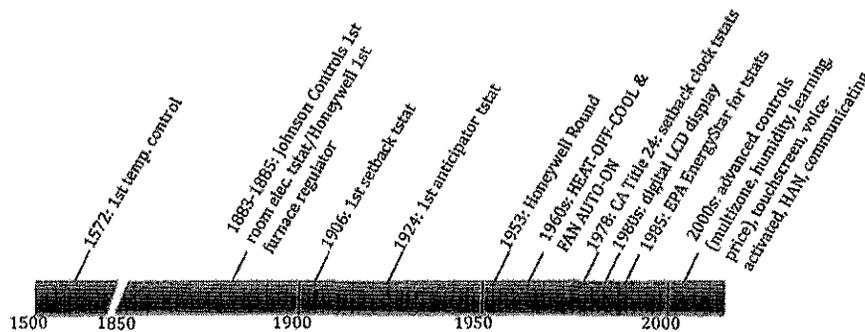

Fig. 1. Timeline of the history of residential thermostats.

power. Thermostats often employ both systems, using the batteries to preserve settings in the event of power outages or other failures.

3.1. Control features

Today's thermostats have a variety of features, both for control and the user interface, with different levels of sophistication. One range of features is related to *what* is under control. Thermostats typically control heating and cooling equipment, which can include forced air, radiant floor (typically using water) or radiant ceiling systems (water or electric), or radiators (typically steam). Some equipment, such as heat pumps, requires specialized control. Thermostats may also control related equipment, such as humidifiers/dehumidifiers, auxiliary heating systems, economizers, whole house fans, or other ventilation systems. High efficiency equipment often includes two stage systems with variable speed fans, which are controlled based on the difference in current and target temperature.

Another set of features of thermostats involves *where* the control lies. For example, a fan-delay relay at the equipment allows the blower fan to continue to run a few minutes after the compressor has turned off to take advantage of residual cooling. Some thermostats provide this control at the thermostat and allow adjustment of this time period. The anticipator, which turns off equipment before the setpoint is reached to prevent overshoot, may be adjustable (especially for heating) or not (cooling). Compressor protection, which requires the compressor to remain off for a few minutes minimum to protect equipment, is a typical feature often embedded at the HVAC controls.

A key issue is *how* these features work; some features with the same name (such as hold or recovery) have very different functions with different manufacturers. Some de facto standards have evolved, such as switches for heating/cooling mode (HEAT-COOL-OFF), auto switchover (automatically switch between use of heating and cooling equipment), and separate control of the blower fan (Fan-AUTO). For programmable thermostats, two push buttons to increase or decrease target temperature (as well as other functions) is fairly standard.

Some features have been driven by the EnergyStar program, such as default energy-saving and comfort setpoint temperatures and schedule, cycle rate setting, pre-comfort recovery, and hold and/or override options. Other policies, such as demand response dynamic pricing (described in [19]), are driving features such as communication and temperature setpoints that automatically respond to price. Other feature development is driven by increasing sophistication, such as multi-zone control, air filtering, and multi-stage HVAC equipment. While some thermostats do not indicate current time of day, programmable thermostats typically do—either

allowing an internal clock to be set by the user or providing a means of updating the time automatically.

3.2. User interface features

Another set of features relates to the user interface of the thermostat. These features are categorized by what is displayed and how it is displayed. Typical information to be displayed includes current and target temperatures (in Fahrenheit or Celsius), day of week, time (12 or 24 h), and current schedule control mode (e.g., morning, day, evening or night); some displays show outside temperature, relative humidity, and/or local weather forecast. System status is often displayed by the position of a switch, or text or icon. Status information includes:

- thermostat is off or in heating, cooling, or auto switchover mode,
- fan is off or in auto mode,
- heating or cooling system, fan, or backup heating system is currently running,
- hold/temporary/vacation mode is active (supercedes regular programmed schedule).

Another type of display is an alert, such as indication of a low battery or that the filter needs changing. Other types of information include help (e.g., tips, other information for easy set up, instruction manual), energy usage and or cost, messages from utility and/or current price tier.

The user interfaces of thermostats have evolved over time, both in how information is displayed and the means of user interaction. Early thermostats presented a needle-type marker that indicated current and target temperatures within a range of possible temperatures in an analog display (Fig. 3). The majority of programmable thermostats now use digital numbers to display temperature; some recent models have returned to numbers on an analog scale. Many programmable thermostats display text or numerical information on some sort of Liquid Crystal Display (LCD). The early models had relatively small monochrome screens that had space dedicated to specific information. In some models, a marker such as an arrow pointed to text (such as day of the week) printed on the plastic enclosure of the thermostat; the displayed marker changed position to indicate change in status or information. In recent years, the LCDs have grown larger, multi-colored, and screen space is shared—different information can be displayed in the same area at different times. Some thermostats use menus in a framework similar to personal computer interfaces to provide many layers of information structured on the same screen. Many programmable thermostats now have backlights for reading the LCD screen at night (Fig. 4).

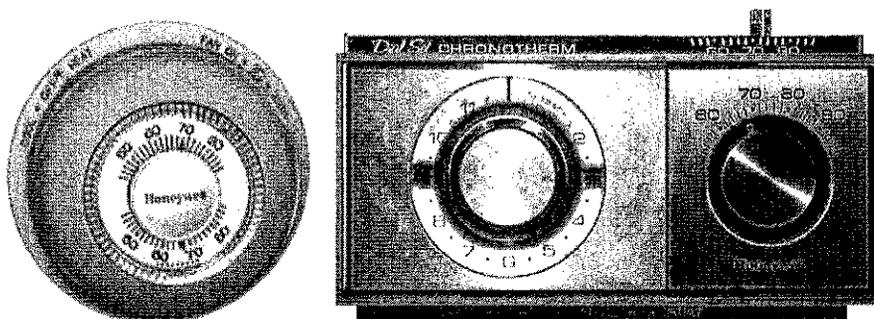

Fig. 3. Older thermostat designs with slider bars, dials, and analog displays; Honeywell Round [20] on left and Honeywell Chronotherm setback thermostat on right (photo by T. Peffer).

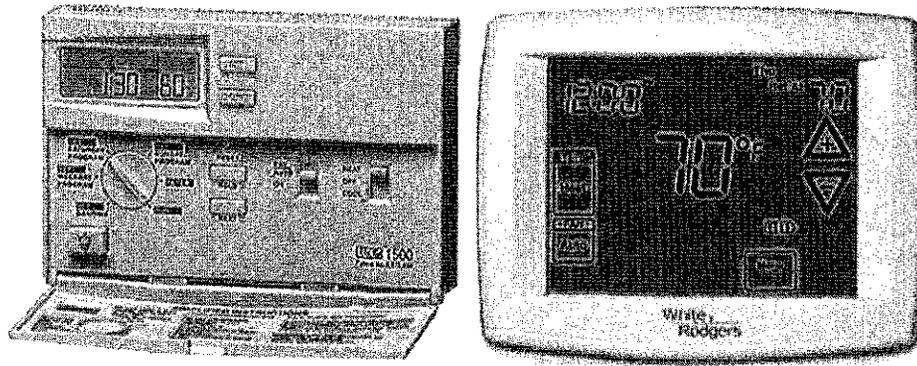

Fig. 4. The evolution of the programmable thermostat from small LCD on LUX 1500 [21] on left to full touchscreen on White Rodgers [22] on right.

The user interaction has changed from sliding needle-markers and turning dials to push buttons and even touchscreens on some models. While early models used push buttons to control a single use—up, down, hold, next, reset, clear—some thermostats rely on context-sensitive buttons, that is multi-use buttons that control different features in different modes. Physical slider switches are still commonly used, although in touchscreen and web interface models, these are replaced with a virtual switch. Other conventions borrowed from computer interfaces include using OK, Back, and Save buttons.²

Many thermostats have controls or settings meant to be used rarely and/or only at installation. These functions are often hidden from apparent view, such as locating the switch for temperature display in Fahrenheit or Celsius on the back of the thermostat. A separate installer mode might include setting cycle rate or temperature differential (deadband); these features may be only accessible via a specific sequence of button pushes.

Manufacturers are constantly offering new interfaces. Voice control thermostats allow a thermostat to be set up and controlled by spoken commands. Some thermostats offer the user a selection of multiple languages. Others provide great flexibility, such as custom names for various programmed schedules. Audible touch confirmation is a feature that imparts an audio prompt to confirm entries. Single button pushes allow easy program switches, such as changing to Daylight Savings Time versus Standard Time or changing to an occupied or energy-savings mode.

4. Thermostat ownership & usage

4.1. Thermostat ownership

We found data on thermostat ownership mainly from surveys. The Residential Energy Consumption Survey (RECS) is a national area-probability sample survey (about 4000 homes every four years) that includes several questions about presence, type, and usage of thermostats. The American Home Comfort Study (AHCS) also surveys 30,000 homeowners every two years; the 2008 survey was conducted via the Internet. About 86% of U.S. homes have a thermostat of some type controlling heating and/or cooling systems [24,25]. Over time, the penetration of programmable thermostats has increased in response to codes, decreased costs, needs for additional features (e.g., central air conditioning), and the desire to save energy. Building codes and other efficiency programs have accelerated the transition to programmable units.

Currently, about a third of U.S. homes have programmable thermostats [24,25]. The exact saturation is difficult to determine because the estimates rely on consumer responses to surveys. Consumers do not universally understand the distinction between the types of thermostats even though manual and programmable thermostats have very different capabilities. While two major categories of thermostats—manual or programmable—are generally recognized, several surveys have indicated that lay people do not understand these terms. Manual thermostats—those that require human intervention and have no automatic features—are often called standard or mechanical. However, manual thermostats can have digital displays and operate with electronic sensors and switches instead of mechanical ones. The early setback or clock thermostats look like manual thermostats with their analog displays, but they are categorized as programmable thermostats, since they can automatically change temperature based on a timed schedule. In both the national RECS and California-based Residential Appliance Saturation Survey (RASS), the authors noted problems with people understanding the term programmable thermostat [1,26]. In RECS, the authors noted that when a clarifying phrase was added to the question regarding type of thermostat, the number of households reporting a programmable thermostat nearly dropped in half compared to the previous survey, from 44.9 million in 1997 to 25.1 million in 2001 [27]. RASS noted that the numbers listed were lower than expected, that is, the response rate regarding programmable thermostats in post-1995 houses was expected to be 100% due to the energy code, but was underreported.

Although programmable thermostats have been available for more than 30 years, only 30% of U.S. households have installed them. In the 2005 RECS, 14% of U.S. households reported having no thermostat, 30% (34.6% of thermostat owners) had a programmable thermostat, and 56% had a manual thermostat [1]. According to the AHCS, 36% of households had programmable thermostats in 2004, and the percentage increased to 42% in 2008 [28]. In California, the 2005 RECS reported 19% of households with no thermostat, 44% (54% of thermostat owners) with a programmable thermostat, and 37% with a manual thermostat [24]. The percentage of houses in California without thermostats differs from the national percentages due to milder weather, whereas the increased number of programmable thermostats in California versus nationwide is likely attributed to the last 30 years of energy code requiring a setback or programmable thermostat. Of those that used central air conditioning in California, 68% had programmable thermostats; this most likely reflects the fact that homes built in the past 30 years were more likely to have central air conditioning (Fig. 5). Another survey conducted in Seattle, the Residential Customer Characteristics Survey 2009, reported that programmable thermostats were installed in approximately 51% of households [29].

² We note that Honeywell holds a patent on the saving changes indication, which poses a constraint on other thermostat designs [23].

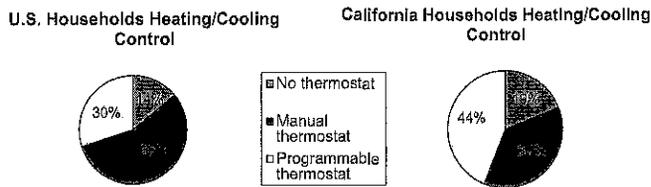

Fig. 5. Thermostat type in United States and California [1].

Thus, residential energy use (and savings) still depends largely on the settings of manual thermostats by the owners. This fraction will fall steadily in the next decade as older thermostats are upgraded through weatherization programs, utility incentives, and consumer initiatives to achieve energy savings and more features.

4.2. Thermostat usage patterns

Several studies show that programmable thermostats are set and programmed differently than manual thermostats. In a home with a programmable thermostat, the occupants can program a schedule to change the target temperature or setpoint. During the heating season, the temperature setpoint can be reduced (“set back”) when the house is empty or at night; in the cooling season, the temperature setpoint can be increased (“set up”) to prevent operation of the cooling system when not needed. In the 2005 heating season, about 60% of U.S. households with programmable thermostats reported using them to reduce temperature at night. Only 45% reduced the temperature during the day; the same survey indicated that approximately 51% of homes have someone home all day, which may explain why fewer households reduce temperature during the day than during the night [25]. During the cooling season, 55% of households with programmable thermostats set them to increase temperature at night as well as during the day [24]. According to the California 2003 Residential Appliance Saturation Survey (RASS), only 28% of households in California actively set up the temperature for air conditioning (AC) during the day, and the presence of programmable thermostats did not appear to dramatically affect setback behaviors [26]. Of the recent buyers of HVAC equipment, the American Home Comfort Study (AHCS) reported that 56% of homeowners always program their thermostats, 32% sometimes program, 9% never program their thermostats, and 3% do not know how [28].

In a study that compared the energy consumption of manual thermostats versus programmable thermostats in CA households, programmable thermostats were set slightly higher (i.e., 0.7–1.2 °F) than manual thermostats in the cooling season (which would save energy), but were not in OFF mode as often. In the heating season, programmable thermostats were set at higher temperatures than manual thermostats (which would cause more energy use), and far fewer were placed in OFF mode than manual thermostats [30]. A consumer survey conducted in Seattle revealed that a night setback was adopted by 86% of people with programmable thermostats and only by 60% of people with manual thermostats [29]. A study in California found that setpoints assumed in Title 24 energy code compliance software (similar to those required for EnergyStar eligibility) overestimated the cooling setpoint and underestimated the heating setpoints; in other words households in the study on average used a lower setpoint for cooling (used more energy) and a higher setpoint for heating (used less energy) than the default energy-saving setpoints [31].

Similarly, outside the U.S., setup and setback behaviors are not a common habit, as reported in several international studies. A cross-cultural study of energy behavior in Norway and Japan [32] reveals that less than 50% of Oslo’s households setback temperature at night

and 28% did not lower thermostat settings during weekends or vacations. Another northern European survey of 600 homes [33] showed that only 38% of the houses with thermostats lowered their temperature during the night.

Occupants regularly interrupt the programming of their programmable thermostat by selecting operating modes that suspend the programmed schedule: *hold* and *override* (sometime called temporary hold or temporary override) mode. *Override* allows the occupant to temporarily raise or lower the desired temperature typically until the next scheduled time program. The *hold* mode is a permanent change, and functionally transforms the programmable thermostat into a manual thermostat. A study conducted by thermostat manufacturer Carrier examined the operating mode of installed programmable thermostats in households within the jurisdiction of four utilities, LIPA, ConEd, SCE, SDG&E. Of the 35,471 thermostats monitored overall, only 47% were in program mode, in which the thermostat used the schedule previously input by the occupant to control temperature setpoints. The rest—53%—were in hold mode. The households within the two southern California utilities (SCE and SDG&E) showed a higher percentage (65%) in program mode, although it was unclear why [34]. In the AHCS, no distinction was made between override and hold. One question asked about the frequency of overrides for recent HVAC buyers (all the time 8%, often 12%, sometimes 36%, rarely 35%, never, 9%) [28]. It is difficult to know whether overriding “all the time” means the thermostat was in hold mode or not.

Several studies have examined temperature swings, comfort, and control within homes [31,35–39]. These indicated that thermal comfort preferences at home are very different from that in offices: there is a wider temperature range, because of greater control (i.e., occupants opened windows, and had greater freedom to change thermostat settings, clothing, and activity level) [40] and because of costs [41]. A recent national survey found that 49% of homeowners were very much satisfied with their home comfort systems, 43% somewhat satisfied, and 8% not at all satisfied [28]. There was a slight correlation between programmable thermostats and satisfaction: 45% of those very much satisfied had programmable thermostats compared to 32% of those who were not at all satisfied [28]. A preliminary study indicated that socioeconomic class may affect these responses: in a recent weatherization study by one of the authors (Meier) in low-income households, the top two complaints were mechanical ventilation and the programmable thermostat. However, thermal comfort throughout the home tends to be problematic—68% of homeowners found at least one room too hot in the summer and 60% found at least one room too cold in the winter [28]. When asked about seeking improvements to their home comfort system, 89% of homeowners listed greater energy efficiency as very important, but many listed issues with thermostat as very important as well: more even temperature (65%), better temperature control (68%), faster heating and cooling (64%) [28]. Other issues were listed as very important—such as better air purification (76%), improved air flow (69%), and better humidity control (64%) [28]. However, most commercially available thermostats (the main device to affect house thermal environment) control only air temperature, leaving all other parameters unmonitored and uncontrolled.

There are no set standards for thermal comfort in residences, although New York rental housing has a minimum indoor temperature requirement for the eight coldest months of the year [42]. A few have suggested the Adaptive Comfort Standard described in ASHRAE 55-2004 as an appropriate standard [40,43] since houses by law have operable windows for ventilation; this standard allows a wider comfort temperature range given the occupants’ ability to adapt. Thermal comfort has been defined and studied both in the lab and field, primarily in the commercial sector

[44–49]. Many factors have been found to influence thermal comfort, such as air temperature, radiant temperature, air speed, humidity, level of clothing/activity [44,50,51] as well as psychological, behavioral, and physiological influences [52–56]. These may explain the difference in heating and cooling season temperature offsets [57]. In general, comfort temperatures have been increasing in winter and decreasing in summer over the past several decades [58,59]. Several studies indicated control as a major issue in thermal comfort at home [35,38,40,60]. However, most of the thermal comfort testing and surveys in residences have suffered from small sample size and not been representative of all socio-economic and demographic classes; even surveys such as AHCS, RECS and RASS still struggle with definition of terms (e.g., programmable thermostat, setpoint, zones).

5. Energy savings from programmable thermostats

Programmable thermostats have been promoted (and mandated) as a means of saving energy. But programmable thermostats differ from the traditional conservation measures, such as insulation or a more efficient refrigerator, where simply installing the measure will save energy. In contrast, the occupants must actively program the thermostat and select settings that result in savings. Furthermore, observing the programmable thermostat-induced energy savings is experimentally difficult since energy savings cannot be observed directly; instead one must examine the *difference* in energy use between two periods. Few studies directly meter the gas for heating or electricity for cooling separately from other appliances. In addition, the differences in energy use may be partially attributable to differences with other appliance energy use, seasonal weather variations, or changes in occupants or economic conditions. Alternatively, one can measure the difference in energy use between similar homes with and without programmable thermostats. This approach is sometimes simpler but introduces other kinds of uncertainties. Perhaps these difficulties in evaluations explain why field studies of thermostat savings have shown mixed results.

One recent analysis of energy bills in about 7000 households concluded that savings of about 6% in natural gas consumption could be attributed to programmable thermostat use [61]. In Quebec, 90% of houses are electrically heated with room thermostats; a billing analysis study (more than 25,000 households) estimated that the use of programmable thermostats reduced the energy consumption by 3.6% [62]. In a survey conducted in Seattle with 2300 respondents, houses with programmable thermostats had on average a 9% reduction in electricity consumption [29]. Studies of cooling energy savings are less common.

Several field studies showed no significant savings in households using programmable thermostats compared to households using non-programmable thermostats [30,63–65]. Some of these studies are summarized in Table 1. The availability of a programmable thermostat did not change setback behaviors: people who were accustomed to setting back with a manual thermostat kept doing so, and did not increase their energy savings. Those who had not previously changed the temperature setpoints did not set back with programmable thermostats. Some researchers argued that homes relying on programmable thermostats consumed more energy than those where the occupants set the thermostats manually [66], especially with heat pumps [67].

The EPA reviewed these studies and concluded that consumers were not using programmable thermostats effectively due to programming difficulties and lack of understanding of terms such as setpoint [69]. As a result, the EPA discontinued the EnergyStar programmable thermostat program in December 2009.

Table 1
Summary of thermostat behavior and energy savings studies [68].

Organization	Investigators	Location & year	Sample size	Conclusions
Southern California Edison	Paul Reeves, Jeff Hirsch, Carlos Haiad	CA 2004	N/A	Energy savings depend on behavior and can be + or –
Energy Center of Wisconsin	Monica Nevius, Scott Pigg	WI 1999	299 Homes	No significant savings. PT's don't change behavior.
Connecticut Natural Gas Corporation	David Cross, David Judd	CN 1996	100 Homes	PT's cause no significant behavior change.
BPA/PNNL	Craig Conner	NW 2001	150 Homes	No significant behavior change/savings.
Florida Solar Energy Center	Danny Parker	FL 2000	150 Homes	No savings, some increases.

6. Usability issues

Programmable thermostats have not seen great market penetration; only about half are actually programmed to adjust temperatures at night or unoccupied times, and thus they do not necessarily save energy. The EPA review and other studies indicate that people find programmable thermostats difficult to understand, and lack the confidence and motivation to overcome difficulties in programming [64,70–74].

We recognize that there are many factors involved in people adopting and using a new device that are applicable; here we discuss Rogers' technology diffusion theory, Nielsen's factors of system acceptability, and usability guidelines.

Rogers' diffusion of innovation curve (Fig. 6) defines different attributes that affect the willingness and ability of consumers to trying new technology [75]. Rogers' theory describes why seemingly advantageous innovations, like the programmable thermostat, can take some time to diffuse in a social system. In some cases, policy has created a tipping point in driving adoption, especially between early adopters and the early majority; this has certainly been the case in California's higher adoption of programmable thermostats compared to the rest of the U.S.

Jakob Nielsen outlines factors in system acceptability, in Fig. 7. This figure is targeted for web interfaces, however, we feel it is applicable since thermostats are becoming more like other consumer electronics.

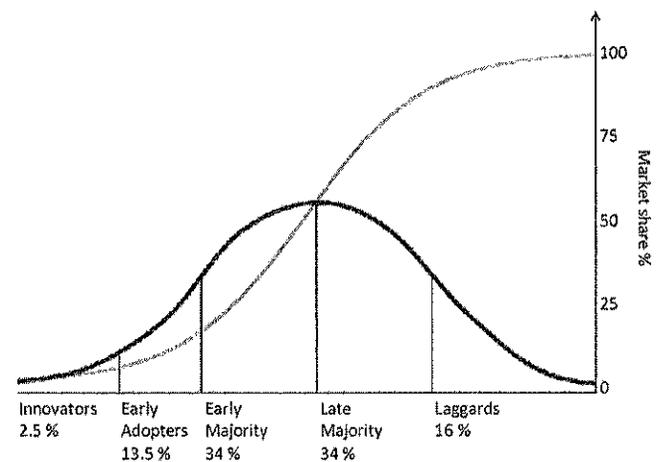

Fig. 6. Rogers' technology adoption or Diffusion of Innovation Curve [75].

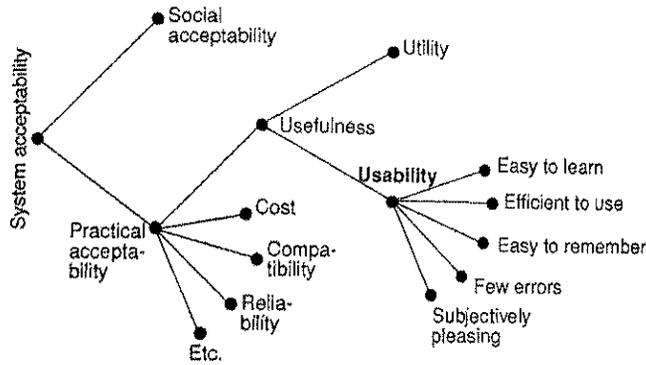

Fig. 7. Nielsen's factors in system acceptability [76].

In the International Organization for Standardization (ISO) Guidelines on Usability (ISO 9241-11 1998), usability refers to the extent to which a product can be used by specified users to achieve specified goals with *effectiveness* (the accuracy and completeness with which users achieve specified goals), *efficiency* (the resources expended in relation to the accuracy and completeness with which users achieve goals) and *satisfaction* (freedom from discomfort, and positive attitudes towards the use of the product) in a specified context of use [77]. In this section, we focus on some of issues mentioned in the literature on the use of programmable thermostats.

Our review of several U.S. and European studies collected a list of complaints and unexpected beliefs held by users on thermostats. Misconceptions about both energy and thermostats affect the use of thermostats, which arguably can be categorized under *social acceptability* in Nielsen's framework. Some people feel that heating all the time is more efficient than turning the heat off; in other words, they feel that turning down the thermostat for several hours per day actually consumes more energy because of the energy needed to heat the house back up to the comfort temperature [64,70]. Several studies have reported that consumers do not understand how their HVAC system works [36,78–82]. They may have incorrect mental models about creating comfortable indoor air temperature, especially since thermal feedback is delayed due to thermal inertia of the house. For example, they may think of the thermostat as an on–off switch or they may think the thermostat works as a valve: to accelerate heating, one must set the thermostat higher [80,83]. Many consumers do not know how much energy heating and cooling their home consumes or costs [70]. Other social acceptability issues may relate to priority of values: consumers may care about the environment, but value their comfort more [81,84]. In some cases, discomfort in entering a cold house discouraged people from lowering the temperature when they are away during the day [33]. In fact, in some countries a warm house is cozy and socially recognized [32]. Other social issues include gender differences in thermal perception or different needs and schedules of people in a household that make it more difficult to find agreement on the programmed temperature [53,54,80,81,85,86]. While some studies indicate residents found comfort in “fiddling” with their thermostats [35,60,87], other studies found that most people do not have interest in tinkering with their thermostats to optimize performance [38,78,88–90]. Other issues that are social in nature include a fear of the unknown: some people unfamiliar with a thermostat are afraid of using it in case there are terrible consequences [64,80,81,88].

The *practical acceptability* and *satisfaction* of using a programmable thermostat has many factors. Programmable thermostats cost more than manual thermostats, and consumers must expect

enough value or *usefulness* (whether convenience, cost-savings, or some other *utility*) to warrant the time and money to purchase and install the new device. At least one study suggested that the payback and convenience are not worth the cost [64]. Other practical concerns include compatibility with the current system; there are a few anecdotal reports of people mounting their new programmable thermostat sideways to match the “footprint” of the old manual thermostat so they wouldn't need to repaint the wall. A few studies mention that the programmable thermostat was located in an inaccessible location [80,81]; many are located in hallways that are poorly lit. Current ADA standards require the placement of the thermostat 48 in. (1.2 m) above the floor which may be more usable for those in wheelchairs, but less usable for others than the 60 in. (1.5 m) de facto standard. In addition, many houses have alternative heating or cooling systems (e.g., woodstoves) not controllable by thermostats [64,81]. While many people have predictable schedules, others' schedules are more variable which makes the programming useless [64,81].

The poor *usability* of programmable thermostats and the necessity to improve their ergonomics was highlighted almost thirty years ago by Dale and Crawshaw, who stated that “it is easy to blame them [thermostat users] for stupidity, but is slowly being realized that the problem of efficiency in practice properly belongs to the engineers or the system designers” [91]. A report from 1982 illustrating the application of human factors techniques to heating controls interfaces listed several flaws, such as small text size and knobs, difficulties reading in poor lighting and distinguishing the current mode of the device, and lack of feedback on programming [92]. Although the technology of the interfaces has greatly improved over the past decades, little has been achieved in overcoming these problems.

One important aspect of usability is learnability: is operation of the device *easy to learn*? The EPA review and many other studies indicate that programmable thermostats are too complicated to use [33,64,71,73,74,80,81,83,93], especially for the elderly [73,81,88,94,95]. A consumer reports lab test stated that the subjects had difficulty setting the current time and day [71]; other studies indicate problems with programming desired temperature and schedule [33,64,81,94]. Several studies report that buttons and/or font size of text are too small [71,81,89,91,92]. Other studies point to poorly understood abbreviations (e.g., “Clk” for clock, “Prg” or “Prog” for program) and terminology (e.g., set-point, program, default, zone) and confusing lights and symbols or icons [38,80,89,91,92].

Another aspect of usability is *efficiency*: how many steps does it take to achieve the objective? Boait and Rylatt reported the example of a thermostat that required a total of 28 steps to enter heating times, which were identical for each day of the week [74]. Freudenthal and Mook observed that programmable thermostat owners do not use all functions, even the ones they find valuable, due to poor interface design [94]. Several studies suggested that the layout of the interface itself was illogical, and thus difficult to navigate [89,91,92].

Since many thermostats at minimum require seasonal adjustment, the *easy to remember* factor of usability is important. Some thermostats have help or have a quick guide located on an inside cover. But many programmable thermostats require a manual, which can be 100+ pages long and are often unavailable when needed. Of the manuals themselves, Rathouse and Young reported that many people find them too technical, detailed and wordy, with not enough diagrams and attention on basics with procedural step-by-step instructions [81].

Another measure of usability is *few errors*. In a recent study in progress by one of the authors, Pritoni, nearly a fifth of households reported that the current time on their programmable thermostats

was incorrect by more than an hour. Poor feedback in setting a program was listed in a few studies as leading to errors [80,92].

We only found one study that addressed the aesthetics of the programmable thermostat (is it *subjectively pleasing?*) as a barrier to usability [17]. Anecdotally, one author has heard many complain of the lack of aesthetics, especially in the vein of, "it just looks complicated, I don't want to touch it."

7. Discussion

Programmable thermostats have largely fallen short of the goal of saving consumers energy. Some research suggests that improving usability may increase use and adoption of programmable thermostats towards facilitating energy-saving behavior. This section describes what usability testing has been done and what more is needed as well as describing what new features may help usability.

7.1. Usability testing

Although a wide range of studies has been conducted on temperature settings, thermal comfort, and efficiency of HVAC systems, little quantitative information is available on how people deal with temperature and environmental controls. A few researchers have performed quantitative usability tests on programmable thermostats.

Karjalainen completed qualitative and quantitative surveys on thermostat use in homes and offices in Finland, and then developed a prototype thermostat interface with usability guidelines and a user-centered design approach [80]. As an example of user-centered methods, six focus groups were conducted in the UK [81] to investigate issues in use of heating controls. Based on user experiences and complaints, a series of recommendations for manufacturers and installers was formulated to improve the next generation of thermostat interfaces, including the recommendation that manufacturers offer a variety of products of different complexity to suit different needs.

Freudenthal and Mook [94] developed a programmable thermostat interface with vocal messages that guide the users through the programming steps, in order to provide an interface usable for people with no knowledge of the device, even for elderly users. The device usability was tested by videotaping the interactions with a touchscreen computer of 14 people randomly selected among the population of Delft.

Sauer et al. investigated various types of enhanced user support (status, history, predictive, instructional and warning displays) on user performance [95]. Seventy-five subjects were asked to evaluate them. The highest scoring interface was the predictive display, which predicted the impact of heating setups on certain parameters, such as energy consumption, efficiency, and comfort level, thus helping users make informed decisions [95]. The more interactive and rich information displays (e.g. warnings) appeared to be useful for less experienced people. The results of this study suggested that different levels of support were appropriate for specific situations and groups of users.

A recent publication by the UK Building Control Industry Association [96] focused on the implementation of user interfaces of control devices for heating, cooling, and ventilation, analyzing the flaws of existing interfaces and providing usability guidelines for new products. The authors affirmed that usable controls improved not only user satisfaction and comfort, but also they provided higher energy efficiency (use of HVAC only when needed), helped to building management (local control versus central control) and provided users with faster response of the system (due to perceived control and feedback).

To our knowledge, the only comparative usability study on commercially available programmable thermostats was conducted by Consumer Reports [71].³ Twenty-five different thermostats were lab-tested to assess their energy performance and their usability. As a result, programmable thermostats were ranked according to these criteria and a series of problems with using thermostats were highlighted. Consumer reports did not explicitly state what parameters were considered to assess thermostat usability, and it did not appear that quantitative tests were performed. Moreover, the thermostats were tested in unusual conditions; namely, the users evaluated the thermostats while sitting down and in a well-illuminated room.

7.2. Recommendations

What features might increase adoption and usability of programmable thermostats? We discuss below some recommended features listed in the literature, as well as standards. The current trend in consumer electronics may help thermostat usability. Certainly adding thermostat functionality to existing interfaces, such as on the television or smart phone, may improve the use and usability. While home automation has been around for many years, perhaps today's more compelling interfaces will encourage consumer acceptance of automation and intelligence in home controls. Educating consumers with better feedback may encourage programmable thermostat use, by revealing how much heating or cooling energy homes consume and how modifying the temperature setpoint can save energy.

Improved feedback: recently energy consumption feedback has received a great deal of attention [97–108] with respect to changing energy consumption behavior. Cost and energy consumption data can be obtained from interval meters, user-installed sensors on meters or appliances, smart appliances, and other intelligent systems. This information can help users understand the connection between temperature settings, HVAC use, cost, and the environment. Some recent studies indicate that the estimated time expected to reach the selected temperature is a useful indication for users [17,80]. This feature may also enhance the users' perception of control of the system and discourage the use of the thermostat as if it were a valve.

Intelligent systems: automated systems can, in theory, limit the need for human interaction, such as eliminating thermostat programming by systems that learn occupancy schedules and thermal preference. Different solutions have been suggested to monitor the location of household members ranging from occupancy sensors [57,109–112] to Mobile GPS [17]. Occupancy data can also be predicted from historic energy consumption [74]. Sensors can be complemented by an intelligent controller that uses learning algorithms to recognize patterns (e.g., preference in temperatures and characteristics of HVAC and house) [57,74,113]. Intelligent systems can theoretically overcome some of the problems associated with human-thermostat interaction, although some users may be reluctant to surrender control. Clearly the optimal path is to provide choices in the balance between user control and automated features [57].

Communication: the thermostat can use a home gateway to communicate with other devices in a Home Area Network such as smart appliances, in home energy displays, and energy detectors. A thermostat could in theory exchange data with utilities and other service providers. Web/mobile interfaces already enable the control

³ While programmable thermostat manufacturers affirm they perform usability tests for their products, they do not disclose results because they consider the user interface a key feature for sales.

of thermostat configurations from personal computers, cell phones, and potentially Internet-connected television. Enhanced communication with other devices in the home and with the outside world may increase thermostat usability by piggybacking on other devices with more interesting and provocative user interfaces that are easy to use.

Other improvements: voice-controlled thermostats, such as by Talking Thermostats.com and Innotech, may improve thermostat usability for elderly or motion-disabled people [114,115]. Voice-activated devices could dramatically simplify the interaction with thermostats, especially in case of out-of-schedule requests [81]. Some researchers have proposed the development of goal-setting strategies for occupant interactions with programmable thermostats [85]. Some studies have suggested new functions considered useful to consumers. One is a “boost button” (an additional hour of heating or cooling) [81], similar to the plus-1-minute button commonly found on microwave ovens. This function could provide flexibility to a programmed schedule; in other words, a single button press could extend the space conditioning to accommodate an impromptu change in schedule. In the same vein, another potential function is a timer [90] to turn on or off heating or cooling for a specific amount of time. A third helpful function is an estimation of the time needed to reach the desired temperature [80]. These features are not currently available in any of the surveyed U.S. thermostats. In response to demands to simplify the interfaces, a single button push triggering an energy-saving mode has been proposed in EnergyStar Program Requirements. Aesthetically improved interfaces are suggested by several studies to improve social acceptability and increase likelihood of adoption. Another area of improvement is motivation: the “Green Machine” [116] is a mobile application that is an example of *persuasive technology*—defined by BJ Fogg as technology created for the purpose of changing people’s attitudes or behaviors [117]. The Green Machine interface provides a visualization of energy consumption in comparison to user goals and utilizes social networking to motivate users to reduce their energy consumption.

In the long term, standardization can improve usability, because people have to learn a system only once. In our survey of thermostats currently available in the market we found a substantial lack of standardization not only in the interaction design, but also in symbols, icons, and text. The most basic functions and concepts are implemented in different ways. Standardization of interfaces, symbols, and icons has been successfully implemented in other sectors such as in car dashboards (SAE Standards [118]) and in power controls for electronic equipment (IEEE 1621 [119]).

7.3. Future work

We suggest that a “good” thermostat design is not only usable (easy to use/learn/remember), but also useful (provides needed functions for its users) in a way that is cost-effective and compatible with existing equipment. Arguably, a good programmable thermostat would facilitate energy-saving behavior as well as provide comfort and convenience for the people using it. But do thermostats really save energy? What else factors into their adoption and use? And what is good usable design? To whom?

We recognize several needed areas of research. Additional research is needed to determine the energy savings from programmable thermostats and link the amount of savings to initial conditions and usage of the thermostat’s features. In addition, we uncovered little exploration of thermal comfort in homes; this is well studied in commercial buildings and has led to better control strategies. Understanding residential thermal comfort could improve comfort and save energy. Another issue entirely is addressing motivation to use the thermostat to save energy. Are

there softer non-technical means of achieving the same goals, for example, with social networking with Facebook or encouraging behavior change by promoting positive social norms in utility bill inserts?

At the beginning of this section we listed the few quantitative usability studies we could find. While a few surveys and some studies point anecdotally to widespread user difficulties with programmable thermostats, the literature contains relatively few usability studies with quantitative data and analysis. (Access to the thermostat manufacturers’ consumer telephone help lines would be invaluable.) Lack of usability studies is a critical weakness in the design of advanced thermostats because usability is among the most frequent complaints about them.

We have begun some initial exploratory usability studies which are described in [120]. We think that there is not a “one-size fits all” solution; we are exploring the elements of good thermostat design, and are currently outlining design principles of programmable thermostats. While we briefly mention technology adoption theory and guidelines for web user interface design in this review, we plan further research to look at usability in other fields, such as medical equipment and dashboards.

8. Conclusion

Thermostats play a vital role in both providing comfort to people in their homes and controlling the most energy intensive systems in the home—heating and cooling. This review began with a brief history of the thermostat, outlined the basic features, discussed ownership and use of manual and programmable thermostats in the U.S., described the energy savings—or rather lack thereof—and pointed out usability issues. Our review of thermostats indicates that the thermostats designed and promoted by energy conservation policies have had slow penetration into the market and are used as designed in only half of the homes in the U.S. In general, the energy savings from using programmable thermostats are less than predicted, although we acknowledge that these evaluations are difficult to perform.

The number and variety of new features for programmable thermostats is increasing, which further complicates the device. One example is the programmable communicating thermostat for residential demand response. Many utilities are exploring time-varying price tariffs to reduce peak electricity demand—driven primarily from space heating and cooling. Yet, overlaying price-response on the current functionality of programmable thermostats will only increase the complexity of this already misunderstood and underutilized device, much less introduce a tariff structure completely foreign to many consumers.

User complaints culled from the literature include misconceptions about energy use and how thermostats work, lengthy and obtuse operating manuals, and social and practical barriers to using programmable thermostats. The user misconceptions are particularly important since they may encourage incorrect usage that cannot be easily overcome by better interfaces. When users complained about the thermostats themselves, they noted in particular their complexity, small size of buttons and text, confusing terms and symbols, and the number of steps needed to program the devices.

Several studies indicated disparate attitudes towards thermostats. Some users preferred never to adjust their thermostats—to the point of being afraid of touching them; some believe that changes in thermostat settings consume more energy. Others tinkered with their thermostat several times per day, and prefer the control of manual adjustment to a set program. These groups will have different priorities for top-level features.

Our recommendations for improved usability include access through a web portal and use of audible commands and even voice

recognition. The literature revealed some functions that would be desirable to some users but are not available in U.S. models, such as a “boost” feature that would provide an extra hour of operation (similar to the “plus one minute” feature on a microwave oven). One study found that users liked a feature that would indicate how long it would take to achieve the desired temperature.

A goal of future thermostats will be to overcome the misconceptions about thermostat operation and to minimize the number of interface-related complaints. At present, however, designers lack the foundational research to determine which thermostat features succeed or fail. We are encouraged by EnergyStar’s inclusion of usability metrics in the future thermostat specification and hope that this effort leads to more quantitative usability research as well as building on the success of intuitive popular consumer electronics.

Finally, we note that the thermostat is only one of many devices where human interaction plays a role in energy consumption. We expect a similar discourse in the future on in-home energy displays, lighting controls, as well as household appliances (such as televisions) that focus on making energy consumption more transparent and user interfaces more usable.

Acknowledgements

We wish to thank Jessica Granderson, Dhawal Mujumdar, Becky Hurwitz and Margarita Kloss for their contributions, Bruce Nordman for providing comments and input on a review draft of this study, and Iain Walker, who was a co-author of an earlier report from which we drew. In addition, we thank the California Energy Commission for early support through a closely related project.

We gratefully acknowledge the support of the Office of Energy Efficiency and Renewable Energy, Building Technologies Program, of the U.S. Department of Energy under Contract No. DE-AC02-05CH11231.

Re: 2010 Thermostat Recycling Corporation's Annual Report

Dear Ms. Batarseh:

Attached is TRC's 2010 annual collection report for the Department. To the extent practicable TRC has made its best effort to be responsive to the Department's request for expense and collection data. A copy of this report will be posted on TRC's website at www.thermostat-recycle.org.

TRC would like to take the opportunity to summarize some of its major accomplishments in 2010.

- Notwithstanding continued economic challenges to the HVAC industry, the national recovery of thermostats increased by 29 percent, diverting almost 1,900 pounds of mercury from solid waste.
- Industry participation in TRC continued to grow and by the end of the year TRC represented 29 manufacturers that historically branded and distributed mercury switch thermostats.
- TRC continues to see substantial growth in access to the program, adding over 700 new collection locations in 2010. TRC saw solid growth in all collection location types in 2010.

TRC is now in its second year of the mandatory program in California. TRC saw a 77% increase in the number of intact mercury thermostats recovered through the program in California. TRC collected 13,340 whole thermostats in 2010 from California locations. Only one state, Maryland, had higher collections last year.

Looking towards 2011, we are looking forward to the continued expansion of the program and are always open to discussing strategies to help build the program.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", is written over a horizontal line.

Mark Tibbetts
Executive Director

2010 Thermostat Recycling Corporation Annual Report

Collection Data

Table 1: 2010 California Collections by Brand

	Count Whole Hg Thermostats	Count Hg Switches
Honeywell	9,478	18,424
White Rogers	1,624	2,314
GE	89	255
Bard	86	294
Burnham	0	1
Carrier	578	1,844

Trane	153	383
Uponor	0	0
Valliant	0	0
WW Grainger	8	11
York / JCI	43	117
Total Member Product Recovered	13,083	25,190
Orphan Waste	257	4,778
TOTAL	13,340	29,968

TRC recovered 185.8 pounds of mercury from 13,340 intact mercury thermostats and mercury switches from California collection locations in 2010. This is an increase of 77% over the 7,542 intact mercury thermostats collected in 2009. California ranked second among the 46 states from which TRC recovered thermostats in 2010.

Waste Mercury-Added Thermostat Management

Bins with waste mercury-switch thermostats are received at the fulfillment/processing center in Golden Valley, Minnesota. The facility is owned and operated by Honeywell International under contract with TRC.

Bins are received at the loading dock and sent to the TRC processing area. The bin and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name, city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The bin is returned to the business that sent it in with a new prepaid address label within 72 hours of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The containers are returned from the storage area to the TRC processing area to have the mercury switches removed from the plastic

housing. Universal Waste Regulations require the disposal of waste within 12 months of generation. TRC's processor requires that the disposal occur within 6 months of generation and TRC follows the more stringent requirement. Small quantities of thermostats are removed from the container, which is then closed again, and placed at the switch removal workstation on a tray that contains any potential mercury spillage. The switches are removed from the thermostats and placed into a 2 quart container at the work station. In the event that a switch breaks and mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean up and disposal of mercury. TRC processing area is equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

The 2 quart container is emptied into a special 55 gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are drawn away and vented when the drum is opened.

The 55 gallon drum is then shipped to Bethlehem Apparatus Corporation in Hellertown, Pennsylvania for final processing of the mercury switches. Bethlehem Apparatus meets or exceeds all local, state, federal and EPA regulations for the management of the product. Bethlehem's approvals for mercury recovery/recycling include:

- EPA - identification No. PAD002390961 (Bethlehem Apparatus Co., Inc.)
- EPA BDAT Requirement - satisfied by all recovery operations
- CERCLA (Comprehensive Environmental Response Compensation and Liability Act)
- Pennsylvania Department of Environmental Protection

The facilities' processing follows all EPA guidelines and regulations. TRC has a facility license from Hennepin County Minnesota for the operation of the TRC. Honeywell, Inc. has a Hazardous Waste Generator license from Hennepin County. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

Program Education and Outreach

TRC marketing and promotion efforts targeted key audiences in California. Our objective was to raise awareness of key components of California's mercury thermostat law and to affect recycling behavior of the generators of waste mercury thermostats. Below is a summary of activities and channels we utilized in support of this effort.

Wholesaler Recruitment/Engagement—TRC continued to engage wholesale distributors to ensure that they are aware of the 1) mandate to collect waste mercury thermostats in California, and 2) the availability of the TRC program as a simple, low-cost means of compliance.

Engagement with wholesalers took many forms (see below for information on specific activities by channel). Outreach included trade shows and industry meetings, direct outreach and

engagement of specific distributors, earned media through industry trade press, and paid advertising.

TRC expanded efforts with the Heating Airconditioning Refrigeration Distributors International (HARDI) trade association last year. HARDI members represent approximately 80% of the domestic wholesale market for HVACR equipment. Most significantly, in October, TRC and HARDI entered into a formal agreement to promote the TRC program to HARDI's members. Aspects of this agreement include the development of website content on mercury thermostat regulations and an annual award recognizing the contributions of HARDI member(s) to the program. TRC sent correspondence [see Appendix H(1) for a copy of correspondence] to the executives of all 450 HARDI member companies inviting them to meet with TRC staff at the HARDI annual meeting.

TRC attempted to engage with the American Supply Association both in writing and by phone [see appendix N for a copy of correspondence] as well.

HVAC Contractor Engagement (including utilities)—TRC joined the Institute of Heating and Air Conditioning Industries (IHACI) in April, 2010. IHACI is a non-profit trade association of contractors, manufacturers, distributors, utility firms, and related businesses actively engaged in the heating, ventilation, air conditioning, refrigeration, and sheet metal industries. TRC understands that IHACI is the largest HVAC trade association in California. TRC provided information on the California law and encouraged IHACI to inform its members on the need to recycle. This resulted in a number of articles on thermostat recycling in IHACI's Indoor Comfort News.

TRC engaged the California State Licensing Board (CSLB) and provided information on the California Mercury Thermostat Act for inclusion in CSLB's newsletter (see appendix M). Information on mercury thermostat recycling was provided to the California Public Utilities Commission and its staff. TRC provided similar information to the California Energy Commission [see appendix K and L for copies of the correspondence].

Retailer Engagement—TRC engaged with representatives of major thermostat retailers in 2010 to ensure they were aware TRC was open to their participation in the program.

Summary of Outreach by Channel

Local, Regional, and National Trade Shows—TRC attended and exhibited at the following trade shows relevant to California:

January 25-27: AHR Expo, Orlando, Florida. The largest national trade show for HVACR industry. TRC staff exhibited and promoted program to HVAC contractors, HVAC manufacturers, and HVAC distributors. The show had a total registered attendance of 44,000.

May 24-25: National Oil Heat Service Managers annual meeting and trade show, Providence, Rhode Island. TRC also sponsored the opening reception for additional visibility at the event.

June 23-24: National Town Meeting for Demand Response, Washington, DC. This was a two day event focusing on demand response and included both utilities and thermostat contractors. TRC exhibited at the event.

July 27-29: North American Hazardous Materials Management Association (NAHMMA) Annual Meeting, St. Pete Beach, Florida. TRC exhibited and also presented on the program.

September 23-24: Comfortech, Baltimore, Maryland. Comfortech is a national trade show for HVAC contractors sponsored by Penton Media, publishers of Contracting Business.

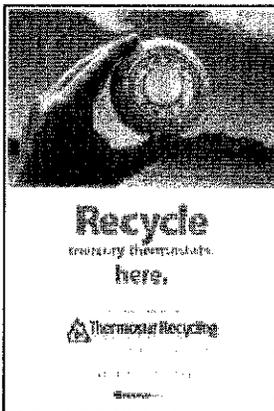

October 23-26: HARDI annual meeting, Houston, Texas. TRC exhibited at the event, which targets representatives of approximately 80% of the wholesale market for HVACR products.

November 17: IHACI Trade Show, Pasadena, California. TRC exhibited at the largest annual HVAC trade show in California. The show was sponsored by the Institute of Heating and Air Conditioning Industries Association. The one day show had a total attendance of over 3,600.

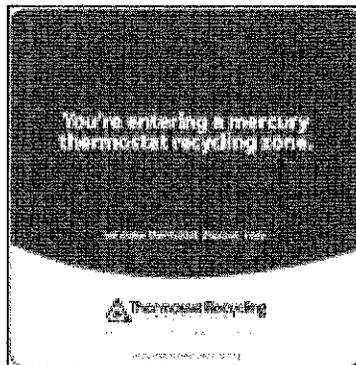

Program website—In October 2010 TRC launched a new website. The site updated and reorganized content; making pertinent information on the program to various audiences more accessible. The new website may be viewed at www.thermostat-recycle.org.

Promotional Took-kit—Concurrent with the launch of the new website, TRC added high-resolution templates of a number of promotional items. These items are free to use by TRC collection points. Developed for HVAC wholesale distributors, these items are available at no cost to TRC collection points to assist them in promoting the program to their customers. Items include a poster, bill stuffer, invoice template, cling sticker, banner, postcard, and print advertisement. Once the inventory of the current poster and window cling is used, TRC will replace those items with materials from the toolkit.

Advertisement

Earned Media

TRC sent letters to various stakeholders in California. They are as follows:

National Demolition Association (NDA): On May 4, 2010, TRC sent a letter to the Chair of the National Demolition Association's Environmental Committee as follow up to a phone conversation discussing TRC and NDA's promotion of the program [see appendix A]. The Chair presented information about TRC to the NDA's Board of Directors and ensured a link to TRC's website was included on NDA's website

American Public Works Association (APWA): On September 13, 2010, TRC sent a letter to eight California-based chapters of APWA to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix B]. The letter explained TRC's program and that participation is free for local governments.

Air Conditioning Contractors of America (ACCA): On September 13, 2010, TRC sent a letter to the West Coast chapter executive to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix C]. The letter articulated that all HVAC contractors were required to recycle waste mercury thermostats and prohibited from leaving the waste at the customer's home.

Plumbing, Heating, and Cooling Contractors of America (PHCC): On September 13, 2010, TRC sent a letter to eight California-based chapters of PHCC to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix D]. The letter articulated that all HVAC contractors were required to recycle waste mercury thermostats and prohibited from leaving the waste at the customer's home.

Sheet Metal and Air Conditioning Contractors' National Association (SMACNA): On September 13, 2010, TRC sent a letter to eight California-based chapters of SMACNA to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix E]. The letter articulated that all HVAC contractors were required to recycle waste mercury thermostats and prohibited from leaving the waste at the customer's home.

California Household Hazardous Waste Facilities: On December 1, 2010, TRC sent a letter to 177 Household Hazardous Waste Facilities in California to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix F]. The letter explained TRC's program and that participation is free for local governments.

TRC also received coverage in national trade press on numerous occasions. For instance the program was covered in *Indoor Comfort News* (June 2010, July 2010, and October 2010). The HARDI/TRC media release (December, 2010) was covered in *Waste and Recycling News* and *Air Conditioning Today*. TRC's program also received extensive coverage in the HARDI Convention Daily (distributed to all HARDI annual convention attendees) and *HVACR Distributor* (see appendix G for examples of media coverage).

Paid Advertising

TRC ran rotating banner advertisements (Exhibit 1) on the websites contractingbusiness.com and Hvac-talk.com for the months of April, May and June. The advertisement was animated with scrolling images of thermostats, the final message directed contractors to TRC's website.

Both sites are national and target the HVAC contracting audience. Contractingbusiness.com averages 59,000 page views and 27,000 unique visitors per month. Hvac-talk.com averages 1.5 million page views and 221,000 unique visitors per month.

TRC ran a quarter page advertisements in *Indoor Comfort News* in the April, August, and November editions (see exhibit 2). *Indoor Comfort News* has 25,000 subscribers, primarily in the Western United States. It is sent to all licensed C-20 contractors in California and has a total audience of approximately 250,000.

Exhibit 1: Web Banner Advertisement

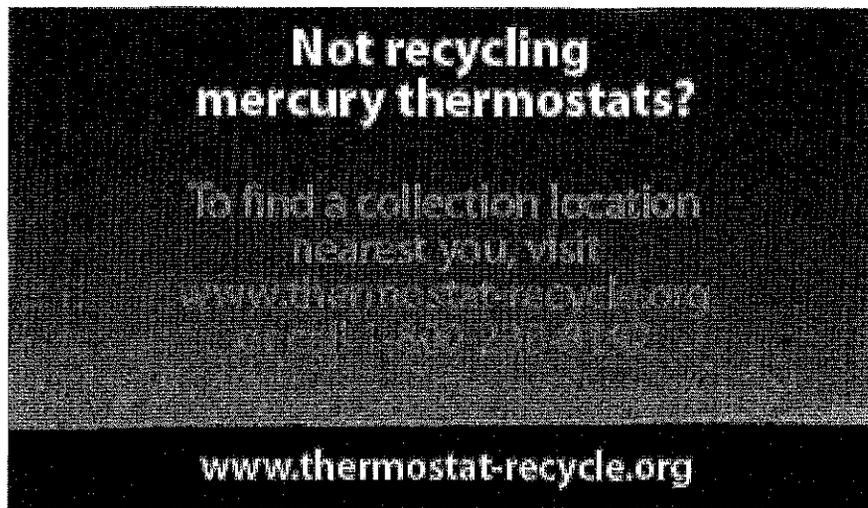

Exhibit 2: Print Advertisement *Indoor Comfort News*

Program Expenses

TRC program expenses for 2010 reflect changes in marketing strategy and certain one-time expenses that occurred in 2009. For instance, in 2009 TRC expended over \$60,000 on the California study (reflected in “administration”) on mercury thermostat disposal and over \$20,000 in printing expense (reflected in “marketing”) for incentive coupons as mandated by Maine and Vermont law.

TRC also shifted from certain paid advertising that was deemed not effective and instead emphasized industry events and trade shows. As such, travel increased significantly in 2010 as TRC staff (including a new full-time outreach staff person hired in November 2009) regularly attended both national and regional industry trade shows.

In 2010 TRC also began the development of new custom database and, while budgeted for 2010, less than 30% of the project expense was booked during the fiscal year and will be carried over to 2011.

Exhibit 3: 2010 Program Expenses

TRC Staff and Administration	\$231,757
Recycling Costs	\$300,096
Insurance	\$17,771
Statutory Incentive Payments	\$40,380
New Collection Containers	\$18,219
Travel	\$28,809
Direct Expenses for Marketing & Outreach	<u>\$76,696</u>
Total	\$713,728

TRC expenses include:

- TRC Staff and Administration: Includes staff and consultants, general office expenses, telecommunications, legal, and other administrative expenses. Includes labor costs to implement California program.
- Insurance: Pollution and liability insurance.
- Travel: All travel in 2010 and includes travel to trade shows to promote program.
- Recycling Costs: All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and data management.
- New Collection Containers: Direct cost for new containers ordered in 2010.
- Marketing/Outreach & Printing: Includes direct costs to develop and print program collateral; direct mail, website development, national and state advertising, sponsorships and other outreach activities. Marketing/Outreach does not include any TRC labor costs.

A copy of TRC’s 2009 IRS Form 990 is attached in appendix H.

Recommendations/Next Steps

TRC was pleased with the program results in 2010. While in absolute numbers TRC still has much to accomplish, the rate in growth in collections is substantial.

In 2010 TRC recovered 13,340 whole thermostats from participating collection locations in California. TRC also recovered 4,207 mercury switches that had been removed from thermostats¹.

Overall, collections of whole thermostats are up 90% since the law's passage in 2008. Only collections in Maryland exceed California's total in 2010.

TRC also continued to add collection locations in 2010. At the end of 2009 there were 321 locations in California that had requested recycling containers. As of March 2010, the number had increased to 428. The majority of which were wholesale distributors.

Despite our success, much work remains to be done. The three most significant challenges to TRC are:

1. Collection point participation: TRC remains concerned with the level of participation among HVAC wholesale distributors. Out of the 500 plus recycling containers TRC had provided to collection points, only 144 were returned in 2010. While the program continues to add locations, it is the *active* collection of thermostats that is essential to the program's long term success. The program must be visible at the location and staff must be informed about the program and encourage participation.

TRC's challenge is that the collection locations are independent businesses that it has no control over. TRC has no enforcement authority and can not compel any collection location to take any action including ordering a container, shipping a container when full, or promoting the program.

2. Marketing to HVAC contractors and other stakeholders: Marketing to HVAC contractors remains challenging. The industry is diverse and is dominated by thousands of small contracting businesses that subsequently employ the technicians that are the primary generators of the waste.

3. Consumer facing promotion: As the Skumatz study indicated, the replacement of a mercury thermostat by a homeowner is likely a one-time event that may occur today or 15 years from now. Moreover, the study indicated that the vast majority of removals were conducted by professionals, not homeowners. Additionally, the disposal of waste thermostats occurs after the removal of the existing thermostat. As such, developing effective marketing strategies remains challenging.

¹ TRC strongly discourages the shipment of mercury switches removed from thermostats, however from time-to-time locations may ship them to TRC despite TRC policies prohibiting their shipment. TRC is unable to estimate the number of whole thermostats this represents as each thermostat may contain between 1 and 6 switches. Each switch contains 2.87 grams of mercury.

Looking towards 2011 and beyond, TRC has refined its marketing strategy and will be focusing on the following:

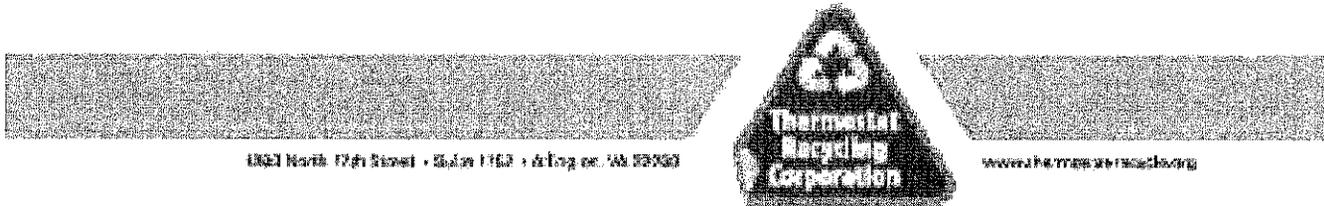

1. Directly engaging wholesale distributors: TRC has seen great success in California and other states where wholesale distributors actively promote the program to their customers. This entails doing more than required by law. TRC's new promotional tool-kit was the first step in this strategy. Our objective is to make it simple (and low-cost) for distributors to promote the program. Several large wholesale distributors see value in the TRC program and have embraced this concept. We see the cooperative partnership with HARDI as essential to this strategy. This relationship provides TRC direct access to key decision-makers at many wholesale distributors in the United States.
2. Leveraging member marketing channels: TRC is working with its member companies in developing strategies to leverage their marketing/sales channels to promote TRC. This may take the form of co-branded collateral promoting the program, award/recognition programs, or other activities that reinforce the importance and value of the program to distributors.
3. Expanding national and regional promotion of the program: In 2010 TRC attended ten national and/or regional industry events. TRC found significant value in attending national and some of the regional shows and will expand this effort in 2011. TRC also (see below for summary of specific activities) expanded the scope of its national/regional advertising in 2011.
4. At the state-level TRC sees opportunities to focus on key sectors in partnership with state regulators. Energy efficiency programs led to significant increases in collections in Maryland, Michigan, Kansas, and Texas in 2010 and we hope to build upon that in other states where opportunities exist. TRC also sees opportunities in encouraging collection point participation in collaboration with state regulators.
5. TRC is also committed to improvement in the program's "infrastructure." TRC will bring a new database into production in 2011 and this will lead to significant improvements in our ability to manage data (including the search tool on TRC's website). TRC is also developing additional collateral in 2011, including point-of-sale information, new advertising creative, and contractor materials.
6. TRC is exploring developing a consumer facing program that serves dual purpose of raising awareness among consumers on the need to recycle mercury thermostats and recognizing HVAC contractors that properly manage waste mercury thermostats. Initial plans are to leverage the channels afforded by new media, including social media in this effort.

In 2011, in support of this marketing strategy, TRC among other things will:

- Attend and exhibit at several national and regional industry trade shows (including the Greater Los Angeles Plumbing Heating Cooling Contractors trade show in March and the IAHCI show in November).

- Expand its advertising buy in www.contractingbusiness.com and www.hvac-talk.com to 4 months (spring and fall). TRC is also developing new creative for this campaign. TRC will repeat the advertising buy in *Indoor Comfort News* but with updated advertising copy
- Place a postcard insert in HVACR Business (April and September issues) that will go to 12,000 subscribers in states, including California, with mercury thermostat disposal bans and/or mandates for recycling.
- Update its website to recognize and promote HVAC distributor participation.
- Directly recruit HVAC distributor participation in the program and encourage distributors to actively promote the program to their customers.
- With HARDI, develop an award program that recognizes the HVAC distributors' contribution to the success of the program.
- Continue efforts to engage with other industry stakeholders and build support for the program.

May 4, 2010

John Lloyd
Vice President
Lloyd's Construction Services, Inc.
7207 West 128th Street
Savage, MN 55378

Dear Mr. Lloyd:

This letter is to serve as a follow-up to our email conversations regarding outreach efforts between the National Demolition Association (NDA) and the Thermostat Recycling Corporation (TRC).

We would like to thank you again for your efforts in presenting information about TRC to the Board of Directors as well as the Environmental Committee at the NDA 2010 Convention. We also appreciate NDA's website including a link and information on TRC's program. Once our website updates are complete, we plan on incorporating a link directing to NDA's website as well.

We look forward to continued collaboration on this issue. We welcome and appreciate the support and assistance.

Please feel free to contact me at email: mtibbets@nema.org or (703) 841-3243 if you need further assistance.

Thank you for your time.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbets".

September 20, 2010

Kevin McCune
President
APWA, Central Coast Chapter
100 Civic Center Plz # 8001
Lompoc, CA 93436

Dear Kevin McCune:

I am writing this letter to bring your attention to recently passed legislation (AB 2347) in California requiring the proper disposal of mercury thermostats. As you may be aware, mercury thermostats contain between 3 and 12 grams of mercury and it is illegal to throw them in the trash in California.

As an industry-supported non-profit, Thermostat Recycling Corporation (TRC) works to facilitate the collection and proper disposal of mercury thermostats. Under California law AB 2347, participation in TRC's waste mercury thermostat collection program is free for local governments. TRC will provide collection containers at no cost to any California local government for use at house hold hazardous waste collection facility or household hazardous waste event. Additionally, TRC assumes all costs to ship and recycle the waste mercury thermostats.

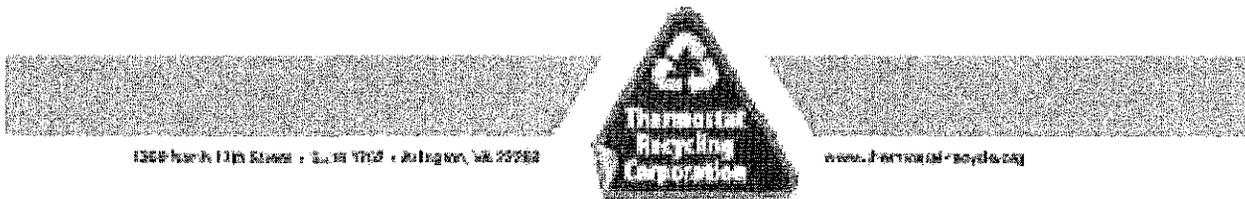

TRC seeks your assistance in getting the word out to your members to raise awareness about the issue and TRC's program. Included with this letter is the sign-up form for California HHW facilities to participate. Additionally, we have attached informational copy to use in a newsletter or online publication.

For more information on the TRC program, or to sign up for the program, please visit TRC's website at www.thermostat-recycle.org/California. TRC can be reached by email at TRC@thermostat-recycle.org or by calling the undersigned at 703-841-3343.

Sincere Regards,

Virginia Borchardt
Communications and Outreach

Appendix C, D, & E: Correspondence with HVAC Stakeholder Organizations

September 9, 2010

Dear :

This letter is to inform you of a law in California that may be of concern to your organization. The Mercury Thermostat Recycling Act of 2008 (A.B. 3347) requires all HVAC contractors that remove a mercury thermostat from service to take the waste thermostat to a collection location. Contractors are specifically prohibited from leaving mercury thermostats at a customer's premises.

As an industry-supported non-profit, Thermostat Recycling Corporation (TRC) works to facilitate the collection and proper disposal of this product at its end of life. The program provides HVAC contractors and homeowners a no-cost means to properly dispose of waste mercury thermostats. TRC accomplishes this through a simple reverse distribution program where HVAC wholesale distributors act as collection points for waste mercury thermostats. TRC is asking for your help in getting the word out to your members in California, with the goal of diverting as many mercury thermostats from the solid waste as possible.

Additionally, some HVAC contracting businesses have the option to directly participate in TRC. HVAC contracting businesses with 7 or more technicians or those that serve rural communities are eligible to sign up and collect mercury thermostats. After an initial fee of \$25.00, TRC assumes all costs to ship and properly dispose of mercury thermostats as many times as collection locations find necessary.

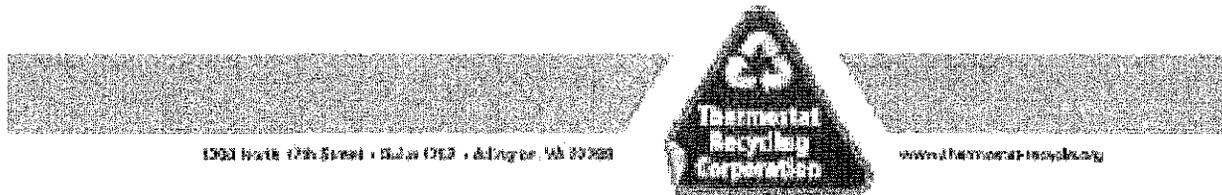

Included with this letter is short newsletter copy that can be used to bring awareness of California law and TRC. Though mercury thermostats aren't a significant source of pollution, they are an easily controlled one. We are asking your help in protecting California's environment by promoting the recycling of mercury thermostats to your members.

For more information on the TRC program, or to sign up for the program, please visit TRC's website at www.thermostat-recycle.org. TRC can be reached by email at TRC@thermostat-recycle.org or by calling the undersigned at 703-841-3143.

Sincere Regards,

Virginia Borchardt

RECYCLING BRIEFS

SCRAP

Schnitzer to expand auto parts biz

A series of transactions will expand Schnitzer Steel Industries' auto parts business, the company said.

The company acquired most of the assets of Waco U-Pull-It Inc. of Waco, Texas; a facility in Stockton, Calif., that will be developed into a specialty self-service facility; and a property adjacent to one of the company's existing facilities in Portland, Ore., that will allow that facility to expand.

"These three transactions continue the expansion of the footprint of our auto parts business and demonstrate the disciplined execution of our stated strategy to develop scale in core supply regions by obtaining scrap at its earliest stage of disposal," said Tamara Lundgren, CEO of Schnitzer Steel Industries.

The Waco acquisition adds to SSI's existing operations in the Dallas/Fort Worth area and in San Antonio. Lundgren called Texas "a high-growth market."

SSI's auto parts business sells used auto parts through 68 self-service facilities located in 14 states and in two Canadian provinces. The company also recycles and exports metals and has a steel manufacturing business.

**Mercury
Thermostat
Collection Act
of 2008**

Sacramento, Calif. The Department of Toxic Substances Control (DTSC) has issued a notice in connection that the Mercury Thermostat Collection Act of 2008 became law on July 1, 2009. It requires that contractors and persons engaged in building demolition properly manage out-of-service mercury-added thermostats.

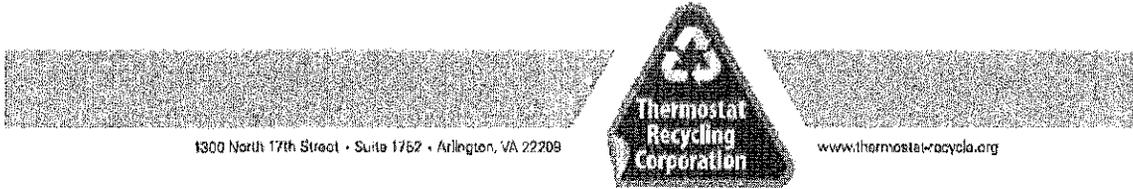

The Mercury Thermostat Collection Act of 2008 imposes requirements on "any contractor who installs heating, ventilation

and air conditioning (HVAC) components and who removes a mercury-added thermostat." Contractors are required by law to handle and transport out-of-service mercury-added thermostats in accordance with the Universal Waste Regulations found in California Code of Regulations, title 22, chapter 23. In addition, contractors must dispose of out-of-service mercury-added thermostats at a collection location that is operated in accordance with Universal Waste Regulations.

For information on the requirements for Universal Waste Regulations, please visit DTSC's universal waste web page at

Appendix H(1): Copy of Letter to HARDI Members

October 7, 2010

Dear Jess Hill:

If you have operations in California, Iowa, Illinois, Maine, Montana, New Hampshire, Pennsylvania, Rhode Island, or Vermont, please plan on visiting with Thermostat Recycling Corporation (TRC) staff at HARDI's Conference Booth Program on Monday, October 25, during HARDI's annual meeting in Houston, Texas. TRC staff will be at booth 429 and attending the full conference.

As you may be aware, these states have passed mercury thermostat legislation. Among other things, the legislation requires all HVAC wholesale distributors with facilities in these jurisdictions to act as a collection point for waste mercury-containing thermostats. While many wholesale distributors have taken advantage of TRC's program and ordered collection containers, many have not begun to actively collect mercury thermostats at all locations in these states.

Failing to act as a collection point could result in penalties that range from sales bans on residential controls to civil penalties up to \$25,000 a day per facility.

TRC staff will be prepared to brief you on your specific legal requirements in each state, which of your facilities are signed up for the program, and the volume of thermostats collected at your locations. TRC staff will also explain how manufacturers, through TRC's take-back program, make compliance easy and nearly cost-free.

If you don't have legal obligations in the states where you have operations, participating in TRC's program is still a great way to promote your business as a "green business" and provide a valuable service to your customers with little direct cost to you. Please visit our booth and we can provide you with all the information you need to participate in and promote the TRC program.

For more information on TRC, please visit our website at www.thermostat-recycle.org. If you would like to speak with TRC staff in advance of HARDI's meeting, please do not hesitate to contact the undersigned at 703-841-3246 or at mark.tibbetts@nema.org.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts".

Form **8868**
(Rev. April 2009)
Department of the Treasury
Internal Revenue Service

Application for Extension of Time To File an Exempt Organization Return

OMB No. 1545-1709

File a separate application for each return.

- If you are filing for an Automatic 3-Month Extension, complete only Part I and check this box **X**
 - If you are filing for an Additional (Not Automatic) 3-Month Extension, complete only Part II (on page 2 of this form).
- Do not complete Part II unless you have already been granted an automatic 3-month extension on a previously filed Form 8868.

Part I Automatic 3-Month Extension of Time. Only submit original (no copies needed).

A corporation required to file Form 990-T and requesting an automatic 6-month extension - check this box and complete Part I only

All other corporations (including 1120-C filers), partnerships, REMICs, and trusts must use Form 7004 to request an extension of time to file income tax returns.

Electronic Filing (e-file). Generally, you can electronically file Form 8868 if you want a 3-month automatic extension of time to file one of the returns noted below (6 months for a corporation required to file Form 990-T). However, you cannot file Form 8868 electronically if (1) you want the additional (not automatic) 3-month extension or (2) you file Forms 990-BL, 6069, or 8870, group returns, or a composite or consolidated Form 990-T. Instead, you must submit the fully completed and signed page 2 (Part II) of Form 8868. For more details on the electronic filing of this form, visit www.irs.gov/efile and click on e-file for Charities & Nonprofits.

Type or print	Name of Exempt Organization	Employer identification number
	THERMOSTAT RECYCLING CORPORATION	54-1830284
File by the due date for filing your return. See instructions.	Number, street, and room or suite no. If a P.O. box, see instructions. 1300 NORTH 17TH STREET, NO. 1752	
	City, town or post office, state, and ZIP code. For a foreign address, see instructions. ARLINGTON, VA 22209

THERMOSTAT RECYCLING CORPORATION

54-1830284 Page 2

Part III Statement of Program Service Accomplishments

1 Briefly describe the organization's mission: TO PROMOTE THE SAFE COLLECTION AND PROPER DISPOSAL OF MERCURY-CONTAINING THERMOSTATS.

2 Did the organization undertake any significant program services during the year which were not listed on the prior Form 990 or 990-EZ? No

3 Did the organization cease conducting, or make significant changes in how it conducts, any program services? No

4 Describe the exempt purpose achievements for each of the organization's three largest program services by expenses. Section 501(c)(3) and 501(c)(4) organizations and section 4947(a)(1) trusts are required to report the amount of grants and allocations to others, the total expenses, and revenue, if any, for each program service reported.

4a (Code:) (Expenses \$ including grants of \$) (Revenue \$) TRC FACILITATES THE PROPER MANAGEMENT OF WASTE MERCURY THERMOSTATS BY PROVIDING RECYCLING CONTAINERS FOR THE COLLECTION AND TRANSPORT OF WASTE MERCURY THERMOSTATS TO ELIGIBLE COLLECTION SITES IN ALL US STATES, EXCEPT ALASKA AND HAWAII. TRC ALSO CONDUCTS AN EDUCATIONAL CAMPAIGN PROMOTING THE PROPER MANAGEMENT OF WASTE MERCURY THERMOSTATS. TRC RECOVERED 155,000 MERCURY THERMOSTATS IN 2009 FROM OVER 1000 COLLECTION SITES. THIS EFFORT DIVERTED ALMOST 1500 POUNDS OF MERCURY FROM SOLID WASTE.

4b (Code:) (Expenses \$ including grants of \$) (Revenue \$)

4c (Code:) (Expenses \$ including grants of \$) (Revenue \$)

4d Other program services. (Describe in Schedule O.) (Expenses \$ including grants of \$) (Revenue \$)

4e Total program service expenses \$

Form 990 (2009)

Part IV Checklist of Required Schedules

		Yes	No
1	Is the organization described in section 501(c)(3) or 4947(a)(1) (other than a private foundation)? <i>If "Yes," complete Schedule A</i>		X
2	Is the organization required to complete Schedule B, Schedule of Contributors?		X
3	Did the organization engage in direct or indirect political campaign activities on behalf of or in opposition to candidates for public office? <i>If "Yes," complete Schedule C, Part I</i>		X
4	Section 501(c)(3) organizations. Did the organization engage in lobbying activities? <i>If "Yes," complete Schedule C, Part II</i> ...		
5	Section 501(c)(4), 501(c)(5), and 501(c)(6) organizations. Is the organization subject to the section 6033(e) notice and reporting requirement and proxy tax? <i>If "Yes," complete Schedule C, Part III</i>		X
6	Did the organization maintain any donor advised funds or any similar funds or accounts where donors have the right to provide advice on the distribution or investment of amounts in such funds or accounts? <i>If "Yes," complete Schedule D, Part I</i>		X
7	Did the organization receive or hold a conservation easement, including easements to preserve open space, the environment, historic land areas, or historic structures? <i>If "Yes," complete Schedule D, Part II</i>		X
8	Did the organization maintain collections of works of art, historical treasures, or other similar assets? <i>If "Yes," complete Schedule D, Part III</i>		X
9	Did the organization report an amount in Part X, line 21; serve as a custodian for amounts not listed in Part X; or provide credit counseling, debt management, credit repair, or debt negotiation services? <i>If "Yes," complete Schedule D, Part IV</i>		X
10	Did the organization, directly or through a related organization, hold assets in term, permanent, or quasi-endowments? <i>If "Yes," complete Schedule D, Part V</i>		X
11	Is the organization's answer to any of the following questions "Yes"? <i>If so, complete Schedule D, Parts VI, VII, VIII, IX, or X as applicable</i>		X
	• Did the organization report an amount for land, buildings, and equipment in Part X, line 10? <i>If "Yes," complete Schedule D, Part VI.</i>		
	• Did the organization report an amount for investments - other securities in Part X, line 12 that is 5% or more of its total assets reported in Part X, line 16? <i>If "Yes," complete Schedule D, Part VII.</i>		
	• Did the organization report an amount for investments - program related in Part X, line 13 that is 5% or more of its total assets reported in Part X, line 16? <i>If "Yes," complete Schedule D, Part VIII.</i>		
	• Did the organization report an amount for other assets in Part X, line 15 that is 5% or more of its total assets reported in Part X, line 16? <i>If "Yes," complete Schedule D, Part IX.</i>		
	• Did the organization report an amount for other liabilities in Part X, line 25? <i>If "Yes," complete Schedule D, Part X.</i>		
	• Did the organization's separate or consolidated financial statements for the tax year include a footnote that addresses the organization's liability for uncertain tax positions under FIN 48? <i>If "Yes," complete Schedule D, Part X.</i>		
12	Did the organization obtain separate, independent audited financial statements for the tax year? <i>If "Yes," complete Schedule D, Parts XI, XII, and XIII.</i>		X
12A	Was the organization included in consolidated, independent audited financial statements for the tax year? <i>If "Yes," completing Schedule D, Parts XI, XII, and XIII is optional</i>	Yes 12A	No X
13	Is the organization a school described in section 170(b)(1)(A)(ii)? <i>If "Yes," complete Schedule E</i>		X
14a	Did the organization maintain an office, employees, or agents outside of the United States?		X
b	Did the organization have aggregate revenues or expenses of more than \$10,000 from grantmaking, fundraising, business, and program service activities outside the United States? <i>If "Yes," complete Schedule F, Part I</i>		X
15	Did the organization report on Part IX, column (A), line 3, more than \$5,000 of grants or assistance to any organization or entity located outside the United States? <i>If "Yes," complete Schedule F, Part II</i>		X
16	Did the organization report on Part IX, column (A), line 3, more than \$5,000 of aggregate grants or assistance to individuals located outside the United States? <i>If "Yes," complete Schedule F, Part III</i>		X
17	Did the organization report a total of more than \$15,000 of expenses for professional fundraising services on Part IX, column (A), lines 6 and 11e? <i>If "Yes," complete Schedule G, Part I</i>		X
18	Did the organization report more than \$15,000 total of fundraising event gross income and contributions on Part VIII, lines 1c and 8a? <i>If "Yes," complete Schedule G, Part II</i>		X
19	Did the organization report more than \$15,000 of gross income from gaming activities on Part VIII, line 9a? <i>If "Yes," complete Schedule G, Part III</i>		X
20	Did the organization operate one or more hospitals? <i>If "Yes," complete Schedule H</i>		X

Part IV Checklist of Required Schedules (continued)

	Yes	No
21 Did the organization report more than \$5,000 of grants and other assistance to governments and organizations in the United States on Part IX, column (A), line 1? If "Yes," complete Schedule I, Parts I and II		X
22 Did the organization report more than \$5,000 of grants and other assistance to individuals in the United States on Part IX, column (A), line 2? If "Yes," complete Schedule I, Parts I and III		X
23 Did the organization answer "Yes" to Part VII, Section A, line 3, 4, or 5 about compensation of the organization's current and former officers, directors, trustees, key employees, and highest compensated employees? If "Yes," complete Schedule J	X	
24a Did the organization have a tax-exempt bond issue with an outstanding principal amount of more than \$100,000 as of the last day of the year, that was issued after December 31, 2002? If "Yes," answer lines 24b through 24d and complete Schedule K. If "No," go to line 25		X
b Did the organization invest any proceeds of tax-exempt bonds beyond a temporary period exception?		
c Did the organization maintain an escrow account other than a refunding escrow at any time during the year to defease any tax-exempt bonds?		
d Did the organization act as an "on behalf of" issuer for bonds outstanding at any time during the year?		
25a Section 501(c)(3) and 501(c)(4) organizations. Did the organization engage in an excess benefit transaction with a disqualified person during the year? If "Yes," complete Schedule L, Part I		
b Is the organization aware that it engaged in an excess benefit transaction with a disqualified person in a prior year, and that the transaction has not been reported on any of the organization's prior Forms 990 or 990-EZ? If "Yes," complete Schedule L, Part I		
26 Was a loan to or by a current or former officer, director, trustee, key employee, highly compensated employee, or disqualified person outstanding as of the end of the organization's tax year? If "Yes," complete Schedule L, Part II		X
27 Did the organization provide a grant or other assistance to an officer, director, trustee, key employee, substantial contributor, or a grant selection committee member, or to a person related to such an individual? If "Yes," complete Schedule L, Part III		X
28 Was the organization a party to a business transaction with one of the following parties, (see Schedule L, Part IV instructions for applicable filing thresholds, conditions, and exceptions):		
a A current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
b A family member of a current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
c An entity of which a current or former officer, director, trustee, or key employee of the organization (or a family member) was an officer, director, trustee, or direct or indirect owner? If "Yes," complete Schedule L, Part IV		X
29 Did the organization receive more than \$25,000 in non-cash contributions? If "Yes," complete Schedule M		X
30 Did the organization receive contributions of art, historical treasures, or other similar assets, or qualified conservation contributions? If "Yes," complete Schedule M		X
31 Did the organization liquidate, terminate, or dissolve and cease operations? If "Yes," complete Schedule N, Part I		X
32 Did the organization sell, exchange, dispose of, or transfer more than 25% of its net assets? If "Yes," complete Schedule N, Part II		X
33 Did the organization own 100% of an entity disregarded as separate from the organization under Regulations sections 301.7701-2 and 301.7701-3? If "Yes," complete Schedule R, Part I		X
34 Was the organization related to any tax-exempt or taxable entity? If "Yes," complete Schedule R, Parts II, III, IV, and V, line 1		X
35 Is any related organization a controlled entity within the meaning of section 512(b)(13)? If "Yes," complete Schedule R, Part V, line 2		X
36 Section 501(c)(3) organizations. Did the organization make any transfers to an exempt non-charitable related organization? If "Yes," complete Schedule R, Part V, line 2		
37 Did the organization conduct more than 5% of its activities through an entity that is not a related organization and that is treated as a partnership for federal income tax purposes? If "Yes," complete Schedule R, Part VI		X
38 Did the organization complete Schedule O and provide explanations in Schedule O for Part VI, lines 11 and 19? Note. All Form 990 filers are required to complete Schedule O.	X	

Part V Statements Regarding Other IRS Filings and Tax Compliance

		Yes	No
1a	Enter the number reported in Box 3 of Form 1096, Annual Summary and Transmittal of U.S. Information Returns. Enter -0- if not applicable		
	1a	3	
b	Enter the number of Forms W-2G included in line 1a. Enter -0- if not applicable		
	1b	0	
c	Did the organization comply with backup withholding rules for reportable payments to vendors and reportable gaming (gambling) winnings to prize winners?	X	
	1c		
2a	Enter the number of employees reported on Form W-3, Transmittal of Wage and Tax Statements, filed for the calendar year ending with or within the year covered by this return		
	2a	0	
b	If at least one is reported on line 2a, did the organization file all required federal employment tax returns? Note. If the sum of lines 1a and 2a is greater than 250, you may be required to e-file this return. (see Instructions)		
	2b		
3a	Did the organization have unrelated business gross income of \$1,000 or more during the year covered by this return?		X
	3a		
b	If "Yes," has it filed a Form 990-T for this year? If "No," provide an explanation in Schedule O		
	3b		
4a	At any time during the calendar year, did the organization have an interest in, or a signature or other authority over, a financial account in a foreign country (such as a bank account, securities account, or other financial account)?		X
	4a		
b	If "Yes," enter the name of the foreign country: See the instructions for exceptions and filing requirements for Form TD F 90-22.1, Report of Foreign Bank and Financial Accounts.		
5a	Was the organization a party to a prohibited tax shelter transaction at any time during the tax year?		X
	5a		
b	Did any taxable party notify the organization that it was or is a party to a prohibited tax shelter transaction?		X
	5b		
c	If "Yes," to line 5a or 5b, did the organization file Form 8886-T, Disclosure by Tax-Exempt Entity Regarding Prohibited Tax Shelter Transaction?		
	5c		
6a	Does the organization have annual gross receipts that are normally greater than \$100,000, and did the organization solicit any contributions that were not tax deductible?		X
	6a		
b	If "Yes," did the organization include with every solicitation an express statement that such contributions or gifts were not tax deductible?		
	6b		
7 Organizations that may receive deductible contributions under section 170(c).			
a	Did the organization receive a payment in excess of \$75 made partly as a contribution and partly for goods and services provided to the payor?		
	7a		
b	If "Yes," did the organization notify the donor of the value of the goods or services provided?		
	7b		
c	Did the organization sell, exchange, or otherwise dispose of tangible personal property for which it was required to file Form 8282?		
	7c		
d	If "Yes," indicate the number of Forms 8282 filed during the year		
	7d		
e	Did the organization, during the year, receive any funds, directly or indirectly, to pay premiums on a personal benefit contract?		
	7e		
f	Did the organization, during the year, pay premiums, directly or indirectly, on a personal benefit contract?		
	7f		
g	For all contributions of qualified intellectual property, did the organization file Form 8899 as required?		
	7g		
h	For contributions of cars, boats, airplanes, and other vehicles, did the organization file a Form 1098-C as required?		
	7h		
8 Sponsoring organizations maintaining donor advised funds and section 509(a)(3) supporting organizations. Did the supporting organization, or a donor advised fund maintained by a sponsoring organization, have excess business holdings at any time during the year?			
	8		
9 Sponsoring organizations maintaining donor advised funds.			
a	Did the organization make any taxable distributions under section 4966?		
	9a		
b	Did the organization make a distribution to a donor, donor advisor, or related person?		
	9b		
10 Section 501(c)(7) organizations. Enter:			
a	Initiation fees and capital contributions included on Part VIII, line 12		
	10a		
b	Gross receipts, included on Form 990, Part VIII, line 12, for public use of club facilities		
	10b		
11 Section 501(c)(12) organizations. Enter:			
a	Gross income from members or shareholders		
	11a		
b	Gross income from other sources (Do not net amounts due or paid to other sources against amounts due or received from them.)		
	11b		
12a Section 4947(a)(1) non-exempt charitable trusts. Is the organization filing Form 990 in lieu of Form 1041?			
	12a		
b	If "Yes," enter the amount of tax-exempt interest received or accrued during the year		
	12b

Part III Questions Regarding Compensation

1a Check the appropriate box(es) if the organization provided any of the following to or for a person listed in Form 990, Part VII, Section A, line 1a. Complete Part III to provide any relevant information regarding these items.

- | | |
|--|--|
| <input type="checkbox"/> First-class or charter travel | <input type="checkbox"/> Housing allowance or residence for personal use |
| <input type="checkbox"/> Travel for companions | <input type="checkbox"/> Payments for business use of personal residence |
| <input type="checkbox"/> Tax indemnification and gross-up payments | <input type="checkbox"/> Health or social club dues or initiation fees |
| <input type="checkbox"/> Discretionary spending account | <input type="checkbox"/> Personal services (e.g., maid, chauffeur, chef) |

b If any of the boxes on line 1a are checked, did the organization follow a written policy regarding payment or reimbursement or provision of all of the expenses described above? If "No," complete Part III to explain

2 Did the organization require substantiation prior to reimbursing or allowing expenses incurred by all officers, directors, trustees, and the CEO/Executive Director, regarding the items checked in line 1a?

3 Indicate which, if any, of the following the organization uses to establish the compensation of the organization's CEO/Executive Director. Check all that apply.

- | | |
|--|--|
| <input type="checkbox"/> Compensation committee | <input type="checkbox"/> Written employment contract |
| <input type="checkbox"/> Independent compensation consultant | <input type="checkbox"/> Compensation survey or study |
| <input type="checkbox"/> Form 990 of other organizations | <input type="checkbox"/> Approval by the board or compensation committee |

4 During the year, did any person listed in Form 990, Part VII, Section A, line 1a, with respect to the filing organization or a related organization:

- | | | | |
|---|----|--|---|
| a Receive a severance payment or change-of-control payment? | 4a | | X |
| b Participate in, or receive payment from, a supplemental nonqualified retirement plan? | 4b | | X |
| c Participate in, or receive payment from, an equity-based compensation arrangement? | 4c | | X |
- If "Yes" to any of lines 4a-c, list the persons and provide the applicable amounts for each item in Part III.

Only section 501(c)(3) and 501(c)(4) organizations must complete lines 5-9.

5 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the revenues of:

- | | | | |
|-----------------------------|----|--|--|
| a The organization? | 5a | | |
| b Any related organization? | 5b | | |
- If "Yes" to line 5a or 5b, describe in Part III.

6 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the net earnings of:

- | | | | |
|-----------------------------|----|--|--|
| a The organization? | 6a | | |
| b Any related organization? | 6b | | |
- If "Yes" to line 6a or 6b, describe in Part III.

7 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization provide any non-fixed payments not described in lines 5 and 6? If "Yes," describe in Part III

8 Were any amounts reported in Form 990, Part VII, paid or accrued pursuant to a contract that was subject to the initial contract exception described in Regs. section 53.4958-4(a)(3)? If "Yes," describe in Part III

9 If "Yes" to line 8, did the organization also follow the rebuttable presumption procedure described in Regulations section 53.4958-6(c)?

Date

Dear _____:

This letter is intended to bring your attention to the issue of the proper disposal of end-of-use mercury-containing thermostats. As you may be aware, many older thermostats contain on average 3 grams of mercury and it is important that at the end-of-use these thermostats are properly disposed of to prevent release of mercury into the environment.

In fact, many states regulate the disposal of mercury-containing products and several go further requiring contractors to assume responsibility for the proper disposal of mercury-containing thermostats.

Fortunately, the proper end-of-life management of mercury thermostats is easy. Voluntarily founded by manufacturers, the Thermostat Recycling Corporation provides an easy and affordable way for contractors to properly dispose of mercury-containing thermostats. TRC has collection locations in 47 states that accept end-of-use thermostats at no charge. TRC absorbs all costs related to shipping, handling, and processing of the waste thermostats. To date, TRC has collected and recycled over 4 tons of mercury and nearly 1 million thermostats.

It is our understanding that many state energy programs are promoting the use of electronic programmable thermostats. We strongly encourage you to incorporate thermostat recycling into your programs. Additionally, adding a link to TRC's website from your own may encourage participation in the program.

To learn more about TRC and how it can support thermostat recycling in your state, please refer to the attached fact sheet that we've included with this letter. Also, you may visit our website at www.thermostat-recycle.org. To contact TRC directly, email Mark.Tibbets@nema.org or call 703-841-3246.

Sincere Regards,

Mark Tibbets
Executive Director
Thermostat Recycling Corporation

Michael R. Peevey, President
California Public Utilities Commission
505 Van Ness Avenue
San Francisco, CA 94102

RE: Introduction to the Thermostat Recycling Corporation

Dear Commissioner Peevey:

The National Electrical Manufacturers Association (NEMA) is the primary trade association representing the interests of the US electrical products industry. Our 430 member companies supply the full spectrum of products used worldwide in the generation, transmission, distribution, control, and end-use of electricity.

In 1998, three NEMA member companies – Honeywell, White-Rodgers, and GE – voluntarily established the Thermostat Recycling Corporation (TRC), a nationwide non-profit designed to facilitate recycling of mercury-added thermostats. The TRC now has 29 corporate members and is the only national program of its kind in the US (see www.thermostat-recycle.org).

I am writing to introduce you to the TRC and its vital role in ensuring that heating, ventilation & air conditioning (HVAC) contractors and demolition workers who remove out-of-service mercury thermostats dispose of them in accordance with California law. The Mercury Thermostat Collection Act of 2008,¹ enacted with the support of Honeywell, the largest corporate member of the TRC, established a regulatory framework for the program aimed at increasing its effectiveness in the state. A key provision of this law is a *legal obligation* on HVAC contractors, the parties who handle end-of-life thermostats most frequently, to ensure they do not enter the solid waste stream (see Sec. 25214.8.15).

This requirement is particularly important for contractors implementing utility energy efficiency programs that involve the replacement of old thermostats with new demand response or smart grid enabled devices. Once a mercury thermostat is removed from service, under California law that thermostat can never be re-installed and must be taken by the contractor to a recycling location. Fortunately, the TRC program provides the means for contractors to meet this requirement.

I encourage you to familiarize yourself with this industry-funded and operated program, and to share this information with relevant CPUC offices and staff. The program is convenient, accessible, and virtually cost-free to participants and we are committed to working with state officials to ensure its continued success in California. If you have questions or would like additional information, please do not hesitate to contact me at 703-841-3249 or mar_kohorst@nema.org.

Very truly yours,

A handwritten signature in black ink, appearing to read "Mark A. Kohorst".

Mark A. Kohorst
Senior Manager, Environment Health & Safety

Subject: Information on CA mercury thermostat Act
Attachments: CA CSLB Blurp.doc

Venus,

You may recall we spoke about a week ago regarding the CA Mercury Thermostat Act. As promised attached is a short article for CSLB's newsletter. The article summarizes CA contractors' legal obligations under the Act and how simple it is to comply with the law by taking advantage of the manufacturers' take-back program.

If you have any questions, or need additional information please do not hesitate to contact me.

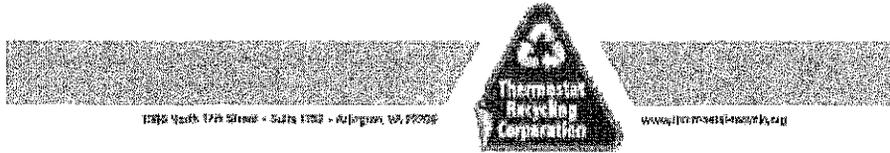

We deeply appreciate your assistance in getting the word out to CA contractors.

Regards,

Mark Tibbetts
Executive Director
Thermostat Recycling Corporation

Appendix N: Correspondence to American Supply Association

September 13, 2010

Mr. Michael Adelizzi
Executive Vice President
American Supply Association
222 Merchandise Mart, Suite 1400
Chicago, IL 60654

Subject: Legal Mandate in Nine States for HVAC Wholesale Distributors to Collect Waste Mercury Thermostats

Dear Mr. Adelizzi:

Thermostat Recycling Corporation (TRC) requests your assistance in informing your members about their legal obligations in several states to collect waste mercury thermostats.

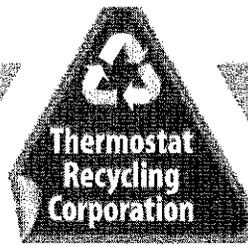

As you maybe aware, many older thermostats contain between three and twelve grams of mercury. While safe when in use, these thermostats may pose a risk to human health and the environment when discarded in solid waste.

In an attempt to increase the number of thermostats diverted from solid waste, several states have passed laws relating to the collection and disposal of waste mercury thermostats. Currently seven states (California, Iowa, Maine, Missouri, New Hampshire, Pennsylvania, and Vermont) require wholesale distributors of HVAC equipment to act as a collection point for waste mercury-containing thermostats. Two additional states (Illinois and Rhode Island) begin mandating collections in 2011.

Fortunately, for wholesale distributors who currently are not collecting mercury thermostats, a simple and low-cost collection/recycling program that satisfies most state legal obligations exists. Manufacturers of mercury-containing thermostats started the non-profit Thermostat Recycling Corporation in 1997 to facilitate the collection of all brands of mercury-containing thermostats.

For a modest one-time fee (currently \$25 per collection container), TRC provides a sturdy plastic collection container, pre-paid shipping label, and educational materials to collection points. TRC assumes all on-going costs for shipping and processing of the thermostats. All that TRC requires is that collection locations only ship whole mercury-containing thermostats (no other mercury-containing products) with their covers, return the container at least once a year, and assistance in promoting the program.

April 1, 2012

VIA EMAIL

Ms. Debbie Raphael, Director
Department of Toxic Substances Control
10001 I Street
Sacramento, CA 95814

Subject: Thermostat Recycling Corporation's 2011 Annual Report for California

Dear Ms. Raphael:

Attached is TRC's annual collection report for calendar year 2011. TRC has made its best effort to provide a comprehensive report on its efforts to promote the collection program in California and improve the program's environmental outcomes. A copy of this report may be found on TRC's website at: <http://www.thermostat-recycle.org/media/index>.

While results are encouraging, much work remains. The program built upon 2010's growth and increased the number of thermostats recovered from California collection locations by nearly 50%.

TRC continues to aggressively market its program in California and the attached report describes a number of modifications to the program in an effort to increase the number of mercury switch thermostats recovered from California in 2012.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", with a long horizontal flourish extending to the right.

Mark Tibbetts
Executive Director

Total	18,697	38,569	239
Switches (removed)		2,534	15.71
Switches		41,103	254.84
Total Thermostats			19,927

From California collection locations TRC recovered 255.84 pounds of mercury from 18,697 intact mercury thermostats and 2,534 mercury switches removed from thermostats.

Based upon 2011 returns, TRC estimates there are 2.05 switches per thermostat recovered from California. The 2,534 switches likely represent an additional 1,230 thermostats.

TRC recovered 16,529 thermostats from HVAC wholesale distributor collection locations, 1,403 from HVAC contractors and 765 from HHW locations in California. TRC received no thermostats from California retail locations in 2011.

Waste Mercury-Added Thermostat Management

Bins with waste mercury-switch thermostats are received at the fulfillment/processing center in Golden Valley, Minnesota. The facility is owned and operated by Honeywell International under contract with TRC.

Bins are received at the loading dock and sent to the TRC processing area. The bin and plastic liner are opened and the contents are identified, sorted,

and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and

mercury switches by manufacturer and any non-conforming material. The bin is returned to the location that sent it in with a new pre-paid address label within 72 hours of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The containers are returned from the storage area to the TRC processing area to have the mercury switches removed from the plastic housing. Universal Waste Regulations require the disposal of waste within 12 months of generation. TRC's processor requires that the disposal occur within 6 months of generation and TRC follows the more stringent requirement. Small quantities of thermostats are removed from the container, which is then closed again, and placed at the switch removal workstation on a tray that contains any potential mercury spillage. The switches are removed from the thermostats and placed into a 2 quart container at the work station. In the event that a switch breaks and mercury spills the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. TRC processing area is equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

The 2 quart container is emptied into a special 55 gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are drawn away and vented when the drum is opened.

The 55 gallon drum is then shipped to Bethlehem Apparatus Corporation in Hellertown, Pennsylvania for final processing of the mercury switches. Bethlehem Apparatus meets or exceeds all local, state, federal regulations for the management of the product. Bethlehem's approvals for mercury recovery/recycling include:

- EPA - identification No. PAD002390961 (Bethlehem Apparatus Co., Inc.)
- EPA BDAT Requirement - satisfied by all recovery operations
- CERCLA (Comprehensive Environmental Response Compensation and Liability Act)
- Pennsylvania Department of Environmental Protection

The facilities' processing follows all EPA guidelines and regulations. TRC has a facility license from Hennepin County Minnesota for the operation of the TRC. Honeywell, Inc. has a Hazardous Waste Generator license from Hennepin County. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

Program Education and Outreach

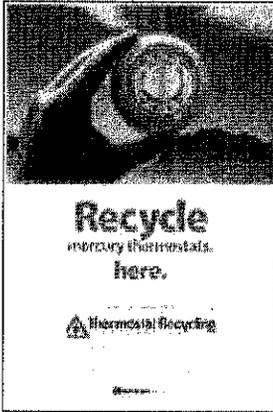

TRC marketing and promotion efforts targeted key audiences in California. TRC's objectives are to raise awareness of California's mercury thermostat law and to encourage the recycling of waste mercury thermostats. Below is a summary of many of the activities and the channels TRC utilized to support of this effort.

Development of Written Materials and Signage for Collection Points and Key stakeholders—TRC maintains on its website (www.thermostat-recycle.org) a Promotional

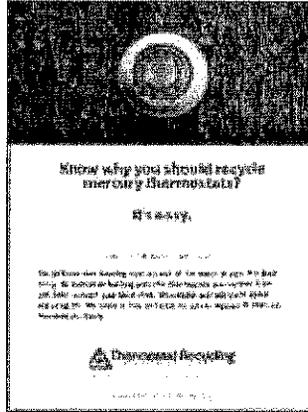

Toolkit which contains templates of a number of items for collection points to download and reproduce. In 2011 TRC added **three new** items to the toolkit. The new items include two posters and two versions of a point-of-sale card.

Exhibit 1: Examples of Toolkit Items

Poster

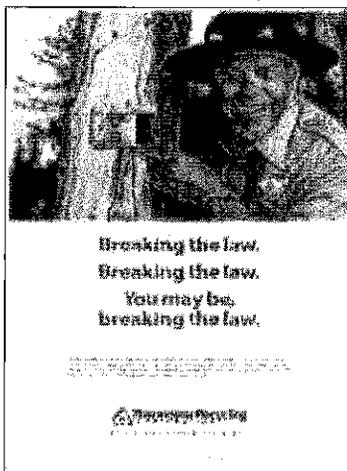

Advertisement

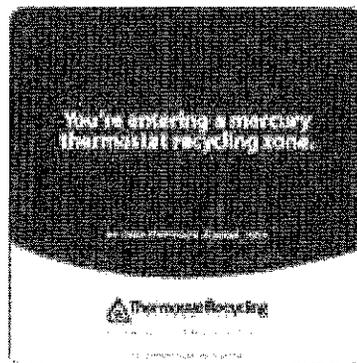

In addition to the templates on TRC's website, TRC placed the new window cling (ideal for the entrances of collection locations) into inventory along with the two new 11 x 17 posters and a postcard. TRC provided the cling and a copy of the "law" poster (or previous versions) to all California locations that ordered a new or additional bin in 2011. TRC actively promotes the availability of these items and will provide these materials to any participating collection location or HVAC contractor. These items are also distributed at trade shows. Finally, TRC provided copies of these materials to DTSC staff in support of the Department's educational efforts.

Exhibit 2: Examples of New Print Collateral

Poster (law version)

Window Cling

Wholesaler Recruitment/Engagement—All HVAC wholesale distributors with physical locations in California are required to act as a collection point for waste mercury thermostats and promote the availability of thermostat recycling at their location(s).

In an effort to increase the level of participation among California distributors TRC employed the following tactics:

- Direct engagement: TRC determined the most efficient and effective means of engaging distributors is not at the branch location level. TRC staff specifically targeted decision makers of distributors with multiple California locations in 2011. The primary message was it is the law and the Department is taking steps to enforce. TRC used industry meetings, member contacts, and other tactics to identify and contact decision makers at distributors.
- Creating competitive pressure: The distribution business is highly competitive and TRC used that to engage competitors. Marketing and media efforts highlighted certain distributors' participation in an effort to engage their competitors. Placing the logos of distributors on TRC's website is one of the best examples of this effort.
- Pushing contractors to collection locations: Paid and earned media emphasized to contractors to ask their distributors to collect; if distributors' customers request the service it is more likely they will offer it.

The following summarizes a few key projects conducted in 2011 targeting distributors.

- In partnership with Heating Airconditioning Refrigeration Distributors International (HARDI), TRC launched the inaugural *Mercury Thermostat Recycling Awards* in **May**. The awards were intended to incent participation in the program by recognizing the distributor(s) that recovered the most mercury thermostats and/or developed innovative strategies to promote the program at its location(s). The program was widely promoted by HARDI to its members and within the industry trade press. TRC also developed custom promotional materials for HARDI members and templates of those materials are available on TRC's website. The awards were presented at HARDI's annual meeting in **October**. California distributors **USACD** and **Baker Distributing** were among the winners.
- TRC placed a 5x7 full-color insert in *HVACR Business* magazine (for greater detail see the advertising section below). TRC included the logos of several California distributors that have supported the program beyond the minimums in the law. California distributors **USACD**, **Baker Distributing**, **Goodman Distribution**, and **RE Michel** provided art to TRC.
- Following the Department's recommendation that TRC "pull" bins from collection locations, TRC sent correspondence (see Appendix A and B) to all California collection locations in **July** that had 1) never returned the bin or 2) had not returned the bin within the last 12 months.¹ TRC included a copy of its window cling sticker in the mailing to promote the availability of materials to participating collection locations.
- TRC added a scrolling bar with the logo of "collection partners" to its website. Several California distributors agreed to provide art to TRC.

¹ The impact of the mailing was significant as evidenced by the spike in returns in August.

Retailer Engagement— TRC continued to encourage large national retailers to participate in the program. During the implementation of San Louis Obispo County’s retail ordinance, TRC again availed the program to large retailers.

Summary of Additional Education and Outreach by Channel

TRC conducted an array of activities intended to raise awareness of California’s mercury thermostat disposal ban, mandatory HVAC contractor recycling, and the ease of compliance through TRC’s collection program.

Website—TRC’s maintains www.thermostat-recycle.org. The website contains participation forms, the previously mentioned outreach toolkit, safety and shipping information, media releases, and reports. The website includes a location search utility that provides for an easy search by zip-code of locations that have ordered TRC collection containers. TRC also promotes its national collection partners by scrolling their corporate logos on the homepage. In **September** TRC completed a *search engine optimization* (SEO) of its website. The objective of the SEO was to increase website traffic by making TRC easier to find on the internet. For instance if a person searches on the term “mercury thermostat recycling” or “thermostat recycling” the first search result in Google is TRC’s website. The optimization nearly doubled TRC’s monthly website traffic and also markedly shifted the manner in which the site is found, as a higher percentage are now finding TRC through “organic search.”

Earned Media— TRC generated considerable positive media attention in 2011. TRC made a concerted effort in 2011 to generate stories on the program. Most notable was the four-page article in *The Air Conditioning, Heating, and Refrigeration News (The News)* which included a TRC provided table on mercury thermostat laws. *The News* is one of the leading industry publications.

The National Demolition Association (NDA) also ran a multi-page article authored by TRC’s executive director on the proper management of mercury containing products found in residential and commercial structures in the **June/July** issue of *Demolition Magazine*. Select reprints of

these articles may be found on TRC's website at <http://www.thermostat-recycle.org/media/index> and have also been included in the Appendix.

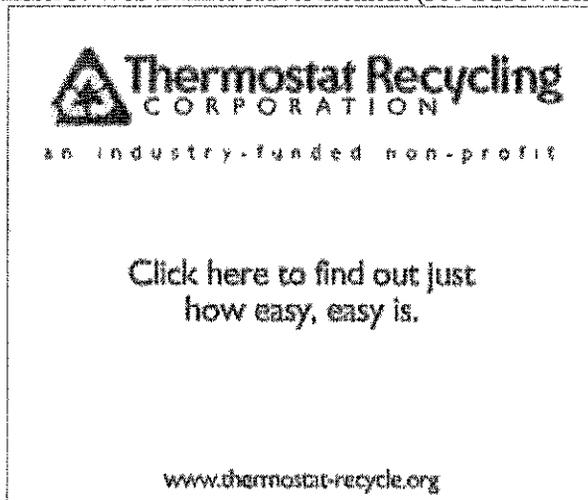

Paid Advertising

ACCA Sponsorship—TRC sponsored the Air Conditioning Contractors of America (ACCA) 2011 Contracting Week in Nashville, Tennessee, **October** 18-21. The sponsorship included TRC's logo on attendee bags, the inclusion of TRC promotional materials in the bag, and TRC's logo on ACCA's website and signage at the event.

Trade channel web-based advertising— TRC developed new rotating banner advertisements and ran them (Exhibit 3) on the websites contractingbusiness.com (160x600 skyscraper) and hvac-talk.com (300x250 medium rectangle) during the months of **April, May, September and October**. Together, the websites average 1.8 million pages views and 280,000 unique visitors per month. HVAC-Talk.com, an online discussion community, boasts 122,000 registered users.

TRC strategically placed ads to coincide with the spring and fall HVAC business cycles. While the ads were featured, 701,528 impressions were delivered and 522 clicks on the advertisements were recorded. In September and October, clicks from HVAC-Talk.com ads accounted for 3% of TRC's website traffic.

Exhibit 3: Web Banner Advertisement (300 x 250 version)

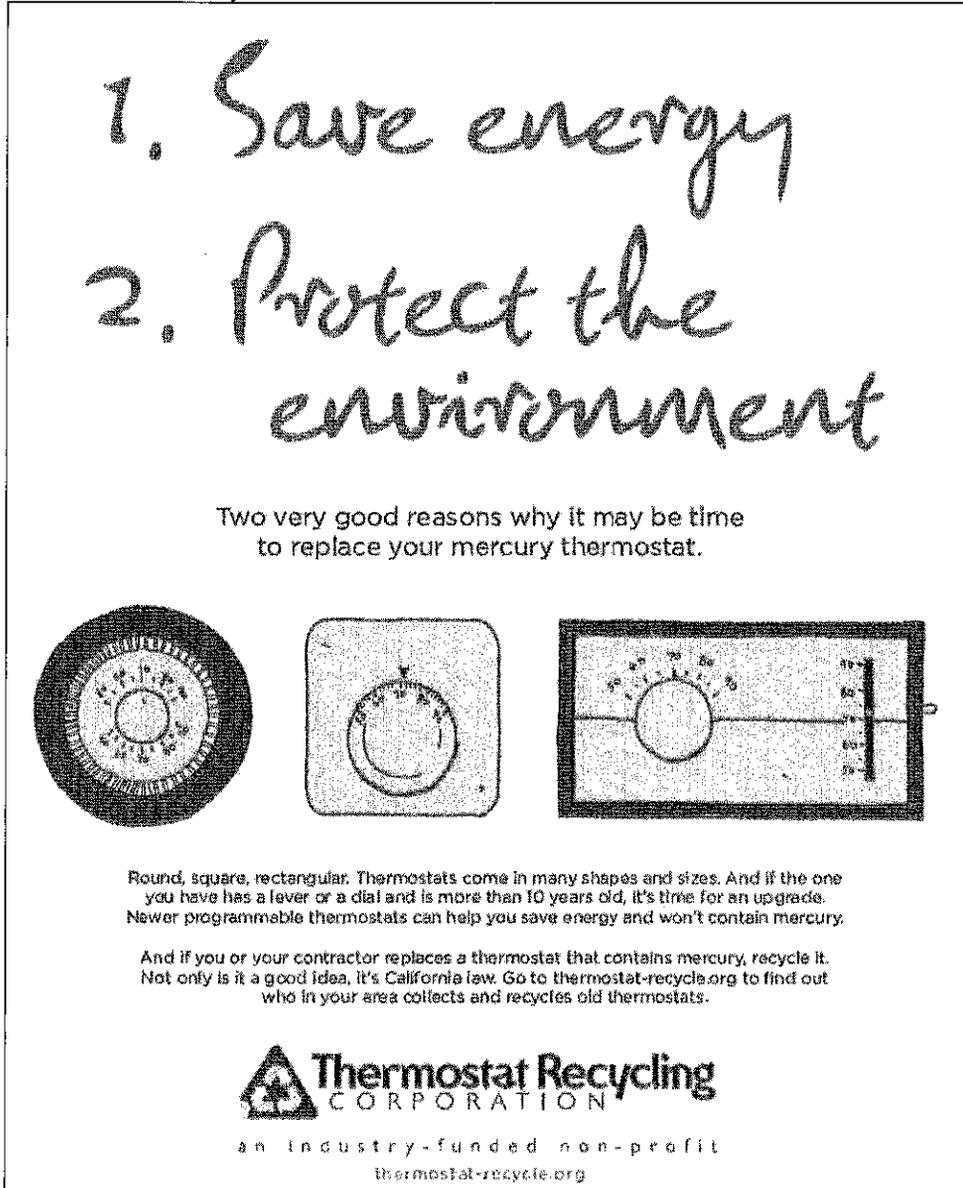

Facebook and Google— TRC developed and deployed a Social Media strategy that leveraged the power of Google and the popularity of Facebook. The campaign, which ran from **September** through **December**, geo-targeted contractors and consumers in California and other states with mercury thermostat disposal bans in an effort to create awareness and increase thermostat collections.

Ads (See Exhibit 4) were developed with variable messages targeting both audiences. Advertisements appeared on Google search results pages after an individual searched terms related to TRC's mission (E.g. thermostat replacement, contracting recycling regulations, mercury thermostat recycling, programmable thermostats, etc.). Similarly, the Facebook

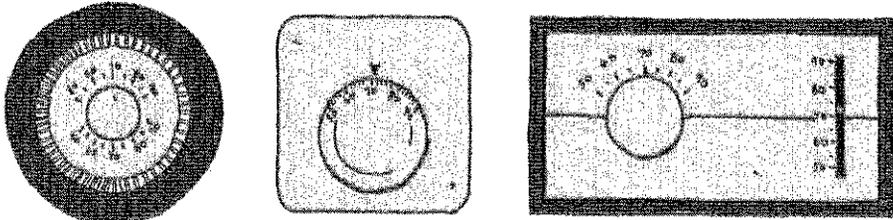

2011 IHACI Summer Energy Savings Guide, *Los Angeles Daily News*—TRC ran a full-page color advertisement in the guide (Exhibit 6). The guide reached over 400,000 readers of the *Daily News* and featured editorial and emphasis on quality installation practices, utility programs, and energy savings.

Exhibit 6: *LA Daily News* Advertisement

1. Save energy
2. Protect the environment

Two very good reasons why it may be time to replace your mercury thermostat.

Round, square, rectangular. Thermostats come in many shapes and sizes. And if the one you have has a lever or a dial and is more than 10 years old, it's time for an upgrade. Newer programmable thermostats can help you save energy and won't contain mercury.

And if you or your contractor replaces a thermostat that contains mercury, recycle it. Not only is it a good idea, it's California law. Go to thermostat-recycle.org to find out who in your area collects and recycles old thermostats.

 **Thermostat Recycling**
CORPORATION

an industry-funded non-profit
thermostat-recycle.org

Indoor Comfort News Advertising—TRC placed a quarter-page advertisement in the April, August, and November issues. *Indoor Comfort News (ICN)* has been published by the Institute of Heating and Air Conditioning Industries, Inc. (IHACI) since 1955 as a tool for attaining the trade association's goal of educating and promoting HVACR industry. *ICN's* audience includes

contractors, distributors, and manufacturers. Total circulation is 25,000 with a readership estimated over 100,000. **California circulation is approximately 17,000.**

Exhibit 7: ICN Advertisement

Fact 1:
Recycling mercury thermostats is easy.

Fact 2:
Recycling is good for business.
(customers like environmentally friendly businesses)

Fact 3:
It's something you gotta do,
because it's the law.

www.thermostat-recycle.org

**The Recycling of Air Conditioning Thermostats is regulated by Title 26 of the California Code of Regulations and is prohibited by California Public Resources Code, Section 45010. July 2008, P. 01, 01007

Tradeshows—TRC attended and exhibited at the following trade shows:

January 31-February 2: AHRExpo. Las Vegas. AHRExpo is the largest national trade show for the HVACR industry. TRC staff exhibited and promoted the program to HVAC contractors, manufacturers and distributors. The show had a total registered attendance of over 53,000.

February 15–17: Air Conditioning Contractors of America Indoor Air Expo, San Antonio, Texas. Representatives from over 200 HVAC contracting businesses attended the show.

March 1: Plumbing, Heating Cooling Contractors of Greater Los Angeles, California. The “Flow Expo” was held at the Long Beach Convention Center and was attended by over 5,000 industry professionals.

May 22-26: Oil and Energy Service Professionals. Hershey, PA. This was OESP’s annual convention and trade show. Nearly 2,700 HVAC professionals attended this show, which targeted service managers for HVAC firms that install and repair oil fired furnaces. TRC sponsored this event and its logo was displayed on event signage and website.

September 27-29: North American Hazardous Materials Management Association (NAHMMA), Portland, Oregon. This was NAHMMA’s annual meeting. TRC exhibited and co-presented with a HARDI representative.

October 23-26: Heating Airconditioning and Refrigeration Distributors International (HARDI). Maui, Hawaii. TRC exhibited and participated in the “Booth Program,” which provides for 1-on-1 sessions with senior executive staff from HARDI member companies. This event targeted representatives of approximately 80% of the wholesale market for HVACR products. TRC also presented the inaugural Thermostat Recycling Award to three HVACR distributors recognizing their support of the program.

November 16: Institute of Heating and Air Conditioning Industries, Inc. (IHACI) **Pasadena, California.** IHACI’s trade show is attended by over 5,000 HVAC professionals; this show is the largest annual California trade show for the industry.

Public Service Announcement— TRC developed a new 30 second public service announcement in 2011 reflecting changes to the Energy Star program.

California

Did you know that by turning down your thermostat by ten to fifteen degrees for eight hours a day you could save ten percent a year on energy bills? That’s according to The US Department of Energy. Installing a programmable thermostat makes this easy.

But remember many older thermostats contain mercury, and if you replace one, you must recycle it--it’s California law. The good news is there are recycling locations all over the state. Go to thermostat dash recycle dot O R G to know more.

In **August** TRC requested (See Appendix D) radio stations serving the California market air the PSA. TRC monitored the airtime of the PSA through **December**. While the monitoring doesn’t cover all stations within California, it does provide data on the frequency and audience for the PSA, particularly in larger markets.

Exhibit 8: PSA Summary:

Market	Stations	Audience Total
Bakersfield	KRAB, KDFO	5,600
Los Angeles	KFRG	9,300
San Fransco	KLIV	74,400
San Deigo	KGB, KHTS, KIOZ, KMYI, KUSS	268,300
Fresno	KJZN	59,500
	Total	417,100

Stakeholder Outreach— TRC sent correspondence followed by a direct appeal via telephone (See Appendix E) to over **40** California trade groups in **August and September**. TRC targeted the California chapters of **Plumbing Heating Cooling Contractors Association** and **Sheet Metal and Air Conditioning Contractors’ National Association**. TRC sent similar correspondence to the **Northern CA Mechanical Contractors Association** and the

Airconditioning, Refrigeration and Mechanical Contractors Association of Southern California. The California chapters of the **National Association of Residential Property Managers, Building Owners and Managers Association,** and **California Apartment Association** also received correspondence. Attached to the correspondence was a simple media release for use in association publications.

Operational Enhancements

TRC made a number of enhancements to its operations in 2011. Some enhancements include:

- To facilitate compliance with the one-year accumulation regulation and speed bin returns, TRC began including an adhesive label to record the accumulation start date in each container. TRC modified the label on the exterior of the bin to include the admonition to return bin within one year of receipt. TRC also updated instructions provided with every new and returned recycling container to explicitly require locations to record the accumulation start date and return the container within one year that date
- To improve customer service TRC began to directly handle customer service calls at program's HQ and included the new toll-free number and email address on instructions provided in each bin. This toll-free number was also provided in all correspondence to California distributors. The new number and email helpline was added to the footer and contact us page on TRC's website. TRC's goal is to return all calls and emails within one business day. TRC is also maintaining a log of all calls to ensure quality of service and that issues are resolved appropriately and in a timely manner.
- TRC updated the participation forms to capture more information from the collection location at the time the bin is ordered. **TRC is also now accepting orders via email and fax,** in an effort to both ease and speed up the order process. TRC also began explicitly offering to invoice bin fees. TRC found this is particularly helpful to larger distributors ordering multiple bins.
- Implemented a new data management system that provides for timely updates to collection location information on the website. TRC also modified the bin order process. **All orders are now initially processed by TRC staff at the corporate office.** This change results in faster processing of orders and fewer errors in processing and data entry.
- Engaged directly with several wholesale distributors with multiple locations in California to **update location information in the program's location database.** Maintaining accurate listings is an on-going and continual process.
- Updated its compliance assistance effort. As collections have increased, the frequency of bins with non-compliant materials has grown. **A new monitoring system was implemented increasing the frequency of contact to collection locations.** This effort has the additional benefit of pushing collateral to locations and updating location information.

Program Expenses

TRC is a national voluntary program that is also operating nine mandatory programs on behalf of its manufacturer members. As most promotional activities are run concurrently in multiple states, tracking and isolating expenses specifically to California is not possible. Below is a summary of TRC's national program expenses for 2011. A copy of TRC's 2010 IRS Form 990 is attached in the Appendix.

Exhibit 8: 2011 Program Administrative Expenses

TRC Staff and Administration	\$ 255,617
Recycling Costs	\$ 299,877
Insurance	\$ 13,945
Statutory Incentive Payments	\$ 37,860
New Collection Containers	\$ 18,859
Travel	\$ 28,108
Legal	\$ 93,272
Direct Expenses for Marketing & Outreach	\$ 123,221
Total	\$ 870,760

TRC expenses include:

- **TRC Staff and Administration:** Includes staff and consultants, general office expenses, telecommunications, and other administrative expenses. Includes staff labor costs to implement California program.
- **Insurance:** Pollution and liability insurance.
- **Travel:** All travel in 2011 includes travel to trade shows to promote program.
- **Recycling Costs:** All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and data management.
- **New Collection Containers:** Direct cost for new containers ordered in 2011.
- **Marketing/Outreach & Printing:** Includes direct costs to develop and print program collateral; direct mail, national and state advertising, sponsorships, marketing consultants, some web and IT consulting, and other outreach activities. Marketing/Outreach does not include any TRC labor costs.

Comments/Recommendations/Modifications

California's mandatory collection program will shortly be entering its third year of operation. Using 2008 as the base year, the cumulative increase in collections is 167%².

² Comparison uses whole thermostats recovered, actual growth higher if the totals include switches removed from thermostats.

While these results are encouraging, TRC recognizes significant work remains. There are also a number of challenges. Some more significant challenges include:

- Wholesale distributor participation remains problematic. As an example, TRC staff visited approximately 20 wholesale distributor collection locations in the Los Angeles area in **November**. Not surprisingly, several were still not collecting (even if TRC had record of a bin order for that location). Surprisingly, many of the locations not collecting had also been visited by DTSC staff, and were still not collecting. TRC speculates that the issue with wholesaler compliance is not awareness of the law's requirements within the channel, but rather it simply may not be considered a priority by some.

However, in the months following, the perceived threat of enforcement has had an impact. The channel is aware that the Department is conducting inspections and risk of substantial fines for non-compliance is now making this program a priority. Both bin orders and requests for materials spiked in the last several months.

- Maintaining accurate information on collection locations. Staff turnover at distributors is high and location information quickly becomes dated. Additionally, locations rarely inform TRC if they move, close, or lose a bin. If anything occurs, locations simply order a new bin. Moreover, typically after the initial bin order the only contact with the collection location is the return of a full bin. The return address information on the pre-printed label from Federal Express is limited and does not allow us to update contact information such as name or phone number³.
- Contractor and/or technician compliance with the disposal ban remain below desired levels. However, we are certain the level of awareness of California law is high within the channel.
- Compliance with TRC storage and shipping policies. TRC's policies are intended to protect the health and safety of program participants in compliance with state and federal regulations. The return of items other than whole mercury thermostats is a continual issue and as collection rates increase, the amount of time and effort now devoted to compliance assistance is significant.

In response, TRC will among other things make the following modifications to its program in 2012:

- Expand and modify aspects of its marketing efforts to the trade channel in California. TRC will **mail over 32,000** postcards to California HVAC contractors in 2012. TRC is also expanding its advertising buy in *Indoor Comfort News* and will run a full-color 5x7 insert in 3 consecutive issues of the magazine. The buy will reach **17,000 California subscribers per issue**.
- **Test a consumer-facing web-based advertising** campaign in California. Noteworthy, the campaign's primary objective will not target consumers' recycling behavior; rather it will attempt to get consumers to affect their HVAC contractors' behavior.

³ Many locations do not even complete the return label. Additionally, locations may provide a main phone number or it may be a direct line to the staff person that ordered the bin(s).

- Develop a postcard reminder encouraging collection locations to ship TRC collection containers within a year of the accumulation date and contact the program with address changes. **TRC's goal is to "touch" collection locations more frequently** and this is one of several tactics that will be employed and/or tested in 2012.
- TRC's new database and changes to its participation forms and bin order processing will assist in the accuracy of collection location information forms moving forward. However, 10 years of legacy data remains a problem. **Cleaning TRC's database** will be one of several projects for the program's summer intern.
- TRC does not see value in conducting site visits to all, or even a substantial minority of locations. Efforts in other states have merely proven what is known; many are not actively collecting. Site visits have not yielded growth in location participation, as staff at the location generally does not have the authority to order bins. Rather, TRC will continue with its strategy of engaging decision makers at the corporate offices of wholesale distributors. Efforts are underway (dependent on the voluntary participation of the distributor) to engage certain distributors with a significant market presence in California on cooperative marketing efforts. Working with HARDI, TRC is also modifying the Thermostat Recycling Awards program to **incent the active promotion of the program** by collection locations.
- Develop additional collateral to **assist HVAC contractors** in promoting their support of the program and incent their participation.
- **Develop two short training videos.** One will be for use by HVAC training instructors to show prior to HVAC training classes. The other will be for wholesale distributors to train staff on the program and TRC's storage and shipping policies (e.g. compliance with universal waste regulations.)

Appendix A: Sample of Correspondence to HVAC Wholesale Distributor locations in California

July 29, 2011

[Redacted]
[Redacted]
[Redacted]
SAN JOSE, CA 95112-0000

Dear [Redacted]

Legislation passed in 2008 requires all HVAC wholesale distributors with facilities in California to act as a collection point for waste mercury-switch thermostats. Thermostat Recycling Corporation thanks you for participating in its program and acting as a collection site for waste mercury thermostats.

According to our records, your location has not returned a bin within the last 12 months. I want to remind you that California universal waste regulations require that wastes such as mercury thermostats be stored for no longer than 12 months from the start date of accumulations. If you have thermostats in the container, please ship it to us promptly. We have included an extra pre-paid shipping label in case you misplaced the one provided with the container. If you have questions about the program, please contact us using the information provided below.

Additionally, TRC recently updated the promotional materials available to collection sites. TRC has both printed cling stickers and posters available at no cost. Templates of materials are available on TRC's website at thermostat-recycle.org. We have included a window cling as an example. Please consider using this collateral as it serves to promote the program while showcasing your business as an environmental steward.

Please feel free to contact me with any questions about the law or TRC's program. Call 888-266-0550 or email us at trc@thermostat-recycle.org

Regards,

Neisha Johnson

Appendix B: Sample of Correspondence to HVAC Wholesale Distributors in California

August 1, 2011

[Redacted address]

SAN DIEGO, CA 92110

COPY

Dear [Redacted name],

Legislation passed in 2008 requires all HVAC wholesale distributors with facilities in California to act as a collection point for waste mercury-switch thermostats. I want to remind you that California universal waste regulations require that wastes such as mercury thermostats be stored for no longer than 12 months from the start date of accumulations.

According to our records, your location received container(s) in order to comply with California law. However, to date, our records indicate we have never received any waste mercury thermostats from this location. It has come to our attention that the California Department of Toxic Substances Control (DTSC) has been conducting inspections of HVAC wholesalers and has begun enforcement of this regulation. If you have thermostats in the container, please ship it to us promptly.

If you no longer have a container or if you need another pre-paid shipping label, please contact Neisha Johnson immediately at 888-266-0550 or by email at trc@thermostat-recycle.org.

Regards,

Mark Tibbetts
Executive Director

ENVIRONMENTAL UPDATE

SAFE HANDLING & DISPOSAL OF MERCURY-CONTAINING THERMOSTATS

Additional Regulations Affect Demolition Industry: Pre-Demolition Removal of Mercury-containing devices from Residential and Commercial Facilities

By **MARK TIBBETTS**
Executive Director
Thermostat Recycling Corporation
Arlington, VA

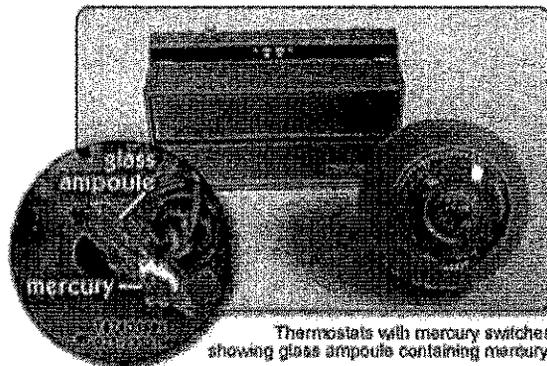

Mercury can be found in various devices in residential and commercial structures. If not managed properly at the end-of-life, these devices can break, releasing mercury into the environment. Prior to demolition, facilities should be inspected and these devices should be removed to ensure proper disposal.

Mercury releases can present a serious environmental and health problem. Inhaling mercury vapors – which are colorless and odorless – can cause irreversible damage to the brain and kidneys. Even very small amounts of mercury (less than a gram) may cause adverse health effects.

The central nervous system, eyes and respiratory system can also be affected by mercury. Developing fetuses and children are the most sensitive to mercury exposure. Inhalation of mercury vapor is the most harmful means of exposure. Mercury can also enter the body through contact with the skin or by swallowing.

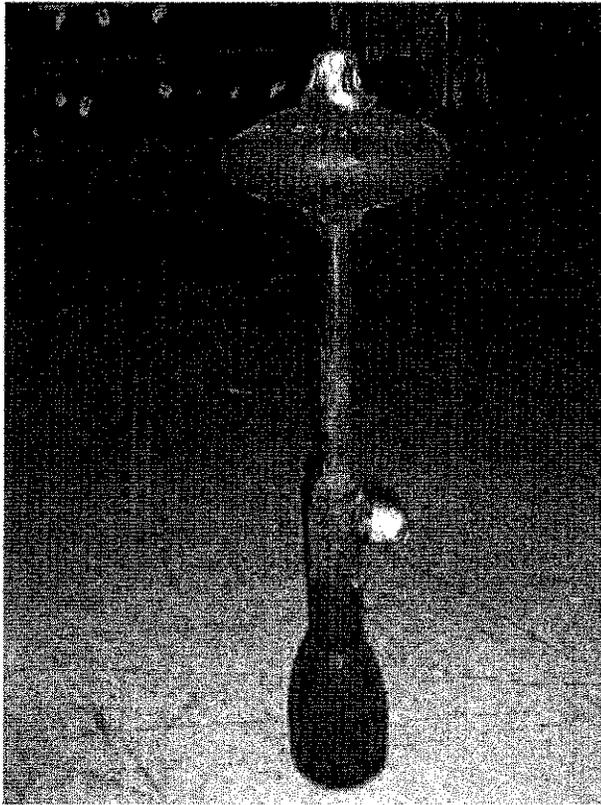

If released, mercury can pose a danger to people if not properly cleaned up and removed. It can easily spread by walking (tracking), sweeping or vacuuming, thereby presenting a potential health threat to others. Tracking throughout a building or into automobiles has spread mercury contamination to many other locations in many instances.

Health impacts will increase over time if the mercury is not properly removed. Mercury vapors are heavier than air and tend to remain near the floor or mercury source, but can get into the ventilation system and be spread throughout a house or business. Indoors, mercury vapors will accumulate in the air. Children five years of age and younger are considered to be particularly sensitive to the effects of mercury on the nervous

Thermostats with mercury switches showing glass ampoules containing mercury.

ENVIRONMENTAL UPDATE

Mercury Seal Generator

system since their central nervous system is still developing. When pregnant women are exposed to mercury, the mercury can pass from the mother's body to the developing fetus; it can also be passed to a nursing infant through breast milk.

CLEANING UP MERCURY SPILLS

If released, clean-up costs are significant. It is not unusual for costs to range from \$5,000 up to \$300,000 for a single incident. Typical response to mercury releases in homes has consisted of relocating the residents and providing temporary housing, gathering visible mercury with a special vacuum, and heating and ventilating the house to drive off the harmful mercury vapors. In some instances, walls, carpeting and floors of houses have had to be removed because they were grossly contaminated. Personal possessions have also been discarded if they became contaminated and the mercury could not be removed. Contaminated materials are likely to be treated as hazardous waste and sent to a special landfill or a mercury retort facility. In a worst case scenario mercury is spread from the original release location into vehicles and other homes via shoes or clothing; spreading contamination and the scope of clean-up.

DEVICES THAT CONTAIN MERCURY

The three most common devices with significant amounts of mercury in them are mercury-switch thermostats, gas pressure regulators, and mercury pressure switches.

Facilities that were built prior to 1968 may have a mercury-containing gas pressure regulator adjacent to the gas meter. Most of these devices were manufactured and installed in the 1940s and 1950s. These devices contain approximately two teaspoons of mercury. Mercury spills have sometimes occurred during improper removal of these devices, causing a potentially significant health risk and resulting in costly cleanups.

Some older boiler heating systems have a mercury seal generator or mercury pressure switch(s). These devices may be found near the boiler or near a radiator on an upper floor. They can contain up to several fluid ounces of mercury. Mercury spills can occur as a result of improper removal of these devices. A spill can require a significant cleanup effort. In April 2011, EPA responded to a mercury spill at a home where an old 1920s boiler had been improperly removed, resulting in a spill of about four fluid ounces of mercury.

The most commonly found mercury-containing devices are mercury-switch thermostats. While it is more likely to find them in residential structures (single and multi-family), mercury-switch thermostats may also be

ENVIRONMENTAL UPDATE

found in commercial and light-industrial facilities. Each thermostat contains up to 12 grams of elemental mercury and is one of the largest remaining reservoirs of mercury in residential buildings today.

LEGAL ISSUES GOVERNING MANAGEMENT

The management of mercury-containing devices is regulated by both state and federal authorities.

The Superfund Law (Section 104 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980 as amended, 42 U.S.C. Sec. 9604) provides the US Environmental Protection Agency (EPA) the legal authority to respond to mercury releases. The Superfund law also gives EPA the authority to identify the party responsible for the release, order those who improperly handle mercury to take appropriate response, and/or compel them to pay for a cleanup.

CERCLA also requires that any release amount above the quantity of one pound – one pound of mercury is approximately two tablespoons – must be reported to the National Response Center.

The Emergency Planning and Community Right-to-Know Act requires that any release of mercury greater than one pound be reported to the local emergency planning committee, state emergency response commission, or local response personnel by the owner/operator.

Disposal of these devices may also be regulated by federal law.

Additionally, many states also regulate the disposal of mercury-containing products. Twelve states specifically ban the disposal of mercury-containing products in solid waste. Additionally, some states, most notably California and Illinois, require demolition contractors to remove and properly manage all mercury-containing thermostats prior to a building's demolition.

PROPER MANAGEMENT

Facilities need to be inspected, and if mercury is present, these devices need to be removed and disposed of properly prior to a building's demolition. In the instance of mercury-containing gas pressure regulators, the removal needs to be coordinated with the gas utility.

In the case of mercury-switch thermostats, they can be managed as a universal waste, reducing costs associated with transport and disposal. In fact, the manufacturers of mercury-switch thermostats established a national program in which assumes all costs associated with the transport and disposal of whole mercury-switch thermostats. For more information on the management of waste mercury thermostats visit www.thermostat-recycle.org.

Appendix D: PSA cover letter

July 29, 2011

10/01/11

Dear Public Service Director,

The Thermostat Recycling Corporation (TRC) is a not-for-profit organization that facilitates the collection and proper disposal of mercury-containing thermostats. Voluntarily founded by thermostat manufacturers, TRC's mission is to promote the safe collection and proper disposal of mercury-containing thermostats.

Mercury is a potent neurotoxin and by properly disposing mercury thermostats by recycling them is the best means of keeping it from the environment. Many people are replacing their old thermostats to save energy and it is important for them to know that many old thermostats contain mercury and should be recycled.

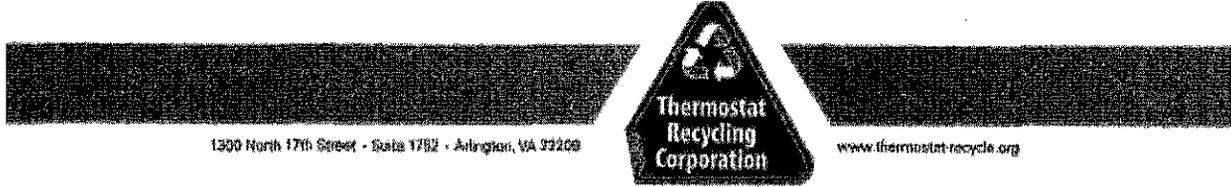

We would appreciate any support you can give us, within your community, by running this Radio PSA, giving your audience a chance to help protect California's environment.

Thank You for your time and consideration,

A handwritten signature in black ink, appearing to read "Mark Tibbetts".

Mark Tibbetts
Executive Director

SUBJECT: IMPORTANT INFORMATION ON CALIFORNIA'S MERCURY THERMOSTAT DISPOSAL ACT

Dear Mr. Schwenk:

This letter is to remind you of a legal obligation in California that affects your members. The Mercury Thermostat Act, which went into effect in 2008, requires HVAC contractors to recycle all mercury-switch thermostats they removed from service. The law prohibits them from leaving them at the customer's premise.

The good news is that this law is very easy to comply with. Manufacturers must provide a no-cost recycling program in the state of California and every HVAC wholesale distributor in California is required to collect waste mercury thermostats. All contractors need to do is have their technicians hang-on to the mercury thermostats they remove from service and make arrangements to drop-off the waste thermostats at any HVAC wholesale distributor free-of-charge.

Thirty manufacturers are supporting the non-profit Thermostat Recycling Corporation (TRC) which is implementing and promoting the collection program in California and other states.

We are interested in working with your organization to increase awareness about the legal obligations of the HVAC industry and TRC's program. Currently less than 50% of all waste mercury thermostats are being recycled in California and it is critical for the HVAC industry to increase the number being recycled. The better this program performs decreases the likelihood of more onerous regulations on the HVAC industry. One has to look no further than the current rule-making by the Department of Toxic Substances Control's (DTSC) to see the risk to the HVAC industry in California.

We attached information on the program and we encourage you to share it with your members. We plan to follow-up with you to discuss ideas on further promoting the program and increasing HVAC contractor's participation in this program.

For more information, please call 703-841-3243 or email Neisha.Johnson@nema.org. Additional information is also available at TRC's website at www.thermostat-recycle.org.

Sincerely,

Mark Tibbetts
Executive Director

Part III Statement of Program Service Accomplishments

Check if Schedule O contains a response to any question in this Part III

1 Briefly describe the organization's mission:
NONE

2 Did the organization undertake any significant program services during the year which were not listed on the prior Form 990 or 990-EZ? Yes No
 If "Yes," describe these new services on Schedule O.

3 Did the organization cease conducting, or make significant changes in how it conducts, any program services? Yes No
 If "Yes," describe these changes on Schedule O.

4 Describe the exempt purpose achievements for each of the organization's three largest program services by expenses. Section 501(c)(3) and 501(c)(4) organizations and section 4947(a)(1) trusts are required to report the amount of grants and allocations to others, the total expenses, and revenue, if any, for each program service reported.

4a (Code: _____) (Expenses \$ **620,299**, including grants of \$ _____) (Revenue \$ _____)
TRC FACILITATES THE PROPER MANAGEMENT OF WASTE MERCURY THERMOSTATS BY PROVIDING RECYCLING CONTAINERS FOR THE COLLECTION AND TRANSPORT OF WASTE MERCURY THERMOSTATS TO ELIGIBLE COLLECTION SITES IN ALL US STATES, EXCEPT ALASKA AND HAWAII. TRC ALSO CONDUCTS AN EDUCATIONAL CAMPAIGN PROMOTING THE PROPER MANAGEMENT OF WASTE MERCURY THERMOSTATS. DURING 2010, TRC HAS COLLECTED OVER 200,000 MERCURY-CONTAINING THERMOSTATS. THIS TRANSLATES TO ALMOST 1,900 POUNDS OF MERCURY REMOVED OUT OF THE WASTE STREAM.

4b (Code: _____) (Expenses \$ _____ including grants of \$ _____) (Revenue \$ _____)

4c (Code: _____) (Expenses \$ _____ including grants of \$ _____) (Revenue \$ _____)

4d Other program services. (Describe in Schedule O.)
 (Expenses \$ _____ including grants of \$ _____) (Revenue \$ _____)

4e Total program service expenses **620,299.**

Part IV Checklist of Required Schedules

	Yes	No
1 Is the organization described in section 501(c)(3) or 4947(a)(1) (other than a private foundation)? If "Yes," complete Schedule A		X
2 Is the organization required to complete Schedule B, Schedule of Contributors?		X
3 Did the organization engage in direct or indirect political campaign activities on behalf of or in opposition to candidates for public office? If "Yes," complete Schedule C, Part I		X
4 Section 501(c)(3) organizations. Did the organization engage in lobbying activities, or have a section 501(h) election in effect during the tax year? If "Yes," complete Schedule C, Part II		
5 Is the organization a section 501(c)(4), 501(c)(5), or 501(c)(6) organization that receives membership dues, assessments, or similar amounts as defined in Revenue Procedure 98-19? If "Yes," complete Schedule C, Part III	X	
6 Did the organization maintain any donor advised funds or any similar funds or accounts where donors have the right to provide advice on the distribution or investment of amounts in such funds or accounts? If "Yes," complete Schedule D, Part I		X
7 Did the organization receive or hold a conservation easement, including easements to preserve open space, the environment, historic land areas, or historic structures? If "Yes," complete Schedule D, Part II		X
8 Did the organization maintain collections of works of art, historical treasures, or other similar assets? If "Yes," complete Schedule D, Part III		X
9 Did the organization report an amount in Part X, line 21; serve as a custodian for amounts not listed in Part X; or provide credit counseling, debt management, credit repair, or debt negotiation services? If "Yes," complete Schedule D, Part IV		X
10 Did the organization, directly or through a related organization, hold assets in trust, permanent, or quasi-endowments? If "Yes," complete Schedule D, Part V		X
11 If the organization's answer to any of the following questions is "Yes," then complete Schedule D, Parts VI, VII, VIII, IX, or X as applicable.		
a Did the organization report an amount for land, buildings, and equipment in Part X, line 10? If "Yes," complete Schedule D, Part VI		X
b Did the organization report an amount for investments - other securities in Part X, line 12 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part VII		X
c Did the organization report an amount for investments - program related in Part X, line 13 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part VIII		X
d Did the organization report an amount for other assets in Part X, line 15 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part IX		X
e Did the organization report an amount for other liabilities in Part X, line 25? If "Yes," complete Schedule D, Part X		X
f Did the organization's separate or consolidated financial statements for the tax year include a footnote that addresses the organization's liability for uncertain tax positions under FIN 48 (ASC 740)? If "Yes," complete Schedule D, Part X		X
12a Did the organization obtain separate, independent audited financial statements for the tax year? If "Yes," complete Schedule D, Parts XI, XII, and XIII		X
b Was the organization included in consolidated, independent audited financial statements for the tax year? If "Yes," and if the organization answered "No" to line 12a, then completing Schedule D, Parts XI, XII, and XIII is optional		X
13 Is the organization a school described in section 170(b)(1)(A)(ii)? If "Yes," complete Schedule E		X
14a Did the organization maintain an office, employees, or agents outside of the United States?		X
b Did the organization have aggregate revenues or expenses of more than \$10,000 from grantmaking, fundraising, business, and program service activities outside the United States? If "Yes," complete Schedule F, Parts I and IV		X
15 Did the organization report on Part IX, column (A), line 3, more than \$5,000 of grants or assistance to any organization or entity located outside the United States? If "Yes," complete Schedule F, Parts II and IV		X
16 Did the organization report on Part IX, column (A), line 3, more than \$5,000 of aggregate grants or assistance to individuals located outside the United States? If "Yes," complete Schedule F, Parts III and IV		X
17 Did the organization report a total of more than \$15,000 of expenses for professional fundraising services on Part IX, column (A), lines 6 and 11a? If "Yes," complete Schedule G, Part I		X
18 Did the organization report more than \$15,000 total of fundraising event gross income and contributions on Part VIII, lines 1c and 9a? If "Yes," complete Schedule G, Part II		X
19 Did the organization report more than \$15,000 of gross income from gaming activities on Part VIII, line 9a? If "Yes," complete Schedule G, Part III		X
20a Did the organization operate one or more hospitals? If "Yes," complete Schedule H		X
b If "Yes" to line 20a, did the organization attach its audited financial statements to this return? Note: Some Form 990 filers that operate one or more hospitals must attach audited financial statements (see instructions)		

Form 990 (2010)

032993 12-21-10

Part IV Checklist of Required Schedules (continued)

	Yes	No
21 Did the organization report more than \$5,000 of grants and other assistance to governments and organizations in the United States on Part IX, column (A), line 1? If "Yes," complete Schedule I, Parts I and II		X
22 Did the organization report more than \$5,000 of grants and other assistance to individuals in the United States on Part IX, column (A), line 2? If "Yes," complete Schedule I, Parts I and III		X
23 Did the organization answer "Yes" to Part VII, Section A, line 3, 4, or 5 about compensation of the organization's current and former officers, directors, trustees, key employees, and highest compensated employees? If "Yes," complete Schedule J		X
24a Did the organization have a tax-exempt bond issue with an outstanding principal amount of more than \$100,000 as of the last day of the year, that was issued after December 31, 2002? If "Yes," answer lines 24b through 24d and complete Schedule K. If "No," go to line 25		X
b Did the organization invest any proceeds of tax-exempt bonds beyond a temporary period exception?		
c Did the organization maintain an escrow account other than a refunding escrow at any time during the year to defease any tax-exempt bonds?		
d Did the organization act as an "on behalf of" issuer for bonds outstanding at any time during the year?		
25a Section 501(c)(3) and 501(c)(4) organizations. Did the organization engage in an excess benefit transaction with a disqualified person during the year? If "Yes," complete Schedule L, Part I		
b Is the organization aware that it engaged in an excess benefit transaction with a disqualified person in a prior year, and that the transaction has not been reported on any of the organization's prior Forms 990 or 990-EZ? If "Yes," complete Schedule L, Part I		
26 Was a loan to or by a current or former officer, director, trustee, key employee, highly compensated employee, or disqualified person outstanding as of the end of the organization's tax year? If "Yes," complete Schedule L, Part II		X
27 Did the organization provide a grant or other assistance to an officer, director, trustee, key employee, substantial contributor, or a grant selection committee member, or to a person related to such an individual? If "Yes," complete Schedule L, Part III		X
28 Was the organization a party to a business transaction with one of the following parties (see Schedule L, Part IV instructions for applicable filing thresholds, conditions, and exceptions):		
a A current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
b A family member of a current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
c An entity of which a current or former officer, director, trustee, or key employee (or a family member thereof) was an officer, director, trustee, or direct or indirect owner? If "Yes," complete Schedule L, Part IV		X
29 Did the organization receive more than \$25,000 in non-cash contributions? If "Yes," complete Schedule M		X
30 Did the organization receive contributions of art, historical treasures, or other similar assets, or qualified conservation contributions? If "Yes," complete Schedule M		X
31 Did the organization liquidate, terminate, or dissolve and cease operations? If "Yes," complete Schedule N, Part I		X
32 Did the organization sell, exchange, dispose of, or transfer more than 25% of its net assets? If "Yes," complete Schedule N, Part II		X
33 Did the organization own 100% of an entity disregarded as separate from the organization under Regulations sections 301.7701-2 and 301.7701-3? If "Yes," complete Schedule R, Part I		X
34 Was the organization related to any tax-exempt or taxable entity? If "Yes," complete Schedule R, Parts II, III, IV, and V, line 1		X
35 Is any related organization a controlled entity within the meaning of section 512(b)(13)?		X
a Did the organization receive any payment from or engage in any transaction with a controlled entity within the meaning of section 512(b)(13)? If "Yes," complete Schedule R, Part V, line 2 <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
36 Section 501(c)(3) organizations. Did the organization make any transfers to an exempt non-charitable related organization? If "Yes," complete Schedule R, Part V, line 2		
37 Did the organization conduct more than 6% of its activities through an entity that is not a related organization and that is treated as a partnership for federal income tax purposes? If "Yes," complete Schedule R, Part VI		X
38 Did the organization complete Schedule O and provide explanations in Schedule O for Part VI, lines 11 and 19? Note. All Form 990 filers are required to complete Schedule O	X

PART V Statements Regarding Other IRS Filings and Tax Compliance

Check if Schedule O contains a response to any question in this Part V

		5	Yes	No
1a	Enter the number reported in Box 3 of Form 1099. Enter -0- if not applicable	1a		
b	Enter the number of Forms W-2G included in line 1a. Enter -0- if not applicable	1b		
c	Did the organization comply with backup withholding rules for reportable payments to vendors and reportable gaming (gambling) winnings to prize winners?	1c	X	
2a	Enter the number of employees reported on Form W-3, Transmittal of Wage and Tax Statements, filed for the calendar year ending with or within the year covered by this return	2a		
b	If at least one is reported on line 2a, did the organization file all required federal employment tax returns? <i>Note. If the sum of lines 1a and 2a is greater than 250, you may be required to e-file. (see instructions)</i>	2b		
3a	Did the organization have unrelated business gross income of \$1,000 or more during the year?	3a		X
b	If "Yes," has it filed a Form 990-T for this year? If "No," provide an explanation in Schedule O	3b		
4a	At any time during the calendar year, did the organization have an interest in, or a signature or other authority over, a financial account in a foreign country (such as a bank account, securities account, or other financial account)?	4a		X
b	If "Yes," enter the name of the foreign country: <i>See instructions for filing requirements for Form TD F 90-22.1, Report of Foreign Bank and Financial Accounts.</i>			
5a	Was the organization a party to a prohibited tax shelter transaction at any time during the tax year?	5a		X
b	Did any taxable party notify the organization that it was or is a party to a prohibited tax shelter transaction?	5b		X
c	If "Yes," to line 5a or 5b, did the organization file Form 8886-T?	5c		
6a	Does the organization have annual gross receipts that are normally greater than \$100,000, and did the organization solicit any contributions that were not tax deductible?	6a		X
b	If "Yes," did the organization include with every solicitation an express statement that such contributions or gifts were not tax deductible?	6b		
7	Organizations that may receive deductible contributions under section 170(e).			
a	Did the organization receive a payment in excess of \$75 made partly as a contribution and partly for goods and services provided to the payor?	7a		
b	If "Yes," did the organization notify the donor of the value of the goods or services provided?	7b		
c	Did the organization sell, exchange, or otherwise dispose of tangible personal property for which it was required to file Form 8282?	7c		
d	If "Yes," indicate the number of Forms 8282 filed during the year	7d		
e	Did the organization receive any funds, directly or indirectly, to pay premiums on a personal benefit contract?	7e		
f	Did the organization, during the year, pay premiums, directly or indirectly, on a personal benefit contract?	7f		
g	If the organization received a contribution of qualified intellectual property, did the organization file Form 8899 as required?	7g		
h	If the organization received a contribution of cars, boats, airplanes, or other vehicles, did the organization file a Form 1098-C?	7h		
8	Sponsoring organizations maintaining donor advised funds and section 509(a)(3) supporting organizations. Did the supporting organization, or a donor advised fund maintained by a sponsoring organization, have excess business holdings at any time during the year?	8		
9	Sponsoring organizations maintaining donor advised funds.			
a	Did the organization make any taxable distributions under section 4966?	9a		
b	Did the organization make a distribution to a donor, donor advisor, or related person?	9b		
10	Section 501(c)(7) organizations. Enter:			
a	Initiation fees and capital contributions included on Part VII, line 12	10a		
b	Gross receipts, included on Form 990, Part VII, line 12, for public use of club facilities	10b		
11	Section 501(c)(12) organizations. Enter:			
a	Gross income from members or shareholders	11a		
b	Gross income from other sources (Do not net amounts due or paid to other sources against amounts due or received from them.)	11b		
12a	Section 4947(a)(1) non-exempt charitable trusts. Is the organization filing Form 990 in lieu of Form 1041?	12a		
b	If "Yes," enter the amount of tax-exempt interest received or accrued during the year	12b		
13	Section 501(c)(29) qualified nonprofit health insurance issuers.			
a	Is the organization licensed to issue qualified health plans in more than one state? <i>Note. See the instructions for additional information the organization must report on Schedule O.</i>	13a		
b	Enter the amount of reserves the organization is required to maintain by the states in which the organization is licensed to issue qualified health plans	13b		
c	Enter the amount of reserves on hand	13c		
14a	Did the organization receive any payments for indoor tanning services during the tax year?	14a		X
b	If "Yes," has it filed a Form 720 to report these payments? If "No," provide an explanation in Schedule O	14b		

Form 990 (2010)

Part VI Governance, Management, and Disclosure For each "Yes" response to lines 2 through 7b below, and for a "No" response to line 8a, 8b, or 10b below, describe the circumstances, processes, or changes in Schedule O. See instructions.

Check if Schedule O contains a response to any question in this Part VI **X**

Section A. Governing Body and Management

	1a	1b	2	3	4	5	6	7a	7b	8a	8b	9	Yes	No
1a Enter the number of voting members of the governing body at the end of the tax year	4													
1b Enter the number of voting members included in line 1a, above, who are independent		4												
2 Did any officer, director, trustee, or key employee have a family relationship or a business relationship with any other officer, director, trustee, or key employee?														X
3 Did the organization delegate control over management duties customarily performed by or under the direct supervision of officers, directors or trustees, or key employees to a management company or other person?														X
4 Did the organization make any significant changes to its governing documents since the prior Form 990 was filed?														X
5 Did the organization become aware during the year of a significant diversion of the organization's assets?														X
6 Does the organization have members or stockholders?										X				
7a Does the organization have members, stockholders, or other persons who may select one or more members of the governing body?										X				
7b Are any decisions of the governing body subject to approval by members, stockholders, or other persons?														X
8 Did the organization contemporaneously document the meetings held or written actions undertaken during the year by the following:														
a The governing body?										X				
b Each committee with authority to act on behalf of the governing body?										X				
9 Is there any officer, director, trustee, or key employee listed in Part VII, Section A, who cannot be reached at the organization's mailing address? If "Yes," provide the names and addresses in Schedule O														X

Section B. Policies (This Section B requests information about policies not required by the Internal Revenue Code.)

	10a	10b	11a	11b	12a	12b	12c	13	14	15a	15b	16a	16b	Yes	No
10a Does the organization have local chapters, branches, or affiliates?															X
10b If "Yes," does the organization have written policies and procedures governing the activities of such chapters, affiliates, and branches to ensure their operations are consistent with those of the organization?															
11a Has the organization provided a copy of this Form 990 to all members of its governing body before filing the form?			X												
11b Describe in Schedule O the process, if any, used by the organization to review this Form 990.															
12a Does the organization have a written conflict of interest policy? If "No," go to line 13					X										
12b Are officers, directors or trustees, and key employees required to disclose annually interests that could give rise to conflicts?															X
12c Does the organization regularly and consistently monitor and enforce compliance with the policy? If "Yes," describe in Schedule O how this is done															X
13 Does the organization have a written whistleblower policy?								X							
14 Does the organization have a written document retention and destruction policy?								X							
15 Did the process for determining compensation of the following persons include a review and approval by independent persons, comparability data, and contemporaneous substantiation of the deliberation and decision?															
a The organization's CEO, Executive Director, or top management official										X					
b Other officers or key employees of the organization										X					
If "Yes" to line 15a or 15b, describe the process in Schedule O. (See instructions.)															
16a Did the organization invest in, contribute assets to, or participate in a joint venture or similar arrangement with a taxable entity during the year?															X
16b If "Yes," has the organization adopted a written policy or procedure requiring the organization to evaluate its participation in joint venture arrangements under applicable federal tax law, and taken steps to safeguard the organization's exempt status with respect to such arrangements?															

Section C. Disclosure

- 17 List the states with which a copy of this Form 990 is required to be filed **CA, MT**
- 18 Section 6104 requires an organization to make its Forms 1023 (or 1024 if applicable), 990, and 990-T (501(c)(3)s only) available for public inspection. Indicate how you make these available. Check all that apply.
 Own website Another's website Upon request
- 19 Describe in Schedule O whether (and if so, how), the organization makes its governing documents, conflict of interest policy, and financial statements available to the public.
- 20 State the name, physical address, and telephone number of the person who possesses the books and records of the organization: **MARK TIBBETTS - 703-841-3200**
1300 NORTH 17TH STREET, NO. 1752, ARLINGTON, VA 22209

33 Total net assets or fund balances		-93,241.	33	-134,831.
34 Total liabilities and net assets/fund balances		189,345.	34	189,998.

Form 990 (2010)

Part XI Reconciliation of Net Assets

Check if Schedule O contains a response to any question in this Part XI

1	Total revenue (must equal Part VIII, column (A), line 12)	1	672,104.
2	Total expenses (must equal Part IX, column (A), line 25)	2	713,694.
3	Revenue less expenses. Subtract line 2 from line 1	3	-41,590.
4	Net assets or fund balances at beginning of year (must equal Part X, line 33, column (A))	4	-93,241.
5	Other changes in net assets or fund balances (explain in Schedule O)	5	
6	Net assets or fund balances at end of year. Combine lines 3, 4, and 5 (must equal Part X, line 33, column (B))	6	-134,831.

Part XII Financial Statements and Reporting

Check if Schedule O contains a response to any question in this Part XII

		Yes	No
1	Accounting method used to prepare the Form 990: <input type="checkbox"/> Cash <input checked="" type="checkbox"/> Accrual <input type="checkbox"/> Other _____ If the organization changed its method of accounting from a prior year or checked "Other," explain in Schedule O.		
2a	Were the organization's financial statements compiled or reviewed by an independent accountant?	X	
b	Were the organization's financial statements audited by an independent accountant?		X
c	If "Yes" to line 2a or 2b, does the organization have a committee that assumes responsibility for oversight of the audit, review, or completion of its financial statements and selection of an independent accountant? If the organization changed either its oversight process or selection process during the tax year, explain in Schedule O.	X	
d	If "Yes" to line 2a or 2b, check a box below to indicate whether the financial statements for the year were issued on a separate basis, consolidated basis, or both: <input checked="" type="checkbox"/> Separate basis <input type="checkbox"/> Consolidated basis <input type="checkbox"/> Both consolidated and separate basis		
3a	As a result of a federal award, was the organization required to undergo an audit or audits as set forth in the Single Audit Act and OMB Circular A-133?		X
b	If "Yes," did the organization undergo the required audit or audits? If the organization did not undergo the required audit or audits, explain why in Schedule O and describe any steps taken to undergo such audits.		

Form 990 (2010)

SCHEDULE C
(Form 990 or 990-EZ)

Political Campaign and Lobbying Activities

OMB No. 1545-0047

2010

Department of the Treasury
Internal Revenue Service

For Organizations Exempt From Income Tax Under section 501(c) and section 527

▶ **Complete if the organization is described below.** ▶ **Attach to Form 990 or Form 990-EZ.**
▶ **See separate instructions.**

Open to Public Inspection

If the organization answered "Yes," to Form 990, Part IV, line 3, or Form 990-EZ, Part V, line 46 (Political Campaign Activities), then

- Section 501(c)(3) organizations: Complete Parts I-A and B. Do not complete Part I-C.
- Section 501(c) (other than section 501(c)(3)) organizations: Complete Parts I-A and C below. Do not complete Part I-B.
- Section 527 organizations: Complete Part I-A only.

If the organization answered "Yes," to Form 990, Part IV, line 4, or Form 990-EZ, Part VI, line 47 (Lobbying Activities), then

- Section 501(c)(3) organizations that have filed Form 5708 (election under section 501(h)): Complete Part II-A. Do not complete Part II-B.
- Section 501(c)(3) organizations that have NOT filed Form 5708 (election under section 501(h)): Complete Part II-B. Do not complete Part II-A.

If the organization answered "Yes," to Form 990, Part IV, line 5 (Proxy Tax), or Form 990-EZ, Part V, line 35a (Proxy Tax), then

- Section 501(c)(4), (5), or (6) organizations: Complete Part III.

Name of organization: **THERMOSTAT RECYCLING CORPORATION** Employer identification number: **54-1830284**

Part I-A Complete if the organization is exempt under section 501(c) or is a section 527 organization.

- 1 Provide a description of the organization's direct and indirect political campaign activities in Part IV.
- 2 Political expenditures ▶ \$ _____
- 3 Volunteer hours _____

Part I-B Complete if the organization is exempt under section 501(c)(3).

- 1 Enter the amount of any excise tax incurred by the organization under section 4955 ▶ \$ _____
 - 2 Enter the amount of any excise tax incurred by organization managers under section 4955 ▶ \$ _____
 - 3 If the organization incurred a section 4955 tax, did it file Form 4720 for this year? Yes No
 - 4a Was a correction made? Yes No
- b If "Yes," describe in Part IV.

Part I-C Complete if the organization is exempt under section 501(c), except section 501(c)(3).

- 1 Enter the amount directly expended by the filing organization for section 527 exempt function activities ▶ \$ _____
- 2 Enter the amount of the filing organization's funds contributed to other organizations for section 527 exempt function activities ▶ \$ _____
- 3 Total exempt function expenditures. Add lines 1 and 2. Enter here and on Form 1120-POL, line 17b ▶ \$ _____
- 4 Did the filing organization file Form 1120-POL for this year? Yes No
- 5 Enter the names, addresses and employer identification number (EIN) of all section 527 political organizations to which the filing organization made payments. For each organization listed, enter the amount paid from the filing organization's funds. Also enter the amount of political contributions received that were promptly and directly delivered to a separate political organization, such as a separate segregated fund or a political action committee (PAC). If additional space is needed, provide information in Part IV.

(a) Name	(b) Address	(c) EIN	(d) Amount paid from filing organization's funds. If none, enter -0-	(e) Amount of political contributions received and promptly and directly delivered to a separate political organization. If none, enter -0-

For Paperwork Reduction Act Notice, see the Instructions for Form 990 or 990-EZ. Schedule C (Form 990 or 990-EZ) 2010 LHA

Part II-A Complete if the organization is exempt under section 501(c)(3) and filed Form 5768 (election under section 501(h)).

- A Check if the filing organization belongs to an affiliated group.
 B Check if the filing organization checked box A and "limited control" provisions apply.

Limits on Lobbying Expenditures (The term "expenditures" means amounts paid or incurred.)		(a) Filing organization's totals	(b) Affiliated group totals												
1a Total lobbying expenditures to influence public opinion (grass roots lobbying)															
b Total lobbying expenditures to influence a legislative body (direct lobbying)															
c Total lobbying expenditures (add lines 1a and 1b)															
d Other exempt purpose expenditures															
e Total exempt purpose expenditures (add lines 1c and 1d)															
f Lobbying nontaxable amount. Enter the amount from the following table in both columns. If the amount on line 1e, column (a) or (b) is:															
<table border="1"> <thead> <tr> <th>If the amount on line 1e, column (a) or (b) is:</th> <th>The lobbying nontaxable amount is:</th> </tr> </thead> <tbody> <tr> <td>Not over \$500,000</td> <td>20% of the amount on line 1e.</td> </tr> <tr> <td>Over \$500,000 but not over \$1,000,000</td> <td>\$100,000 plus 15% of the excess over \$500,000.</td> </tr> <tr> <td>Over \$1,000,000 but not over \$1,500,000</td> <td>\$175,000 plus 10% of the excess over \$1,000,000.</td> </tr> <tr> <td>Over \$1,500,000 but not over \$17,000,000</td> <td>\$225,000 plus 5% of the excess over \$1,500,000.</td> </tr> <tr> <td>Over \$17,000,000</td> <td>\$1,000,000.</td> </tr> </tbody> </table>		If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:	Not over \$500,000	20% of the amount on line 1e.	Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.	Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.	Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.	Over \$17,000,000	\$1,000,000.		
If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:														
Not over \$500,000	20% of the amount on line 1e.														
Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.														
Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.														
Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.														
Over \$17,000,000	\$1,000,000.														
g Grassroots nontaxable amount (enter 25% of line 1f)															
h Subtract line 1g from line 1e. If zero or less, enter -0-															
i Subtract line 1f from line 1c. If zero or less, enter -0-															
j If there is an amount other than zero on either line 1h or line 1i, did the organization file Form 4720 reporting section 4911 tax for this year?		<input type="checkbox"/> Yes	<input type="checkbox"/> No												

4-Year Averaging Period Under Section 501(h)
 (Some organizations that made a section 501(h) election do not have to complete all of the five columns below. See the instructions for lines 2a through 2f on page 4.)

Lobbying Expenditures During 4-Year Averaging Period					
Calendar year (or fiscal year beginning in)	(a) 2007	(b) 2008	(c) 2009	(d) 2010	(e) Total
2a Lobbying nontaxable amount					
b Lobbying ceiling amount (150% of line 2a, column (a))					
c Total lobbying expenditures					
d Grassroots nontaxable amount					
e Grassroots ceiling amount (150% of line 2d, column (a))					
f Grassroots lobbying expenditures					

Schedule C (Form 990 or 990-EZ) 2010

Part II-B Complete if the organization is exempt under section 501(c)(3) and has NOT filed Form 5768 (election under section 501(h)).

	(a)		(b)
	Yes	No	Amount
1 During the year, did the filing organization attempt to influence foreign, national, state or local legislation, including any attempt to influence public opinion on a legislative matter or referendum, through the use of:			
a Volunteers?			
b Paid staff or management (include compensation in expenses reported on lines 1c through 1i)?			
c Media advertisements?			
d Mailings to members, legislators, or the public?			
e Publications, or published or broadcast statements?			
f Grants to other organizations for lobbying purposes?			
g Direct contact with legislators, their staffs, government officials, or a legislative body?			
h Rallies, demonstrations, seminars, conventions, speeches, lectures, or any similar means?			
i Other activities? If "Yes," describe in Part IV			
j Total. Add lines 1c through 1i			
2a Did the activities in line 1 cause the organization to be not described in section 501(c)(3)?			
b If "Yes," enter the amount of any tax incurred under section 4912			
c If "Yes," enter the amount of any tax incurred by organization managers under section 4912			
d If the filing organization incurred a section 4912 tax, did it file Form 4720 for this year?			

Part III-A Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6).

	Yes	No
1 Were substantially all (90% or more) dues received nondeductible by members?		X
2 Did the organization make only in-house lobbying expenditures of \$2,000 or less?	X	
3 Did the organization agree to carryover lobbying and political expenditures from the prior year?		X

Part III-B Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6) if BOTH Part III-A, lines 1 and 2 are answered "No" OR if Part III-A, line 3 is answered "Yes."

1 Dues, assessments and similar amounts from members	1	
2 Section 162(e) nondeductible lobbying and political expenditures (do not include amounts of political expenses for which the section 527(f) tax was paid).		
a Current year	2a	
b Carryover from last year	2b	
c Total	2c	
3 Aggregate amount reported in section 8033(e)(1)(A) notices of nondeductible section 162(e) dues	3	
4 If notices were sent and the amount on line 2c exceeds the amount on line 3, what portion of the excess does the organization agree to carryover to the reasonable estimate of nondeductible lobbying and political expenditures next year?	4	
5 Taxable amount of lobbying and political expenditures (see instructions)	5	

Part IV Supplemental information

Complete this part to provide the descriptions required for Part I-A, line 1; Part I-B, line 4; Part I-C, line 5; and Part II-B, line 1i. Also, complete this part for any additional information.

FROM TIME TO TIME, THE BOARD OF DIRECTORS MAY INVITE OTHER THERMOSTAT MANUFACTURERS TO PARTICIPATE AS MEMBERS IN THE CORPORATION. SUCH A CORPORATION SHALL BECOME A MEMBER ONLY UPON PAYMENT OF FEES AS PROVIDED UNDER ARTICLE VII OF THE BY-LAWS.

FORM 990, PART VI, SECTION A, LINE 7A: THERE SHALL BE A NOMINATING COMMITTEE OF THE BOARD OF DIRECTORS, WHICH SHALL CONSIST OF THREE DIRECTORS, ALL OF WHOM ARE EMPLOYED BY ORIGINAL MEMBERS. ONE MONTH PRIOR TO THE ANNUAL MEETING OF THE CORPORATION, THE NOMINATING COMMITTEE SHALL APPROVE A SLATE OF NOMINEES MEETING THE QUALIFICATIONS SET FORTH IN SECTION 2 TO BE SUBMITTED TO THE MEMBERS FOR ELECTION AT THE ANNUAL MEETING.

FORM 990, PART VI, SECTION B, LINE 11: A COPY OF FORM 990 IS PROVIDED TO ALL GOVERNING MEMBERS BEFORE IT IS FILED. A REASONABLE AMOUNT OF TIME IS ALLOWED FOR THE GOVERNING MEMBERS TO REVIEW THE FORM 990 AND PROVIDE COMMENTS.

FORM 990, PART VI, SECTION B, LINE 15: COMPENSATION IS ESTABLISHED BY THE NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION (NEMA). NEMA UTILIZES INDEPENDENT CONSULTANTS AND COMPARABILITY DATA, AMONG OTHER METHODS, TO

LHA For Paperwork Reduction Act Notice, see the Instructions for Form 990 or 990-EZ.
932211
01-24-11

Schedule O (Form 990 or 990-EZ) (2010)

Name of the organization

THERMOSTAT RECYCLING CORPORATION

Employer identification number

54-1830284

DETERMINE THE COMPENSATION OF THE ORGANIZATION'S EXECUTIVE DIRECTOR.

FORM 990, PART VI, SECTION C, LINE 19; TRC MAKES ITS GOVERNING DOCUMENTS,
CONFLICT OF INTEREST POLICY, AND FINANCIAL STATEMENTS AVAILABLE TO THE
PUBLIC UPON REQUEST (VIA E-MAIL OR MAIL).

PART XII, LINE 2C - THIS PROCESS HAS REMAINED UNCHANGED FROM THE PRIOR
YEAR.

Form **8868**
 (Rev. January 2011)
 Department of the Treasury
 Internal Revenue Service

Application for Extension of Time To File an Exempt Organization Return

OMB No. 1545-1709

▶ **File a separate application for each return.**

- If you are filing for an Automatic 3-Month Extension, complete only Part I and check this box **X**
- If you are filing for an Additional (Not Automatic) 3-Month Extension, complete only Part II (on page 2 of this form).

Do not complete Part II unless you have already been granted an automatic 3-month extension on a previously filed Form 8868.

Electronic filing (e-file). You can electronically file Form 8868 if you need a 3-month automatic extension of time to file (6 months for a corporation required to file Form 990-T), or an additional (not automatic) 3-month extension of time. You can electronically file Form 8868 to request an extension of time to file any of the forms listed in Part I or Part II with the exception of Form 8870, Information Return for Transfers Associated With Certain Personal Benefit Contracts, which must be sent to the IRS in paper format (see instructions). For more details on the electronic filing of this form, visit www.irs.gov/efile and click on *e-file for Charities & Nonprofits*.

Part I Automatic 3-Month Extension of Time. Only submit original (no copies needed).

A corporation required to file Form 990-T and requesting an automatic 6-month extension - check this box and complete

Part I only

All other corporations (including 1120-C filers), partnerships, REMICs, and trusts must use Form 7004 to request an extension of time to file income tax returns.

Type or print	Name of exempt organization	Employer identification number
	THERMOSTAT RECYCLING CORPORATION	54-1830284
File by the due date for filing your return. See instructions.	Number, street, and room or suite no. if a P.O. box, see instructions.	
	1300 NORTH 17TH STREET, NO. 1752	
	City, town or post office, state, and ZIP code. For a foreign address, see instructions.	
	ARLINGTON, VA 22209	

Enter the Return code for the return that this application is for (file a separate application for each return) **011**

California's Mercury Thermostat Collection Act: an EPR Approach

André Algazi
Toxics in Products Branch
California Department of Toxic Substances Control

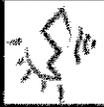

First some background...

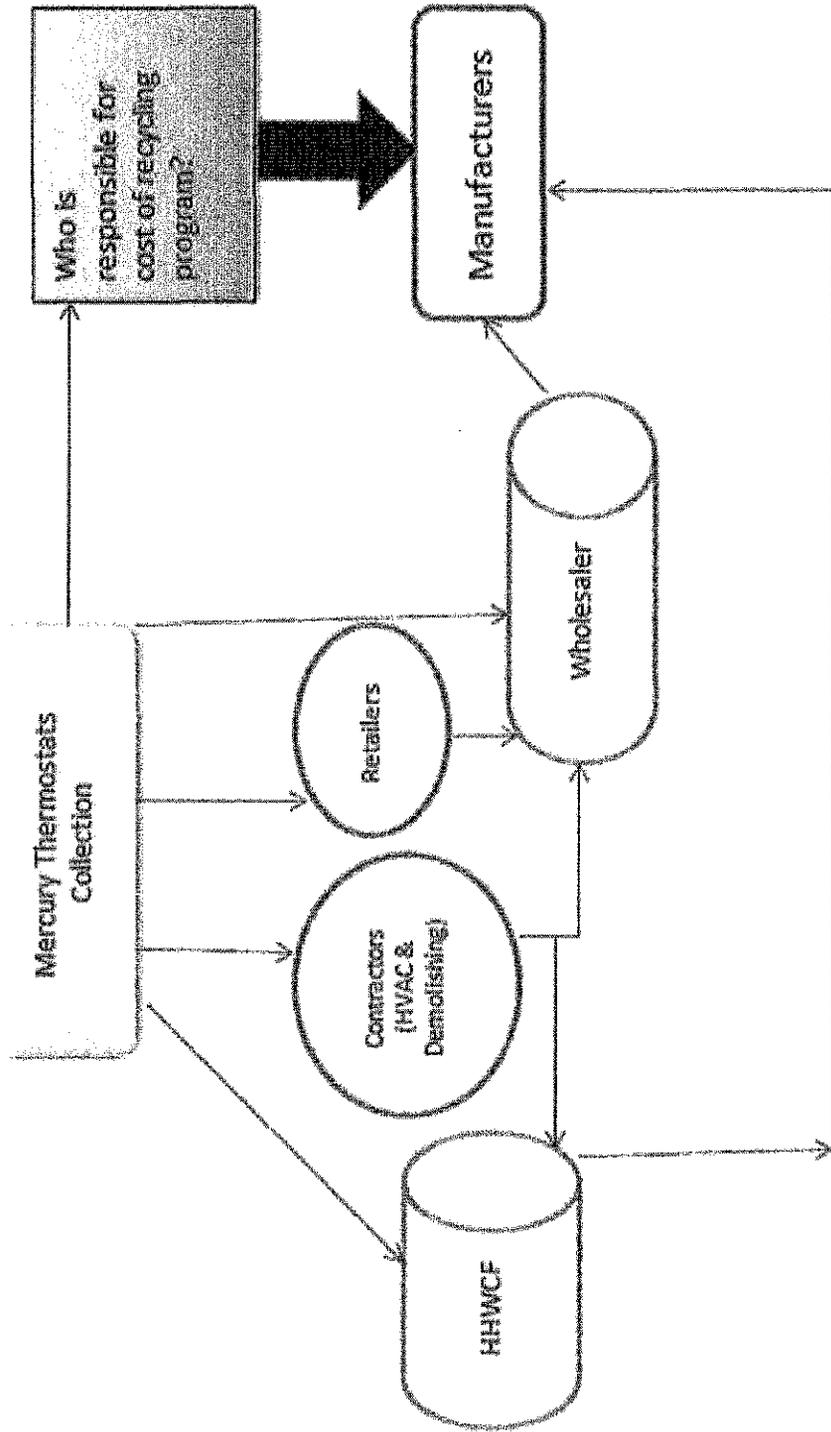

- In California, out-of-service mercury-added thermostats are hazardous waste
 - Regulated as universal waste since 2000
 - Disposal is banned, even for household-generated
- Mercury-added thermostats have been banned from sale since 2006

California's Law is EPR => The Focus is on Manufacturers...

- Individually, or as a group, they must establish and operate a program to collect out-of-service mercury-added thermostats
 - Provide bins to wholesalers of HVAC equipment and to HHW collection programs
 - Cover recycling process including cost
 - Beginning April 1, 2010, submit an annual report to the Department

Acronyms:

HHWCF- HOUSEHOLD HAZARDOUS WASTE COLLECTION FACILITY

HVAC- HEATING, VENTILATION AND AIRCONDITIONING

Manufacturer Requirements

- One-time Survey
 - By March 2009, submit survey plan and methodology for a survey to provide statistically-valid data on the number thermostats that become waste annually in California
 - By December 1, 2009: complete the survey
 - By December 31, 2009: Present all survey data to the State (DTSC)

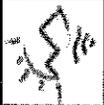

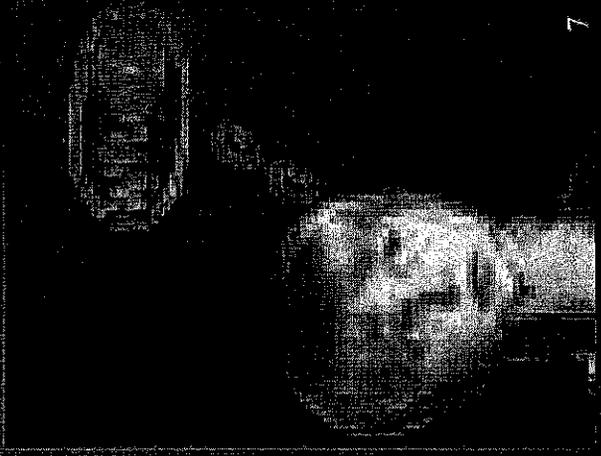

Manufacturer Outreach Requirements

- Develop Public Service Announcements
- Provide education and outreach materials to wholesalers, retailers and others
- These prescriptive requirements expired in December 2011 in expectation of DTSC's regulations...

Who Else Has Obligations under California's Thermostat Law?

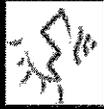

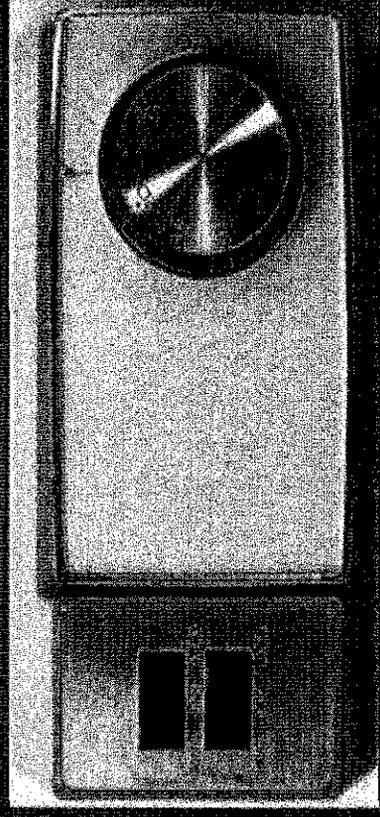

- HVAC contractors, building demolishers (contractors and others)
 - Remove and bring thermostats to a collection location
- Retailers
 - Don't sell thermostats from noncompliant manufacturers
- Wholesalers
 - Collect thermostats
 - Don't sell noncompliant brands

How is TRC Doing in California?

In 2011, TRC reports collecting:

- 18,697 intact mercury thermostats, containing 255.84 pounds of mercury
- This represents 8.4 percent of thermostats available and a 40 percent increase over 2010 collections

TRC Collection Trend...

Year of Collection	2009	2010	2011
Thermostats	7,542	13,340	18,697
Pounds of mercury	104.82	185.80	255.84

TRC Results in Context: vs. Thermostats Available*

Collection Year	2009	2010	2011
TRC data (Thermostats collected)	7,542	13,340	18,697
Available for recycling (SERA Estimates)	237,000	233,000	222,000

*Source: *Mercury-Containing Thermostats: Estimating Inventory and Flow from Existing Residential & Commercial Buildings*. December 28, 2009. Skumatz Economic Research Associates.

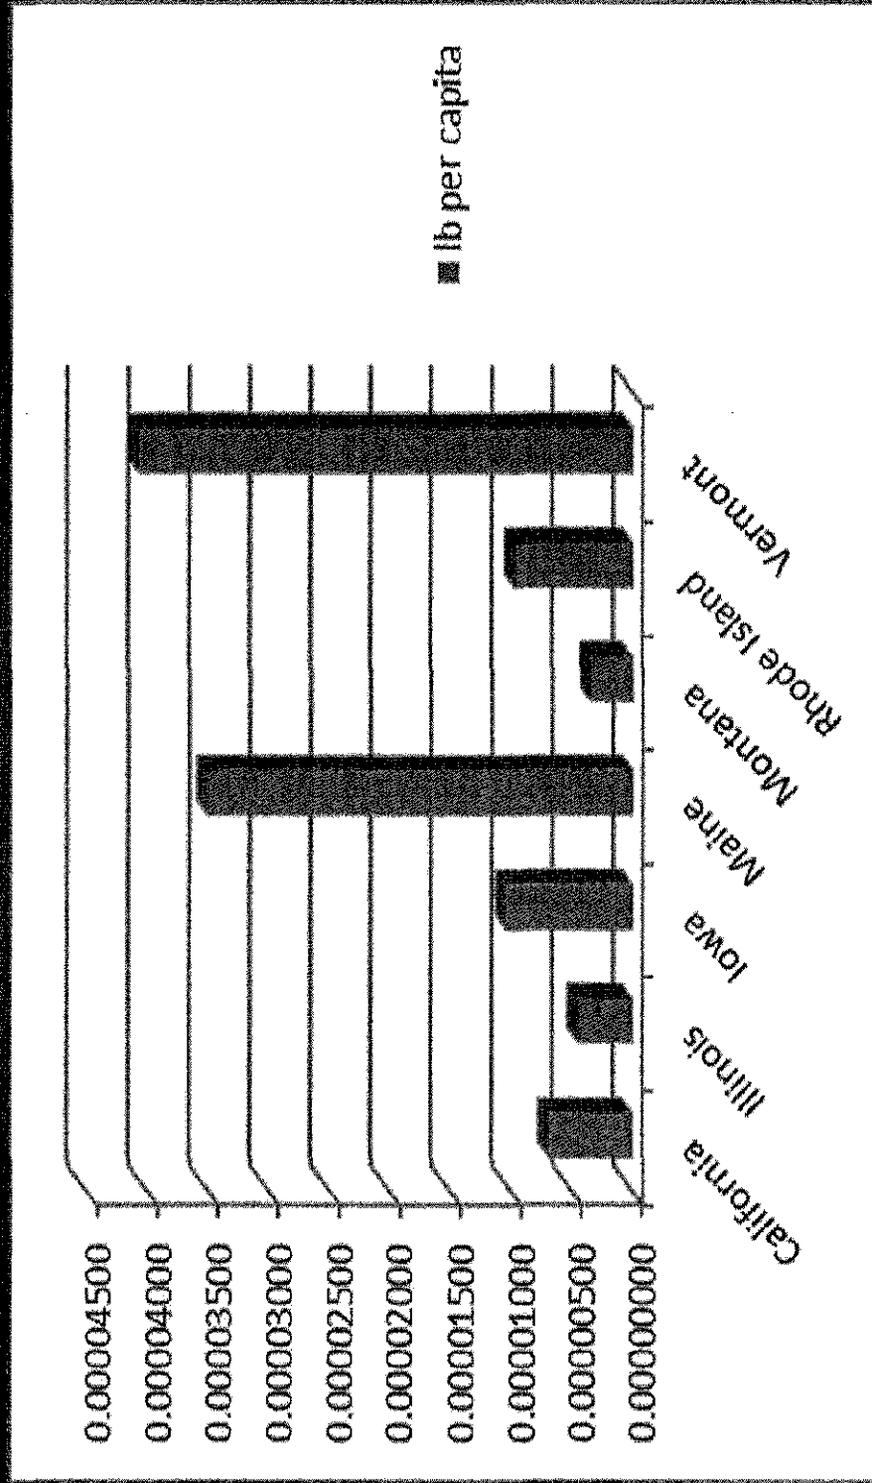

California Results in Context: 2011 Data for Some Other States

State	Total Intact Thermostats	Pounds of Mercury
California	18,697	255.84
Illinois	7,229	58.53
Iowa	3,850	31.63
Maine	6,616	46.36
Montana	274	3.46
Rhode Island	1,068	10.32
Vermont	3,572	25.37

California Results in Context: Mercury Recovered per capita

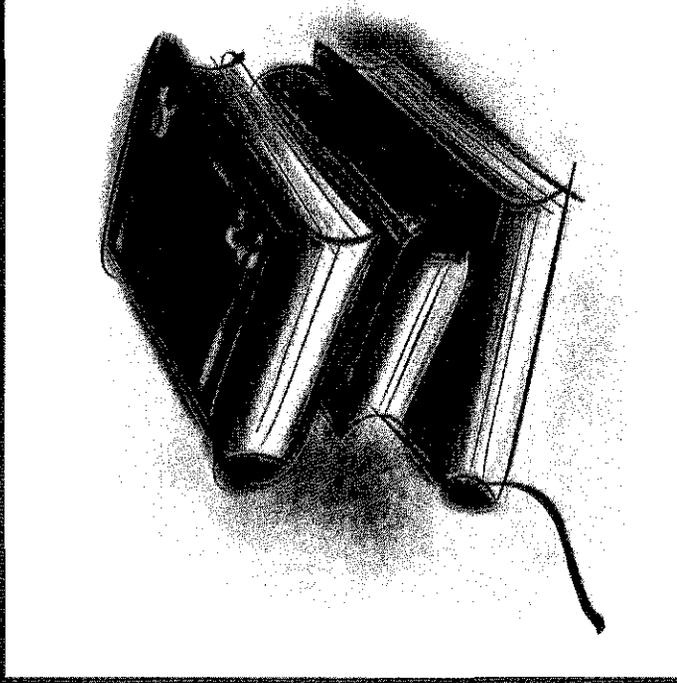

DTSC Efforts to Promote Thermostat Collection

- Outreach to supplement IRC's
 - Web postings
 - Educational Video for Contractors
 - Postcards, flyers, counter signs for wholesalers
- Field visits in 2010 and 2011
 - Some (many?) wholesalers not participating
 - Inadequate manufacturer outreach and education?
 - HVAC contractors feel burdened with various regulatory requirements...

DTSC's Draft Regulations...

- Projected public notice: Early Summer, 2012

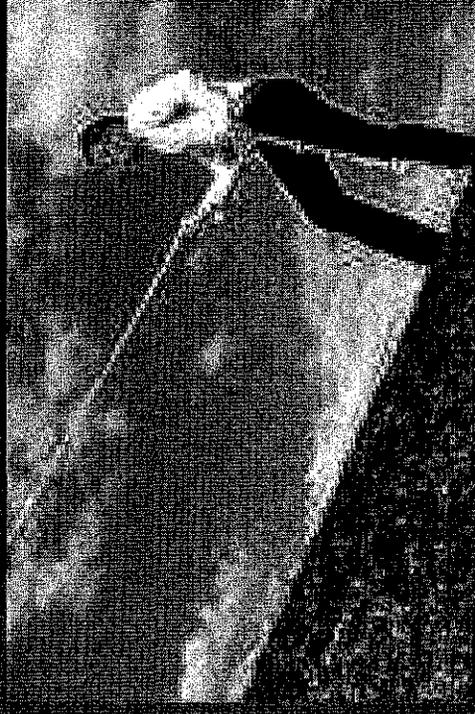

Key Elements of the Current Draft Regulations

- The methodology for determining the annual number of mercury-added thermostats becoming waste based on the manufacturer-funded SERA study
 - Previous proposal relied on contractor reporting after the first two years
- Ambitious collection rate goals from 2013
- Provides for a negotiated agreement on program modification if collection goal is not met

Improving Thermostat Collection Results ...

- Awareness
- Access to program
- Accountability

Thank you...

Eisenberg, Sara J.

From: Chuck Halnan [chuck@halnan.com]
Sent: Monday, October 01, 2012 1:31 PM
To: Eisenberg, Sara J.
Subject: Mercury Thermostat Regulations

In May and June of 2012 I had numerous discussions with DTSC officials concerning the proposed mercury thermostat collection requirements. These meetings were either on the phone or in person and were both one on one meetings as well as group meetings with DTSC staff and the contract lobbyists for manufacturers. From these discussions, it was clear to me that DTSC did not believe manufacturers would be able to achieve the ambitious collection rates set forth in the draft regulations and would likely be forced into some sort of enforcement proceedings almost immediately.

Amend Appendix XII of the California Code of Regulations, title 22, div 4.5, chapter 11.

Insert, in numerical and in alphabetical order within the existing section to read as follows:
(a) Subdivisions (b) and (c) of this appendix establish the California Hazardous Waste Code Numbers assigned to wastes which have been identified as hazardous wastes pursuant to the characteristics of hazardous waste as set forth in article 3 of this chapter or pursuant to the lists of hazardous wastes in article 4 of this chapter. These Waste Code Numbers shall be used in complying with the notification requirements of Health and Safety Code section 25153.6 and, where applicable, in the recordkeeping and reporting requirements under chapters 12 through 15, 18, and 20 of this division.

(b) List of California Hazardous Waste Codes arranged in numerical order:

614 Treated wood waste

(5) California Restricted Wastes:

615 Out-of-service mercury-added thermostats

711 Liquids with cyanides ≥ 1000 mg/l

(c) List of California Hazardous Waste Codes arranged alphabetically within each numbered category in this subdivision:

551 Laboratory waste chemicals

512 Other empty containers 30 gallons or more

615 Out-of-service mercury-added thermostats

541 Photochemical/photoprocessing waste

(5) California Restricted Wastes:

721 Liquids with arsenic > 500 mg/l

NOTE: Authority cited: Sections 25150 and 58012, Health and Safety Code. Reference: Sections 25117.9, 25122.7, and 25150, Health and Safety Code.

Chapter 35 Mercury Thermostat Collection Requirements

§67388.1 Scope

(a) This chapter establishes the requirements for the collection of out-of-service mercury-added thermostats.

(b) Nothing in this chapter is a limitation on the power of any other governmental agency to adopt or enforce additional requirements related to the management of the mercury-added thermostat materials.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.17, Health and Safety Code.

§67388.2 Applicability

Effective January 1, 2012 the requirements of this chapter shall apply to

- (a) Manufacturers as described in section 67388.3.
- (b) HVAC contractors as described in section 67388.3.
- (c) Demolition contractors as described in section 67388.3.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.17, Health and Safety Code.

§67388.3 Definitions

The definitions set forth in section 66260.10 of this division shall apply unless otherwise defined. The following terms shall apply to the definitions used in this chapter. The definitions of the following terms are stated the Health and Safety Code sections unless otherwise noted.

“Collection Rate” means the number of out-of-service mercury added thermostats collected, as reported by a manufacturer or group of manufacturers divided by the calculated number of out of service mercury added thermostats becoming waste annually, as defined in section 67388.4, expressed as a percentage.

“Demolition contractor” has the meaning of a C-21 contractor as defined in Cal. Code Regs., title 16, section 832.21.

“Household hazardous waste collection facility (HHWCF)” has the meaning of a facility as defined in Health and Safety Code, section 25218.1(f).

“Heating, ventilating and air-conditioning (HVAC) Contractor” has the meaning as defined in Cal. Code Regs., title 16, section 832.20.

“Manufacturer” has the meaning as defined in Health and Safety Code, section 25214.8.11(a).

“Mercury-added thermostat” has the meaning as defined in Health and Safety Code, section 25214.8.11(b)

“Out-of-service mercury-added thermostat” has the meaning as defined in Health and Safety Code, section 25214.8.11(c).

“Program” has the meaning as defined in Health and Safety Code, section 25214.8.11(d).

“Retailer” has the meaning as defined in Health and Safety Code, section 25214.8.11(e).

“Thermostat” has the meaning as defined in Health and Safety Code, section 25214.8.11(f).

“Wholesaler” has the meaning as defined in Health and Safety Code, section 25214.8.11(g).

Authority: Section 58012 and 25150 Health and Safety Code. Reference: Section 25214.8.11 and 25218.1, and 25214.8.17 Health and Safety Code. Reference: Cal. Code Regs., tit. 16, §832.20 and 832.21.

§67388.4 Methodology for Calculation of Number of Out-of-Service Mercury Added Thermostats Becoming Waste Annually

(a) For the purpose of the calculation in section 67388.5 the number of out-of-service mercury-added thermostats becoming waste are 222,000 for the 2012 calendar year .

(b) Beginning on March 1, 2013, the department shall post the number of out-of-service mercury-added thermostats that became waste for the previous year based on the following methodology:

Methodology of calculating the annual generation of Waste Mercury Thermostats

$$T_{AW} = T_{HVAC} + T_{UHWM} + T_{HHWCF}$$

T_{AW} = Number of out-of-service mercury-added thermostats that become waste annually

T_{HVAC} = Number of mercury thermostats removed from service as reported by licensed HVAC contractors.

T_{UHWM} = Number of out-of-service mercury reported on Uniform Hazardous Waste Manifests under California Waste Code 615.

T_{HHWCF} = Number of out-of-service mercury thermostats report in the California Household Hazardous Waste Collection Facilities form 303(b).

$$T = (T_{lbs} \times 453.6 \text{ grams/lb}) \div 100 \text{ grams per thermostat}$$

T - Number of out-of-service thermostats collected

Tlbs - Weight of out-of-service thermostats collected

k - Conversion factor for weight of thermostat = 100 grams per thermostat

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.15, 25214.8.16 and 25214.8.17 Health and Safety Code.

§67388.5 Manufacturers' Annual Collection Rate

(a) The annual target collection rate for a manufacturer or a group of manufacturers shall be 20% of the number of out of service mercury added thermostats becoming waste annually.

(b) When the 20% target collection rate is met, the target collection rate for the next calendar year shall increase to 30% of the out-of-service mercury thermostats projected to become waste that year. Each time a target collection rate standard is met in a subsequent year, the target collection rate in the next calendar shall increase by 10% of the out-of-service mercury thermostats projected to become waste that year until the maximum feasible collection rate is achieved.

(c) The department shall assign a percentage of the collection rate to each manufacturer or group of manufacturers based upon each manufacturer's or group of manufacturers' share of total thermostats collected, less orphan product reported by all manufacturers or group of manufacturers.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25218.8.13 Health and Safety Code.

§67388.6 Manufacturer Program Requirements

(a) The Department may order a manufacturer or a group of manufacturers operating a program to revise its program and to undertake actions to comply with Article 10.2.2 of Chapter 6.5, Division 20, of the Health and Safety Code.

(b) The Department may review each manufacturer's or group of manufacturers' program each year, beginning in 2014, to determine whether revisions are needed to each program

(b) In order to assess whether revisions are needed to the program implemented by a manufacturer or a group of manufacturers, the Department shall:

(1) Compare the results of each program with the annual target collection rate specified in section 67388.5;

(2) Compare the results of the program(s) to those of other states where mercury added thermostat collection programs are mandated by law;

(3) Assess economic factors or market conditions that may adversely affect program results;

(4) Assess contractor compliance with sections 67388.7 and 67388.9 and other relevant and applicable provisions of law.

(c) If a manufacturer or group of manufacturers fails to revise its program as directed by the Department, the Department shall post a notice on its Internet Website listing the manufacturer or group of manufacturers as out of compliance pursuant to Health and Safety Code section 25214.8.12.

(d) (1) A manufacturer or group of manufacturers may petition the department to reinstate the manufacturer or group of manufacturers.

(2) A petition submitted pursuant to this subsection shall include an updated plan correcting the deficiencies identified by the department.

(3) The sales prohibition specified in Health and Safety Code section 25214.8.12 shall be suspended during the department's review of the updated plan. This suspension of the sales prohibition shall be posted on the department's Internet Web site.

(4) If the department determines that the updated plan corrects the deficiencies identified pursuant to Section 42992, the department shall list the manufacturer or group of manufacturers as no longer banned. If the updated plan does not correct the deficiencies, the sales prohibition shall be reinstated, and the manufacturer or group of manufacturers shall be posted as non-compliant on the department's Internet Web site.

Authority: Section 58012, 25150, Health and Safety Code. Reference: Section 25180, 25187, 25189.2, 25218.8.13 and 25214.8.17 Health and Safety Code.

67388.7 Contractor Compliance Requirements

(a) Any HVAC contractor or Demolition contractor that removes a thermostat from any location shall determine if the thermostat is a mercury-added thermostat.

(b) Notwithstanding any other provision of law, any mercury-added thermostat removed from service in California by a contractor shall be taken to collection location with a collection container operating in accordance with these regulations.

(c) Notwithstanding any other provision of law, any mercury-added thermostat removed from service in California by a Demolition contractor shall be taken to a location that is authorized to collect out-of-service mercury-added thermostats

(c) A licensed HVAC contractor or a Demolition contractor that takes an out-of-service mercury added thermostat to a location with a collection bin and who properly reports in accordance with section 67388.7 shall not be deemed a generator of that thermostat under title 22, division 4.5 of the California Code of Regulations.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.15 and 25214.8.16, Health and Safety Code.

67388.8 Household Compliance Requirements

(a) Any person who maintains a household as defined in section 66273.9 and who removes a mercury added thermostat from that household without the assistance of a licensed contractor is subject to the requirements of section 66273.8.

(b) Any person who maintains a household as defined in section 66273.9 and hires a licensed contractor to remove a mercury added thermostat from that household shall relinquish possession of the thermostat to the contractor for proper handling.

Authority: Section 58012, 25150 and 25154, Health and Safety Code. Reference: Section 25154, 25214.8.15 and 25214.8.16, Health and Safety Code.

§67388.7 9 Reporting Requirements

(a) **Thermostat Manufacturer Group Programs:** In the annual report submitted to the department, each group of manufacturers operating a program collectively shall include the following information: (1) Household Hazardous Waste Collection Facility, Retailer, HVAC contractor, or HVAC wholesaler name and physical street address.

(2) For the previous calendar year, the date(s) the program received waste shipment(s) of mercury thermostats from the collection points, the collection point name, count of thermostats, count of mercury switches from collection point, number of loose switches, and pounds of mercury.

(3) For the previous calendar year, the number of whole thermostats collected by the name of manufacturer participating in the program.

(4) For the previous calendar year, the number of thermostats collected of indeterminate manufacturer.

(5) For the previous calendar year, the number of loose mercury switches recovered and the conversion factor for determining the number of whole thermostats the loose mercury switches represent.

(b) **Thermostat Manufacturer Individual Programs:** In the annual report submitted to the department, each manufacturer operating a program individually shall include the following information:

(1) Household Hazardous Waste Collection Facility, Retailer, HVAC contractor, or HVAC wholesaler name and physical street address (e.g. shipping address).

(2) The date(s) the thermostat manufacturer received waste shipment(s) of mercury thermostats from the collection point(s), collection point name, count of thermostats, count of mercury switches from collection point, number of loose switches, and pounds of mercury.

(3) The number of thermostats collected by the name of manufacturer. The number of thermostats collected of indeterminate manufacturer.

(4) The number of loose mercury switches recovered

(c) **Thermostat Retailers/Wholesalers Distributing by Mail**

(1) In the annual report submitted to the department, each thermostat retailer or wholesaler that distributes new thermostats by mail in the state shall include the following information: (2) The number of requests for pre-paid shipping labels. (3) For the previous calendar year, the number of thermostats collected and when identifiable the brand name of the manufacturer

(d) Contractor Reporting Requirements: Beginning January 1, 2013, each HVAC contractor shall submit, to the department, an annual report for period beginning January 1 and ending December 31 for the previous calendar year. Annual reports shall be submitted in an electronic format provided by the department within 60 days of the end of each reporting period.

(1) Each annual report shall include the following:

(A) The business location and mailing address;

(B) Contractors state license number;

(C) Name, address and telephone number of contact person with knowledge of reported mercury thermostat removals;

(D) The current number of service technicians employed by the contractor;

(E) The number of mercury thermostats removed from service by the contractor name and location of the collection point(s) where mercury thermostats are disposed of.

(2) Notwithstanding the exemption provided for by section 66273.8, a HVAC contractor shall keep a record of annual reports on site for 3 years.

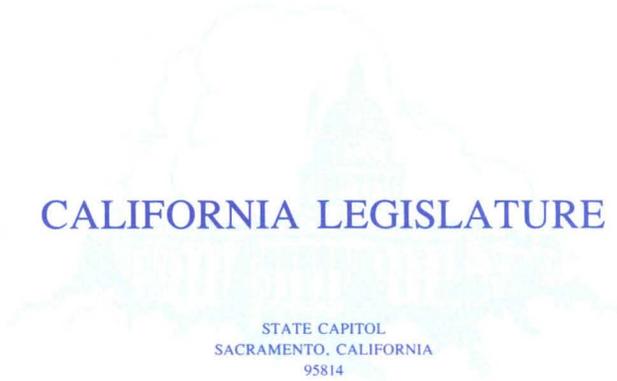

(3) In addition to the reporting requirements in subsection (c), HVAC contractors shall keep written records on site for the following information:

(A) Date and customer location of each mercury thermostat replacement;

(B) Count of mercury thermostat(s) removed from each location;

(C) Location, date, and count of mercury thermostats disposed of at collection location.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.13, 25214.8.15, 25214.8.16 and 25214.8.17 Health and Safety Code.

CALIFORNIA LEGISLATURE

STATE CAPITOL
SACRAMENTO, CALIFORNIA
95814

September 28, 2012

Debbie Raphael, Director
Department of Toxic Substances Control
1001 I Street
Sacramento, CA 95814

Regarding: DTSC Proposed Regulations for Mercury Thermostat Collection and Performance Requirements

Dear Director Raphael,

We are writing to express our strong support for the recently proposed mercury thermostat regulation that is legally required by the Mercury Thermostat Collection Act of 2008. We urge the Department of Toxic Substances Control (DTSC) to move forward as swiftly as feasible to finalize this important regulation by the end of this year.

According to the Thermostat Recycling Corporation (TRC)'s own calculations, in California alone, between 222,000 – 460,000 out-of-service mercury-added thermostats will become waste in 2012. Taking the mid-point of this range, and assuming an average of 4 grams of mercury per thermostat, these thermostats will contain roughly 1.5 tons of mercury. Any source of mercury pollution of that magnitude warrants a strong DTSC response that effectively addresses this preventable threat to human health and the environment.

DTSC's mercury thermostat regulation is an important step to prevent further mercury contamination. As the legislation requires, this regulation offers a pragmatic approach to mercury disposal by placing the responsibility on the companies that sell their products in California. This regulation is needed because the voluntary collection program for used thermostats that the TRC has operated over the past decade has failed to divert any significant amount of mercury from the waste stream. In California, this program is capturing less than 10% of the mercury thermostats becoming waste, an unacceptably low rate that DTSC must correct through these rules as soon as possible.

Director Debbie Raphael
September 28, 2012
Page 2

We are fully aware of the contribution manufacturers of thermostats have made in improving energy efficiency, which reduces fossil fuel use and helps address climate change. With this proposed regulation, California ensures that the devices which aid our energy conservation do not contaminate our environment with toxic mercury.

We commend the department for its hard work on mercury thermostat collection and we urge a swift conclusion to the rulemaking so that greater numbers of mercury thermostats are collected and disposed of properly. Please move forward to finalize and adopt this regulation as soon as possible.

Sincerely,

Re: **Comment on *Mercury Thermostat Collection and Performance Requirement***
Department Reference Number: R-2010-03

Dear Ms. Von Burg:

The California Association of Sheet Metal and Air Conditioning Contractor's National Association (CAL SMACNA) is pleased to support the 45-Day language as proposed for the implementation of the *Mercury Thermostat Collection and Performance Requirement*.

The contractor members of CAL SMACNA have reviewed the proposed language and are pleased to see the revisions adopted by DTSC align this regulatory effort with the intent and authority of the original statutes. Specifically, by embracing the extended producer responsibility model, this language appropriately places the primary responsibility and costs of collecting and managing out-of-service mercury-added thermostats upon the manufacturers and NOT California small businesses. This is consistent with the legislative proceedings and authority provided to DTSC by AB 2347 (Ruskin).

The prior draft of these regulations would have produced highly questionable compliance rates while simultaneously placing an inordinate financial burden on both small businesses and the DTSC to oversee and enforce the program.

CAL SMACNA appreciates the fact that DTSC listened to public comments, worked with the field, and increased it's understanding of the practical application of any proposed regulation. The current draft language reflects these successful efforts by DTSC and will undoubtedly result in far higher compliance rates at a much lower cost and impact on California small businesses.

We look forward to working collaboratively with the DTSC as we move forward together in the implementation of the regulations originally envisioned by the Legislature in 2008. If you should have any questions, or need additional information, please do not hesitate to contact me at (916) 363-7460.

Subject: Mercury thermostats regs - comments from CalRecycle - due Oct 2

Hello Neena,

Thank you for providing the information below. We've had a chance to review the proposed mercury thermostat regulation and wanted to offer some general thoughts. DTSC may want to further consider, as it develops its regulations and provides oversight and enforcement of the program, if additional language is needed to better ensure a level playing field among participants, e.g., clear consequences of not participating, ensuring information that is reported is correct, those performing audits have qualifications and follow minimum standards.

FYI, below are some of the basic elements we believe are needed to provide for an effective EPR program, recognizing that each product is different and the approaches will vary. We also recognize that AB 2347 does not require some of the key components below, such as stewardship plan submittal and approval, or approval of annual reports, therefore not all of the elements will apply to the proposed regulations. Others are already covered either in statute or the proposed regulations. Indeed, one of EPR's attributes is the flexibility in design and implementation approaches. We look forward to program implementation and continuing to learn from these first EPR programs in California!

An effective EPR program **MUST** provide manufacturers/first sellers and renovators with the option to form a stewardship organization and **REQUIRE** sustainable funding, stewardship plans, enforceable goals, and reporting from manufacturers, and oversight and enforcement by state government (paid for by the funding mechanism). Key components include:

- a. Purpose, Scope, and Goals
- b. Definitions
- c. Manufacturers/brand owners are allowed to form a stewardship organization to prepare, manage, and implement a stewardship plan on its behalf
- d. Stewardship Plans must be submitted by a certain date that contain these basic elements:
 - i. List of manufacturers/brand owners covered under plan
 - ii. Funding mechanism and budget sufficient to carry out the plan, including administrative, operational, and capital costs, and payment of fees and/or incentive payments to cover costs of services provided;
 - iii. How the plan will achieve the purpose and goals
 - iv. How the plan is consistent with the state's solid waste management hierarchy
 - v. Education and outreach efforts
 - vi. How citizens across the state will have convenient collection
 - vii. Process for independent audits
- e. Annual reporting and process for updating plans/reports
- f. State oversight: state government shall approve, conditionally approve, or disapprove plans and annual reports.
- g. Transparency: process for stakeholder participation in developing plans, key documents are easily available on internet
- h. Level playing field: enforcement with penalties on non-compliance manufacturers/brand owners; and payments to state for providing oversight and enforcement services.

Best regards,

Californians Against Waste

Conserving Resources. Preventing Pollution. Protecting the Environment.

Re: DTSC Proposed Regulations for Mercury Thermostat Collection

Dear Director Raphael,

Thank you for the opportunity to comment on the Mercury Thermostat regulation. These long overdue regulations represent a critical step to address a significant source of mercury pollution.

Relying on the industry to accomplish the intent of AB 2347, has, thus far, proven to be a failure. The industry collected a measly 3.2% of the mercury thermostats generated in 2009, representing only a paltry increase over the 2.9% recycled prior to the passage of the law.

In order to meet its obligation to protect public health and the environment and achieve the goals of AB 2347, DTSC has a responsibility to utilize every authority and opportunity provided by current law to try to increase recycling of toxic thermostats. Specifically, the law gives DTSC the authority to set the performance rate requirement. The Act also authorizes DTSC to order manufacturers to revise their programs and undertake actions to comply with the law. If a manufacturer fails to meet their quota, they face a sales prohibition of their product in California.

DTSC's proposed methodology relies upon the low-end estimate of the Thermostat Recycling Corporation (TRC)'s own calculations, likely underestimating the actual number of discarded thermostats, and setting an artificially low bar for the industry. We are urging DTSC to use the high-range value in the TRC 2009 Waste Flow Report to ensure a conservative implementation of the legislation. Each mercury thermostat that goes into a landfill represents a violation of CA law and an addition to the build-up of a potent neurotoxin in our environment. Because the highest numbers of thermostats will be discarded during the earlier years of the program, recovering most of these thermostats is an urgent health and safety priority.

Financial incentives have proven to be the best way to raise recycling rates, as proven by the incredible success of recycling under the state's Bottle and Can Deposit law. Similarly, AB 2347 specifically requires manufacturers to provide direct incentives to promote the recovery of thermostats.

*HSC 25214.8.13 Each manufacturer **shall** individually, or collectively with other manufacturers, do all of the following:*

(g) Provide incentives and education to contractors, service technicians, and homeowners to encourage the return of out-of-service mercury-added thermostats to established collection locations.

However, the manufacturers have, thus far, failed to follow the law, and they have not developed any sort of direct incentive program. In the proposed regulations, DTSC has clearly defined what “incentives” are, and TRC now has an unambiguous standard that it needs to comply with. Should TRC fail to meet the required collection rate performance for a given year, we urge DTSC to move promptly to evaluate the amount and form of the appropriate financial incentive required to achieve the necessary program improvements.

While we are confident that DTSC will exercise its ability to fully enforce the law if manufacturers fail to meet the collection goals, the clock for the ‘soft’ and ‘flexible’ approach afforded to thermostat manufacturers in AB 2347 is running out. If this approach—utilizing all the available authority, tools and proven incentives, does not result in a substantial increase in thermostat recycling over the next 18-24 months, than stakeholders will have no choice but to pursue a more direct producer responsibility approach in order to attain the necessary hazardous waste reduction and recycling goals.

We urge a swift conclusion to the rulemaking so that greater numbers of mercury thermostats are collected and properly disposed of. Thank you for your consideration.

Sincerely,

**Re: Comment on Mercury Thermostat Collection and Performance Requirement
Department Reference Number: R-2010-03**

Dear Ms. Von Burg:

On behalf of the California Legislative Conference of the Plumbing, Heating and Piping Industry (CLC), I am pleased to alert you of our support for the proposed 45-Day language relating to the implementation of the "*Mercury Thermostat Collection and Performance Requirements*."

The CLC was actively involved in developing the legislative authority for these regulations and we are satisfied that the revisions to these regulations adopted by Department of Toxic Substances Control (DTSC) now follow the intent and authority of the original statutes. Specifically, by embracing the extended producer responsibility model, this language appropriately places the primary responsibility and costs of collecting and managing out-of-service mercury-added thermostats upon the manufacturers and not California small businesses. This is consistent with the legislative intent and authority provided to DTSC by AB 2347 (Ruskin).

The prior draft of these regulations would have produced questionable compliance rates while placing an excessive financial burden on both small businesses and the DTSC to oversee and enforce the program.

We appreciate that the DTSC listened to public comment and worked with industry to understand the practical applications of the proposed regulations. The regulatory language as proposed will result in higher compliance rates at a much lower cost and impact on California small businesses. For these reasons we are in support.

If you should have any questions, or need additional information, please contact our office.

Kindest Regards,

Regarding: DTSC Proposed Regulations for Mercury Thermostat Collection Program

Dear Director Raphael,

The California Product Stewardship Council (CPSC), as a co-sponsor of the Mercury Thermostat Collection Act of 2008 (Act), is writing to express strong support for the recently proposed mercury thermostat regulation that is legally required by the Act. We urge the Department of Toxic Substances Control (DTSC) to move forward quickly to finalize the regulation by the end of this year, as this rulemaking is already a year behind the legislatively required schedule of January 1, 2012.

According to the Thermostat Recycling Corporation (TRC)'s own calculations, in California alone between 222,000 – 460,000 out-of-service mercury-added thermostats will become waste in 2012. Taking the mid-point of this range, and assuming an average of 4 grams of mercury per thermostat, these thermostats will contain roughly 1.5 tons of mercury. Any source of mercury pollution of that magnitude warrants a strong DTSC response which effectively addresses this preventable threat to human health and the environment.

DTSC's mercury thermostat regulation is an important step to prevent further mercury contamination, and time is of the essence. This regulation is needed because the collection program for used thermostats that the TRC has operated is capturing less than 10% of the mercury thermostats becoming waste in California. This is an unacceptably low rate, which DTSC must correct through these rules as soon as possible. Attached is a letter CPSC sent to DTSC June 29, 2011, that outlines the many efforts we have made to ensure this program is successful, and also the many reasons we are disappointed with the lack of effort to recover the vast majority of thermostats from the waste stream.

We commend the agency for its hard work on mercury thermostat collection, and urge a swift conclusion to the rulemaking so that greater numbers of mercury thermostats are collected and properly disposed of. Please move forward to finalize and adopt this regulation as soon as possible.

Sincerely,

Heidi Sanborn, Executive Director

Attachment: Letter from CPSC to DTSC June of 2011

Cc: Matt Rodriguez, Secretary, California Environmental Protection Agency

June 29, 2011

Ed Benelli
Office of Pollution Prevention and Green Technology
Department of Toxic Substances Control
Sent Via E-mail: thermostats@dtsc.ca.gov

Subject: Comments on Draft Thermostat Regulations

Dear Mr. Benelli:

The California Product Stewardship Council (CPSC), a co-sponsor of the Mercury Thermostat Collection Act of 2008 (Act), appreciates the work that department staff have put into the draft regulations to implement the Act. We believe that the draft closely follows both the letter and intent of the law, and we support its structure and primary elements. This letter will detail our position, and include recommendations that we believe would improve the draft regulations.

CPSC participated directly in the legislative negotiations and has gone into the implementation phase of the Act in acknowledgement of a shared responsibility system with the retailers and producers. Here is a short list of the support and partnership CPSC has provided:

- Facilitated and funded a statewide webinar December 16, 2009 to educate the local governments and other parties about the new program and included presentations by thermostat producers;
- In several counties including Yolo and Napa, conducted site visits and reported back to producers when wholesalers did not have bins or public education materials and encouraged them to sign-up;
- Forwarded information to producers when we were made aware of opportunities for public education or when the website was not accurate;
- Published TRC information on the CPSC website;
- Promoted the TRC program at multiple presentations and venues; and,
- Wrote an article which we submitted to the Contractors State Licensing Board and they put in their newsletter to the 11,000 HVAC contractors about the law.

In short, we feel that we have done all we can to support the producers to be successful.

The hazards posed by mercury are well-documented so we will not get into those details. In addition, mercury thermostats are 100% banned from landfill disposal creating an unfunded burden on local governments and waste haulers. At the workshop on the draft regulations, DTSC stated that “first year collection totaled 3.2% of what the Skumatz study estimated would be generated.” The fact is that thermostats contain a potent neurotoxin that is banned from landfill disposal and we currently do not have an effective collection program. These facts can lead to the assumption that an estimated 96% of the mercury thermostats are going into landfills and creating a liability for local governments and

taxpayers, not to mention the resulting health and environmental impacts that can occur from mercury releases.

To say we are disappointed with this performance is an understatement.

The Act established an Extended Producer Responsibility (EPR) system for mercury thermostats, and delegates to the Department of Toxic Substances Control (DTSC) the task of setting recycling rates and methodology. The Act also directed the manufacturers to “present to the department a survey plan and methodology for a survey to provide statistically valid data on the number of mercury-added thermostats that become waste annually in California.” The Thermostat Recycling Corporation (TRC) fulfilled this responsibility with the December 2009 study by Skumatz Economic Research Associates. The study found that between 5.1 million and 10.6 million mercury-containing thermostats remain in use in California.

Because the highest numbers of thermostats will become waste during the earlier years of the program, as the Skumatz study found, recovering most of those thermostats should be an urgent priority for DTSC. Therefore, we believe the first year recycling rate of 20% is achievable, especially considering that the law was enacted in 2008, providing years of notice to the manufacturers that they would need to ramp up recycling efforts.

Each mercury thermostat that goes into a landfill represents a violation of California law and an addition to the build-up of a potent neurotoxin in our environment. Therefore, the recycling rate of 80% for 2015 and beyond is fully justified.

Similarly, the contractor reporting requirements in the draft are necessary to prevent waste thermostats from going into landfills and to bridge the gap between waste generators and thermostat manufacturers. The reporting can be easily carried out by contractors using the tools DTSC provides.

Enforcement will be vital to implementing the Extended Producer Responsibility requirements. Retaining the back-up requirement for financial incentives is vital in the event that manufacturers fail to meet the collection goals or do not quickly propose program changes to achieve those goals. The Act specifically lists “provides incentives” as one of the means manufacturers must use to encourage return of thermostats, and it also authorizes DTSC to order manufacturers to revise their programs and undertake actions to comply with the law, so DTSC has the authority to require incentives if they become necessary.

Financial incentives have proven to be the best way to raise recycling rates especially in a short period of time. In California, we have a long history of using financial incentives to ensure products are returned for proper management including programs for beverage containers, oil, and most recently, for small containers of automotive refrigerant which became effective January 1, 2010. A recent e-mail sent to the interested parties from the Air Resources Board explained the program as follows:

At the time of purchase, the DIY consumer pays a \$10 refundable deposit to the retailer for each container. In order to get the refund, consumers are required to return the used, undamaged container(s) within 90 days with a receipt. Retailers and distributors collect the used containers for return to a recycling

facility with the assistance of the product manufacturer. The target recycle rate is initially set at 90%, and rises to 95% beginning January 1, 2012.

So, we would argue that if we use financial incentives for bottles and cans which are a litter problem and have no health impacts, and for oil and most recently, the ARB imposed a \$10 per can deposit on refrigerants with a first year goal of 90% and target recycling rate of 95% two years later, that in balance it is just as important to protect the environment from climate change as it is to protect the public from the long-term health and economic impacts from mercury releases.

With that said CPSC is also a supporter of having business determine how to meet performance goals and hopes that thermostat manufacturers will quickly admit that 3.2% is an inadequate collection rate and propose significant and immediate changes to the program to dramatically improve the collection rate in California. Defending the existing program is not taking responsibility for the performance outcome.

In Section 67388.6, we recommended the regulations should be strengthened with transparency provisions. The regulations should provide that, when the enforcement process involves a consent agreement between DTSC and the manufacturers, the public has a right to participate in that process. Local governments, health and environmental groups, and other interested parties should be able to be heard, and the agreement should not be negotiated behind closed doors by the manufacturers and DTSC.

Also, in section 67388.7, in the interest of transparency, the regulations should require the manufacturers to submit to DTSC the following:

- Administration costs of the program in California;
- As part of their annual reports, state-by-state data on thermostat collection. This will allow California to use other states' programs as benchmarks, and to learn from best practices such as those in Maryland that are achieving better collection rates; and,
- Ongoing annual expenses for program operations in California.

It is not clear to us that any real investment has been made in California as there are no staff present here or consultants working in California. We feel to effectively provide oversight in a state as large and diverse as California, dedicated staff should be provided.

To summarize, CPSC has worked diligently for years to assure this first EPR program in California was a success. We are very disappointed with the lack of focus and investment in California to make this program even marginally successful. We sincerely hope that TRC and the industry realizes that what is happening is indefensible and they reach out to work with us again to design and implement a program that meets the intent of law – "Provide for the collection and recycling of the maximum feasible number of out-of-service mercury thermostats."

Thank you for your consideration of our suggestions.

Sincerely,

Heidi Sanborn, Executive Director

ENVIRONMENTAL LAW & POLICY CENTER

Debbie Raphael, Director
Department of Toxic Substances Control
1001 I Street
Sacramento, CA 95814

Regarding: DTSC Proposed Regulations for Mercury Thermostat Collection and Performance Requirements

Dear Director Raphael,

On behalf of the above-signed organizations, we submit these comments in support of the Department of Toxic Substances Control (DTSC) proposed regulations on mercury thermostat collection. These regulations represent a critical step to address a significant source of mercury pollution, and are already overdue.

The Mercury Thermostat Collection Act of 2008, Assembly Bill 2347, requires manufacturers to establish a collection and recycling program for out-of-service mercury-added thermostats. This program should collect and recycle the "maximum feasible" number of out-of-service mercury added thermostats.¹ To meet this objective, the statute authorizes DTSC to require revisions to manufacturers' collection programs and to undertake other actions to comply with the article.² The statute further requires manufacturer collection programs to provide both incentives and

¹ H&S Code § 25214.8.20

² Id. § 25214.8.17.

education to contractors, service technicians, and homeowners to encourage the return of out-of-service mercury added thermostats.³

Mercury is a danger to the development of the human fetus and young children. The federal Centers for Disease Control and Prevention estimate that between 300,000 and 630,000 infants are born in the United States each year with mercury levels that are associated, at later ages, with the loss of IQ. Evidence indicates that methyl mercury exposure may also increase the risk of cardiovascular disease in humans, especially adult men.

According to the Thermostat Recycling Corporation (TRC)'s own calculations, in California alone between 222,000 – 460,000 out-of-service mercury-added thermostats will become waste in 2012. Taking the mid-point of this range, and assuming an average of 4 grams of mercury per thermostat, these thermostats will contain roughly 1.5 tons of mercury. Any source of mercury pollution of that magnitude warrants a strong DTSC response which effectively addresses this preventable threat to human health and the environment.

The Regulations Are Critical Because Voluntary Efforts Thus Far Have Failed

DTSC's proposed regulations are all the more essential because of the inadequate mercury thermostat collection program in California and nationally currently operated by the manufacturers through TRC. As we documented in *Turning Up the Heat*, a report referenced by the Department in its Initial Statement of Reasons,⁴ fewer than 5% of mercury thermostats becoming waste are collected by TRC nationally. In California, TRC collected 19,927 thermostats in 2011, representing between 4.1 - 8.5% of the mercury thermostats becoming waste in this state last year. Thus, even three years after the passage of California's mercury thermostat collection legislation, the TRC program fails to collect the vast majority of available mercury thermostats in this state, resulting in substantial and avoidable mercury releases.

TRC obscures this poor performance in two significant ways. First, beginning in 2009, TRC ceased to release state-by-state thermostat collection results, except in states where they are required to do so by law. Limiting the data availability in this way results in a complete lack of program accountability.

Second, TRC uses increases in collection numbers from year to year as its measure of success, even where it's clear only a small fraction of mercury thermostats are still being recycled. The most recent manifestation of this TRC strategy can be found in its 2011 annual report.⁵ Rather than providing actual thermostat collection results, TRC created the Mercury Recovery Index (MRI), which is simply the percentage increase or decrease in the amount of mercury collected

³ Id. § 25214.8.13(g).

⁴ Initial Statement of Reasons, p. 4.

⁵ Keeping Mercury Out of the Waste Stream – One Thermostat At A Time, 2011/2012 Progress Report (hereafter "TRC 2011 Annual Report"), TRC, available at <http://www.thermostat-recycle.org/files/media/20120808125856.pdf>.

in a state program each year versus a 2007 base year.⁶ However, as illustrated by TRC's Texas example, when a state program starts at an exceedingly low level of performance, large percentage increases are not necessarily indicative of a substantial percentage of thermostats in that state actually being collected.

In its 2011 report, TRC describes the Texas program as a huge success story, because the MRI is up 400% since 2009, largely due to the actions of one wholesale company. However, TRC fails to note that very few mercury thermostats were collected in 2009 and before. Using previously released data from TRC, only 344 mercury thermostats were collected in 2007, the base year for TRC's MRI. In 2008, 1,820 thermostats were collected, again based on data TRC previously released. From these data, using the MRI as a guide, the Texas program results were worse for 2009 than 2008; we estimate about 960 thermostats were collected given the magnitude of the MRI decline. So the increases TRC touts are measured off a Texas program that was collecting fewer than 1,000 thermostats, in a state with a population in excess of 25 million.

Therefore, even after the increases in 2010 and 2011, we estimate the Texas program still collected less than 5,000 thermostats in 2011, as compared to the Maine program which collected over 1,500 more thermostats in the same year with a population 20 times smaller. Or to put it another way, given the size of the Texas population, the TRC program is still not collecting the vast majority of mercury thermostats becoming waste in Texas.

Through the DTSC regulations, the TRC program will need to become accountable. Program performance will finally be judged by the relevant measure of percent of available mercury thermostats captured, and program enhancements will be evaluated and imposed when those capture rates are not achieved. The DTSC rules are of paramount importance in this regard. Our comments below on the details of DTSC's proposal are meant in part to reflect modifications which will enhance DTSC's ability to provide this accountability, particularly our comments related to reporting on programs in other states and the methodology for determining the number of thermostats becoming waste.

Comments on Specific Regulations Proposed

Definitions

We support the proposed definition of "incentive" in DTSC's proposal to clarify that the intent of California law is to provide a financial incentive for contractors, service technicians, and homeowners to encourage the return of out-of-service mercury thermostats. This clarification is needed due to TRC's steadfast opposition to introducing financial incentives on its own accord, notwithstanding the continued unsatisfactory performance of its program in California and the demonstrated success in achieving high collection rates elsewhere achieved through this

⁶ TRC 2011 Annual Report, p. 13.

mechanism. With this clarification, should TRC fail to meet the required collection rate performance for a given year, DTSC can move promptly to evaluate the amount and form of the appropriate financial incentive required to achieve the necessary program improvements.

This emphasis on the financial incentive as a necessary program enhancement is properly placed by DTSC, given the only two state programs now with mandated financial incentives (Maine, Vermont) consistently rank among the top three collection programs nationally on a per capita basis.⁷ This is not an accident, and is in fact perfectly logical given human behavior generally.⁸

Methodology for Determining Number of Mercury Thermostats Becoming Waste

We support DTSC's decision to calculate the number of the mercury thermostats becoming waste in California based on the TRC sponsored research and results mandated by the Legislature precisely for this purpose.⁹ Under Health and Safety Code section 25214.8.17(b), DTSC is required to adopt a methodology for calculating the number of out-of-service mercury thermostats becoming waste in California annually, and using this number as the denominator, develop collection rate performance requirements for the manufacturers' collection (TRC) program. In anticipation of the instant rulemaking, the Legislature required TRC to first develop and then implement a survey to provide "statistically valid data" on the number of mercury thermostats becoming waste in California. See Section 25214.8.18 of the Health and Safety Code. Accordingly, DTSC's decision to rely on the TRC 2009 Waste Flow Report was anticipated (and arguably compelled) by the Legislature.

Moreover, the TRC 2009 Waste Flow Report itself indicates the methodology and data contained therein satisfies both the Legislature's and DTSC's need for "statistically valid data" to rely upon in the instant rulemaking. The introduction of the Report reads, in pertinent part:

*The State of California requires delivery of a "study" that provides estimates of the number of thermostats potentially available for disposal/recycling/management. This chapter describes the approach we used to provide **high quality, defensible estimates** of –*

- *The inventory or "count" of thermostats in place in California households and businesses; and*

⁷ See e.g., Turning Up the Heat, Exposing the Manufacturers' Lackluster Mercury Thermostat Collection Program, Clean water Action, February 2010; Initial Statement of Reasons, p. 11, fn. 8.

⁸ Vermont reports a 45% increase in mercury thermostat collection after the first full two years of their cash incentive program. See Annual Report on Mercury Thermostat Collection Program, Vermont Agency of Natural Resources, January 2012, p. 5.

⁹ Mercury Containing Thermostats: Estimating Inventory and Flow from Existing Residential & Commercial Buildings, prepared for TRC by Skumatz Economic Research Associates (SERA), dated December 28, 2009 (hereafter "TRC 2009 Waste Flow Report").

- *The annual “flow” of this equipment out of the buildings, potentially subject to capture through a thermostat recycling program.*¹⁰

Indeed, the only aspect of the TRC 2009 Waste Flow Report where significant uncertainty is expressed concerns the percentage of thermostats coming off the wall which contain mercury. In that regard, the TRC report provides a range based upon sampling visits and other data collected. DTSC’s proposed methodology relies upon the low-end estimate within the range, and thus DTSC has chosen the most conservative values for the number of mercury thermostats becoming waste in California, likely underestimating the actual number.¹¹ While we would favor using the mid-range value in the TRC 2009 Waste Flow Report, because of the prospect of underestimating the actual number of mercury thermostats becoming waste in California using the low-end values, DTSC’s abundance of caution in how it has used the Report mandated by the Legislature further reinforces the sound basis for relying upon it.¹²

Under proposed section 66274.4(c) and (d), DTSC provides an opportunity for manufacturers to propose alternative estimates of the number of mercury thermostats becoming waste in California, and requires DTSC to consider amending these rules in the future should valid data be provided. While we are not opposed to these provisions conceptually, we believe DTSC should provide greater emphasis on reviewing the methodology manufacturers may employ before the data are collected, to ensure any data collection activities undertaken for this purpose have been subject to a prior stakeholder and technical review process. We believe such a process was mandated by the Legislature, and in any case, will result in higher quality data to be submitted.

Regarding the legal mandate, we note that in advance of the TRC 2009 Waste Flow Report, the Legislature required TRC to submit a “a survey plan and methodology” to DTSC nine months before the Report itself. See Section 25214.8.18 of the Health and Safety Code. DTSC subsequently solicited stakeholder input on the proposed TRC methodology. If DTSC is now making opportunities within this rulemaking for the manufacturers to modify their previous submission, we believe any proposed modifications should follow the review process dictated by the Legislature, particularly submission of the methodology first for review.

Significantly, the opportunity for prior technical review will yield a better result once the data are provided. As DTSC may recall, it was following the review process that TRC added the validation activities to its methodology for the 2009 Waste Flow Report, because of concerns raised by stakeholders. Similar input and the need for modifications can be expected in any future endeavor.

¹⁰ TRC 2009 Waste Flow Report, p. 8 (emphasis added).

¹¹ Initial Statement of Reasons, p. 10.

¹² TRC itself acknowledged that for one year at least, its 2009 Waste Flow Report provided a sufficient basis for determining the number of mercury thermostats becoming waste. In its proposed changes to the rules submitted to DTSC in October 2011, TRC proposed 222,000 thermostats as the value for 2012, and the sole basis for this value is the low end of the range for year 3 in the TRC 2009 Waste Flow Report.

To facilitate DTSC's revisions to the proposed rules, we provide below our recommended changes to proposed 66274.4(c) to address the above comments.

(c) A manufacturer or group of manufacturers may submit to the department additional data on the number of mercury-added thermostats estimated to remain in use in California and the number of these thermostats that will become waste in each year. At least nine months prior to making such a submittal, a manufacturer or group of manufacturers shall provide the department with a proposed plan and methodology for obtaining the additional data. Any data submittal by a manufacturer or group of manufacturers pursuant to this subsection shall include all raw data, formulas, assumptions, models and calculations used, sufficient to allow the department to replicate the manufacturer's or group of manufacturer's calculations.

Proposed Collection Rates

We have two comments on the proposed collection rates. The first comment concerns the mandated collection rates in the initial several years, and the second concerns the ultimate collection rate anticipated under the proposal.

The first few years of this program are especially critical because more mercury thermostats will be coming out of service in those years. Under the proposed rules, the proposed collection rates are 30% for 2013 and 45% for 2014. In our view, these collection goals are not as ambitious as they could be given TRC has had three years to prepare for this day. TRC's failure to capture more than 10% of available mercury thermostats in California until now should not dictate what is appropriate in the instant rulemaking.

The proposed 2013 goal of collecting 65,000 mercury thermostats in California represents 17.56 thermostats per 10,000 people in this state. In Vermont and Maine during 2011, the latest year where data are available, the comparable collection rates are 57.20 and 49.97 thermostats per 10,000 people, or about three times better than what is proposed for California. Moreover, DTSC's proposal to rely upon the lowest possible value for the number of mercury thermostats coming out of service in California provided in the TRC 2009 Waste Flow Report also reinforces the modesty of the early collection goals. On these bases, we believe the proposed 2013 and 2014 collection goals represent the minimum goals DTSC could have chosen consistent with the statutory objective of collecting "the maximum feasible number" of mercury thermostats coming out of service, and if any changes are contemplated in the final rules, they should be to increase these collection rates.

Second, the final collection rate of 75 percent beginning in 2017 and thereafter is somewhat disappointing. This has been reduced from the previous draft of this regulation in 2011 requiring an 80 percent collection rate by 2015 and thereafter. Further, other CalEPA policies call for more ambitious collection rates of consumer products that are damaging to the environment. For instance, the California Air Resources Board adopted a regulation in 2010 for refrigeration units in passenger vehicles with a 95 percent return target by 2012 for the containers of

refrigerants with high global warming potential.¹³ We would strongly prefer to see a higher final collection rate of thermostats containing mercury, yet this program should begin without further delay.

Homeowner Identification Requirements

Under proposed Section 66274.7(b)(2), it would appear homeowners will be requested to provide their names, address, and telephone number to the collection location when returning a mercury thermostat for collection. We are not convinced of the need for this information, and in any case, this requirement may act as a disincentive for a non-professional to return the thermostat. During 2011, over 10% of the mercury thermostats collected in Maine came from Household Hazardous Waste (HHW) collection locations or the mail-back program, indicating homeowner participation can help make a program more successful and should thus be encouraged.¹⁴ We suggest DTSC rethink the need for this provision, recognizing that program changes to implement a financial incentive where homeowners may wish to provide such information can be made at a later time.

Manufacturer Reporting Obligations

In our comments on the June 2011 workshop draft rules, we urged DTSC to require thermostat manufacturers (i.e., TRC) to provide data regarding the performance of their collection program in other states, as well as California. Accordingly, we enthusiastically support the inclusion of subsection 67274.8(i) in the proposed rules, although we seek technical modifications to the regulatory language as provided below to accomplish the intended purpose.

As DTSC is aware, TRC no longer provides historic state-by-state collection data on its website, and for 2009-2011 has not released the state-by-state program collection data.¹⁵ Therefore, since these data will be useful in the future to DTSC and other stakeholders in California, DTSC should require the reporting of these data through the instant rulemaking.

As correctly noted in DTSC's Initial Statement of Reasons (pp. 17-18), DTSC will need the state-by-state collection data to achieve maximum achievable collection rates. The data will be useful to identify the best performing state programs, identify favorable or unfavorable trends in state collection programs, ascertain which programs have achieved substantial improvements and why, and evaluate the effectiveness of financial incentive models and other initiatives to improve collection results.

Indeed, DTSC staff presentations at the June 2011 workshop demonstrated both the importance of having the data for comparison purposes, and staff's inability to easily access the data

¹³ California Air Resources Board, Rulemaking to Consider the Adoption of a Proposed Regulation for Small Containers of Automotive Refrigerant, February 2010, <http://www.arb.ca.gov/regact/2009/hfc09/resubfro.pdf>.

¹⁴ TRC 2011 Annual Report for Maine, January 30, 2012, Table 3.

¹⁵ As discussed above, instead of releasing actual thermostat collection data, TRC has created a Mercury Recovery Index (MRI), which simply measures annual percentage increases or decreases per state versus calendar year 2007, without providing the underlying collection data. Accordingly, TRC's MRI is just another technique for massaging the data in a way TRC believes most favorable to it, rather than providing actual collection results.

needed. DTSC staff prepared state comparison slides to illustrate a variety of points about the California program, but were unable to obtain 2010 collection data for several states.

However, the actual language of proposed subsection 67274.8(i) needs modification to accomplish its intended purpose. Specifically, the reporting obligation in the subsection only applies to “state-mandated” programs, and thus would likely produce only data on those ten states with thermostat collection legislation. This limitation is both unnecessary and unwise. It’s unnecessary because TRC routinely collects collection data on all states where it operates (as the MRI reveals), thus there is no significant burden associated with requiring the information on all states. Indeed, the actual collection data must be gathered before TRC’s MRI can be calculated. As a practical matter, the only new obligation DTSC would be imposing on TRC is the release of the information (something TRC had voluntarily done until 2009).

It’s unwise because DTSC will undoubtedly want the information on programs beyond the 10 ten states with legislation. For example, in this rulemaking, DTSC takes note of the per capita collection data for Maryland in 2010 in its analysis of the better thermostat collection programs.¹⁶ And as discussed above, TRC touts the Texas results for 2011 in its annual report, but actual collection data reveal a different story. Both DTSC and the California stakeholders will need to see the actual data to fully understand TRC program realities nationwide and evaluate possible paths forward.

A second change needed in proposed Section 67274.8(i) would require manufacturers to report on their program’s collection results for each state during calendar years 2009, 2010, and 2011, as part of the upcoming report covering calendar year 2012. As mentioned, these are the years for which TRC program collection results are currently missing, therefore once they are provided, the full TRC program will once again be transparent for all to understand and evaluate.

Finally, we suggest information on state laws is best obtained from the statutes themselves and state officials administering those laws, and that information on education and outreach activities be provided irrespective of whether they are required by statute.

To assist DTSC, immediately below are our recommended changes to proposed subsection 66274.8(i):

(i) A program that also implements ~~an state-mandated~~ out-of-service mercury- added thermostat collection program in one or more other states shall provide the following information about each such program:

(1) The name of the state;

(2) The number of out-of-service mercury-added thermostats collected in the state during the same calendar year covered by the report;

~~(3) A brief description of the state’s law, including any requirement for payment of an incentive to service technicians, contractors or homeowners to encourage collection;~~

¹⁶ Initial Statement of Reasons, p. 11, fn. 8.

(3) For the report covering calendar year 2012, the number of thermostats collected during calendar years 2009, 2010, and 2011 in the state;

(4) The number of collection locations for out-of-service mercury-added thermostats in the state, if known; and

(5) A description of any education and outreach activities and performance requirements included in the state law program.

Enforcement Language and Transparency

Even though the regulations do not include enforcement language as stated in the enabling legislation, we acknowledge that DTSC has enforcement authority over persons and entities that are being regulated under this program. We are confident that DTSC will exercise its ability to fully enforce if collection targets are not met. Additionally, in the case that TRC fails to meet collection goals and/or amendments are needed in the provisions, we expect DTSC will involve stakeholders, such as the undersigned organizations, in any discussions relating to program changes.

We Urge DTSC to Move Forward to Finalize this Important Regulation as Swiftly as Feasible.

We are grateful for the hard work of many DTSC staff on these regulations, including the agency's efforts to engage in an extensive and thorough stakeholder input process and provide clear and adequate justification for the proposed rules. We urge a swift conclusion to the rulemaking so that greater numbers of mercury thermostats are collected and properly managed. Thank you for your consideration.

Debbie Raphael, Director
Department of Toxic Substances Control
1001 I Street
Sacramento, CA 95814

Regarding: Support for DTSC Proposed Regulations for Mercury Thermostat Collection and Performance Requirements

Dear Director Raphael,

We, the undersigned, are writing to you on behalf of our organizations and our thousands of California members in strong support of the Department of Toxic Substances Control (DTSC) proposed regulations on mercury thermostat collection. These regulations represent a critical step to address a significant source of mercury pollution, and are already overdue.

The Mercury Thermostat Collection Act of 2008, Assembly Bill 2347, requires manufacturers to establish a collection and recycling program for out-of-service mercury-added thermostats. The intent of the statute is to make throwing away thermostats containing mercury against the law by 2012. To meet this intent, the statute authorizes DTSC to require revisions to manufacturers' collection programs and to undertake other actions such as providing incentives and education to contractors, service technicians, and homeowners to encourage the return of out-of-service mercury added thermostats.¹

¹ Id. § 25214.8.13(g).

Mercury harms the development of the human fetus and young children. The federal Centers for Disease Control and Prevention estimate that between 300,000 and 630,000 infants are born in the United States each year with mercury levels that are associated, at later ages, with the loss of IQ. Evidence indicates that methyl mercury exposure may also increase the risk of cardiovascular disease in humans, especially adult men.

According to the Thermostat Recycling Corporation (TRC)'s calculations, 222,000 – 460,000 out-of-service mercury-added thermostats will become waste in 2012 in California. Taking the mid-point of this range, and assuming an average of 4 grams of mercury per thermostat, these thermostats will contain roughly 1.5 tons of mercury. This preventable threat to human health and the environment warrants a strong DTSC response.

The Regulation is Critical Because Voluntary Efforts Thus Far Have Failed.

DTSC's proposed regulations are essential because of the inadequate mercury thermostat collection program in California and nationally currently operated by the manufacturers through TRC. In California, TRC collected almost 20,000 thermostats in 2011, representing less than ten percent of the mercury thermostats becoming waste in this state last year. Thus, even three years after the passage of California's mercury thermostat collection legislation, the TRC program fails to collect the vast majority of available mercury thermostats in this state, resulting in substantial and avoidable mercury releases.

We Strongly Support the Following Important Provisions and Recommend Several Minor Improvements to Enhance the Regulation.

We support the proposed definition of "incentive" in DTSC's proposal to clarify that the intent of California law is to provide a financial incentive for contractors, service technicians, and homeowners to encourage the return of out-of-service mercury thermostats. This clarification is needed due to TRC's steadfast opposition to introducing financial incentives despite the poor performance of their voluntary programs. As evidence of the power of incentives, the two state programs that mandate financial incentives (Maine, Vermont) consistently rank among the top three collection programs nationally on a per capita basis.²

We also support DTSC's decision to calculate the number of the mercury thermostats becoming waste in California based on the TRC sponsored research and results mandated by the Legislature precisely for this purpose.³ We believe this TRC data is of high quality and soundly defensible and thus urge DTSC to proceed with caution on any effort to revise or update those calculations.

² See e.g., Turning Up the Heat, Exposing the Manufacturers' Lackluster Mercury Thermostat Collection Program, Clean water Action, February 2010; Initial Statement of Reasons, p. 11, fn. 8.

³ Mercury Containing Thermostats: Estimating Inventory and Flow from Existing Residential & Commercial Buildings, prepared for TRC by Skumatz Economic Research Associates (SERA), dated December 28, 2009 (hereafter "TRC 2009 Waste Flow Report").

While we are very pleased that this regulation will increase the collection of used mercury thermostats beginning next year, we are disappointed that the final collection rate has been lowered from 80 percent in a previous draft proposal to 75 percent in this final proposal. This is notably lower than the 95 percent collection target of a climate policy adopted by the California Air Resources Board in 2010 for automotive refrigerant canisters.⁴ However, while we would strongly prefer to see a higher collection rate of thermostats containing mercury, the greatest priority is for this program to begin without further delay.

We strongly support the requirement that thermostat manufacturers (i.e., TRC) provide performance reports including detailed data from collection programs in other states, as well as California, since TRC no longer publicly reports this information. This would allow DTSC to benchmark performance in California against other states. We urge DTSC to revise the proposed regulation to ensure the data is provided for all other states, not just states with thermostat collection laws. Furthermore, we recommend that information on education and outreach activities be provided irrespective of whether they are required by statute.

Lastly, in the case that TRC fails to meet collection goals and/or amendments are needed in the provisions, we anticipate that DTSC will involve stakeholders, such as the undersigned organizations, in any enforcement discussions relating to program changes to ensure transparency.

We Urge DTSC to Move Forward to Finalize this Important Regulation as Swiftly as Feasible.

We are grateful for the hard work of many DTSC staff on this regulation, including the agency's efforts to engage in an extensive and thorough stakeholder input process. We urge a swift conclusion to the rulemaking so that greater numbers of mercury thermostats are collected and properly disposed of. Thank you for your consideration.

**Re: Comments on 45-Day Language for Mercury Thermostat Collection Act of 2008
(DTSC # R-2010-03, OAL Reference Number Z-2012-080705)**

Dear Ms. Von Burg:

Heating, Air-Conditioning & Refrigeration Distributors International (HARDI) appreciates the opportunity to review and provide comments on the 45-Day Language for regulations governing the treatment of collected mercury thermostats. HARDI¹ continues to be an active stakeholder in state mercury collection programs, starting after the adoption of the legislation which provides the statutory basis for this regulation. While there are improvements from previous iterations of this regulation, the proposed reporting requirements make this regulation unworkable in terms of its stated purposes considering the resource limitations of the industry.

Since October of 2010, HARDI has been an active partner with the Thermostat Recycling Corporation (TRC), a non-profit corporation voluntarily founded by thermostat manufacturers for the purpose of collecting and properly disposing mercury thermostats. As such, HARDI supports comments submitted by the TRC. HARDI also supports comments made by sister trade associations in the heating, ventilation and air conditioning (HVAC) community which highlight additional relevant points of concern.

HARDI is committed to engaging all of our wholesaler and distributor members regarding their collection obligations in California and will continue to encourage their participation in the TRC program. HARDI and our members support the broad goals of the TRC and look forward to continuing work with DTSC and other stakeholders in the state to help spur increased collection of mercury thermostats. HARDI members

1. HARDI is an international trade association of nearly 1,000 member companies, over 450 of which are US-based wholesale distributors of HVACR equipment, supplies, and controls. HARDI represents over \$25 billion in annual sales and an estimated 90% of the U.S. wholesale HVACR market. Over 80% of our distributor members are small businesses with fewer than 100 employees. TRC and HARDI have agreed to work collaboratively to promote mercury thermostat recycling with on-going awareness communication and co-branded promotional materials.

routinely apply TRC mercury thermostat recycling principles in their operations and have been honored with awards for their efforts.

To be workable, the regulation must be simple and flexible to allow for contractors and collection sites to operate without a multiplicity of reporting requirements. We have general concerns that the approach envisioned by the regulation will not achieve the underlying collection targets and will be overly burdensome to the regulated community. As such, the regulation could have the effect of impeding collection and inhibit the HVAC community's efforts to maximize the number of total collected mercury thermostats.

Section 67388.7 Reporting Requirements

HARDI requests the elimination of language requiring addresses, names, contractor license numbers, phone numbers and other identifying information. HARDI believes contractor, wholesaler and distributor preference for efficacy and ease of use is critical to program participation. We object to the request for information that would establish a list of our wholesaler and distributor members and their activity in California. In many cases, wholesalers and distributors have defined territories within the state working with multiple contractor businesses. The disclosure of these relationships would jeopardize confidential business strategies and encourage noncompliance.

If the collection rates are currently deemed to be unsuccessful, the resulting lack of success – all the reasons for it – should be analyzed and future reporting requirements based on that analysis. Lack of participation may be a cause for poor performance, but it may be one of many causes, and should not be assumed to be the only cause to potentially require additional reporting. We would support a voluntary assessment process on the current collection impacts in order to inform the appropriate regulatory response.

HARDI and a majority of our member companies have dedicated immeasurable time and energy to the informal and formal regulatory processes and remain very interested in the development of the proposed regulation. We are committed to a market-based program that will promote realistic collection rates. Wholesalers and distributors that are participating in the program have assumed the financial responsibility for liability insurance; required waste handling; administration of the program; and staff time for training, collection, handling, transport, emergency plans, release reporting, manifests, audits, and so forth. If the goal of the regulation is to increase collection rates, onerous reporting requirements will result in fewer agreeing to devote resources to participate in the future.

Respectfully submitted,

Jonathan Melchi

Re: Mercury Thermostat Collection and Performance Requirements

Dear Ms. Von Burg,

On behalf of Honeywell International Inc. ("Honeywell"), we respectfully submit the following comments on the proposed Mercury Thermostat Collection and Performance Requirements ("Regulations"). Based on our review of the Regulations and the information available in the rulemaking file,¹ there are several aspects of the Regulations that require further analysis and/or modification.

¹ It is difficult for us to meaningfully evaluate and comment upon the proposed Regulations because the rulemaking file contains very little supporting information. *See* Exhibit 1 (Sept. 5, 2012 Email from DTSC to Christopher Roberts; attachments to the DTSC email consist of (1) the Public Notice, (2) the Proposed Text, (3) the Initial Statement of Reasons, (4) a copy of the MTCA, (5) a CEQA Notice of Exemption, (6) a Form 399 Economic Impact Statement and (7) an Economic and Fiscal Impact Analysis). Moreover, in response to our attempt to obtain additional information through a Public Records Act request, we were informed that documents could not be produced until to October 5 (three days after the comment period closes). *See* Sept. 14, 2012 Letter from Robert Sullivan

I. The Methodology For Calculating The Number Of Out-Of-Service Mercury-Added Thermostats Becoming Waste Annually Is Flawed.

Section 66274.4 of the proposed Regulations establishes a methodology for determining the number of out-of-service mercury-added thermostats that become waste annually. DTSC has chosen to rely entirely on the SERA Report for establishing this critical waste thermostat baseline. But the SERA Report is deeply flawed. Indeed, the study itself identified numerous problems that resulted in “count” and “flow” estimates that do not provide a useful basis for extrapolation.

For example, to determine the number of mercury-added thermostats in California, the study relied on respondents to count and identify the type of thermostats in their homes and businesses. Digital thermostats do not contain mercury. Other types of thermostats (e.g., square, round, snap, lever, etc.) may or may not contain mercury. Removing the cover of a non-digital thermostat is the *only* way to definitively determine if the device contains mercury, but DTSC did not permit SERA to ask respondents to do so. Rather, respondents were simply told to identify the type of thermostat(s) (e.g., programmable, square, round, snap, lever, etc.) in their home or business. SERA Report at 12. The onsite survey discussed below later determined that several respondents failed to accurately count the number of thermostats in their home/business or accurately identify the type.

SERA then conducted a “very small (30 observations)” on-site validation survey to determine the percentage of these non-digital thermostat types that contain mercury (*id.* at Note to Table 1.1) and then used that data to extrapolate a “lower estimate” of the share of thermostats in California that are mercury-containing. *Id.* at Table 1.1. But 30 site-visits (which equates to 3.5% of respondents) is too small of a sample to yield meaningful results.² Indeed,

Footnote continued from previous page

to Sara Eisenberg (attached hereto as Exhibit 2). And, notably, although the Initial Statement of Reasons provides web addresses for some of the “Reports Relied On” by the Department of Toxic Substances Control (“DTSC”) the documents are not, in fact, available at those websites. *See* Exhibits 3-5.

² The inability of such a small sample to yield meaningful and valid results is evident from the fact that the SERA Report concluded, based on the small survey, that 100% of snap thermostats contain mercury. *See* SERA Report at Table 1.4 (lower estimate of 100% for snap thermostats based on validation survey). This is demonstrably false. *See* Ex. 6 (*mercury free* snap thermostat that is virtually

Footnote continued on next page

because the field validation survey was so small, the SERA Report itself acknowledges that the estimate is imperfect and that the actual share of mercury models may be lower than the “lower estimate.” *Id.* at Note to Table 1.1.

Moreover, there is no indication of how the 30 respondents who received site visits were selected or whether those respondents were typical of respondents in general. Indeed, there is reason to believe they were not. Despite the fact that this was a *statewide* survey, all of the site visits occurred in a few, relatively homogeneous counties in the Bay Area. It is not possible to validate the findings of a statewide analysis through such a limited follow-up in a small geographic area of the state. And if the respondents who received visits were not typical—*i.e.*, if they were less likely to have purchased mercury free non-programmable thermostats (due to economic, geographic, demographic or other reasons)—the results may have been further skewed by the selection process.

Finally, a recent study determined that 19% of households in California have no thermostat at all. *See* Therese Pepper, *et al.*, *How People Use Thermostats in Homes: A Review*, 46 *Building and Environment* 2529, 2533 (2011) (hereafter “*How People Use Thermostats*”) (attached hereto as Exhibit 7). This fact was not taken into account in the SERA Report, which assumes that there are 1.2 thermostats in *every* California household. As a result, the total number of thermostats in California (and the number of mercury-added thermostats derived therefrom) is likely to be significantly lower than estimated in the SERA Report.

SERA’s methodology to predict the annual “flow” of thermostats out of buildings is also flawed. To make this prediction, the study relied on respondents’ memories of when the thermostats were last replaced. As the Report acknowledges, this data, which is based on the recall of current occupants is “necessarily imperfect” (SERA Report at 18 n.26)—especially since “younger households may not know when the home was remodeled for a thermostat replacement.” *Id.* at 17.

As a result of these flaws, the waste thermostat baseline determined by the SERA Report and utilized in the proposed Regulations is not sound.

Footnote continued from previous page
identical in appearance to the picture of the snap thermostat provided in SERA’s questionnaire).

II. The Annual Collection Rate Performance Requirements Are Unreasonable.

Section 66274.5 of the proposed Regulations sets out annual collection rate performance requirements of 30% (65,100 thermostats) in 2013, 45% (95,400 thermostats) in 2014, 55% (113,850 thermostats) in 2015, 65% (131,300 thermostats) in 2016, 75% (147,750 thermostats) in 2017, and 75% in 2018 and subsequent years. Given the unsound and inflated waste thermostat baseline established in Section 66274.4, these rates translate into an unreasonably high number of thermostats which must be collected each year.

In the last several years the Thermostat Recycling Corporation (“TRC”)—which was voluntarily founded by Honeywell, White-Rodgers and General Electric in 1998—has implemented a multi-faceted effort to increase mercury-added thermostat collection and recycling.³ TRC has recruited wholesalers at tradeshow and industry meetings, reached out directly to distributors, earned media coverage through trade press and purchased advertising. TRC has employed—and continues to employ—numerous strategies to elicit wholesaler participation in the thermostat recycling program in California, including:

- Direct mail to managers of facilities in California and corporate headquarters;
- Earned media on the legal obligation to collect waste thermostats in California and other states;

³ Even before co-founding the TRC in 1998, Honeywell had engaged in substantial efforts to recycle mercury-added thermostats. As early as 1985, Honeywell began its own pilot programs in Minnesota to recycle end-of-life mercury-containing thermostats through distributors, contractors, and homeowners. These programs were developed in conjunction with, and under the guidance and authority of, the Minnesota Pollution Control Agency (“MPCA”), where Honeywell was based at the time. Honeywell proposed thermostat take-back programs to the EPA in May and October 1992, and to the MPCA in January and August of 1992 and February 1993. On October 17, 1994, Honeywell and MPCA jointly announced the availability of a homeowner mail-in program for end-of-life mercury thermostats from Minnesota residents, and in late 1994-early 1995, Honeywell requested authorization from the MPCA to operate a national program. Shortly thereafter, Honeywell, White-Rodgers and General Electric began discussions with the National Electrical Manufacturers Association about managing a national program on the industry’s behalf, and by 1998 TRC was formed as an independent not-for-profit corporation.

- Direct appeals to local and senior management of wholesale distributors with facilities in California;
- Engagement with regional and national trade associations to assist them in advising members on legal obligations in California and other states;
- Attending regional and national HVAC trade shows to provide information to raise awareness of the recycling obligation and TRC's program.

In October 2010, TRC entered into a formal agreement with the Heating Airconditioning Refrigeration Distributors International ("HARDI") trade association to promote the thermostat recycling program to HARDI members, which comprise approximately 80% of the domestic wholesale market for HVAC equipment. Pursuant to this agreement, TRC notified all 450 HARDI members of their collection obligations and encouraged them to participate in the TRC program. Similarly, TRC joined the Institute of Heating and Air Conditioning Industries, which is the largest HVAC trade association in California, and used its membership status as a means to contact contractors and distributors actively engaged in HVAC work in California. TRC has corresponded with at least five additional trade organizations, informing them of wholesalers' collection obligations and encouraging them to participate in the thermostat recycling program. *See generally* 2010 California TRC Annual Report (attached hereto as Exhibit 8).

In 2011, TRC continued its efforts by, *inter alia*, developing written materials and signage for collection points and key stakeholders, increasing the level of participation among California wholesalers and retailers, purchasing substantial advertising and developing new public service announcements. *See generally* 2011 California TRC Annual Report (attached hereto as Exhibit 9). As a result of these varied efforts, the collection and recycling of mercury thermostats has increased significantly in California: from 7,542 in 2009 to 18,697 in 2011.

The proposed annual collection rates require manufacturers to increase their collections **248%** by 2013 and to sustain infeasible growth rates over the next several years (47% growth in 2014, 19% growth in 2015, 15% growth in 2016 and 13% growth in 2017).

Table 1: Growth Rate Requirements Under Section 66274.5

<u>Year</u>	<u>Performance Requirements (TP)</u>	<u>TP expressed as number of thermostats</u>	<u>Required Growth Rate</u>
2011	n/a	(actual rate) 18,697	n/a
2013	30%	65,100	248%
2014	45%	95,400	47%
2015	55%	113,850	19%
2016	65%	131,300	15%
2017	75%	147,750	13%

Although an early growth rate of 13 or 15 percent may not be unreasonable (and has, in fact, been surpassed in recent years in California), such rates are not sustainable as the number of thermostats in the state and the number of thermostats coming out of homes and businesses declines. Indeed, such rates have *not* been maintained year-over-year in other states with collection obligations. Even Maine, which is lauded as the national model, has not achieved or sustained anything near the unreasonable growth rate demanded by the proposed Regulations. Collections in Maine grew by 19% in the *first* full year of that state’s program (2008), and growth declined to 15% in 2009, 2% in 2010 and 1% in 2011.⁴ *See* Table 2; *see also* Department of Toxic Substances Control, Initial Statement of Reasons: Mercury Thermostat Collection and Performance Requirement (hereafter “ISOR”) at 11 n.8.

Table 2: Maine Collection Trends 2008-2011

<u>MAINE</u>	<u>2008</u>	<u>Growth</u>	<u>2009</u>	<u>Growth</u>	<u>2010</u>	<u>Growth</u>	<u>2011</u>	<u>Growth</u>
Thermostats	5,555	19%	6,374	15%	6,523	2%	6,616	1%

The sole articulated basis for the overly aggressive collection rates proposed in the Regulations is that they are “based on historical collections by the [TRC] in a number of other states.” ISOR at 11. DTSC contends that “[i]n 2010, TRC programs in several small states were able to collect >500 mercury thermostats per 100,000 population,” and that the proposed collection rates are justifiable because they are “more modest.” Notably, however, the ISOR refers to only three states—Maryland, Maine and Vermont—but DTSC’s own materials

⁴ This despite the fact that Maine requires manufacturers to offer a financial incentive.

demonstrate that the per capita recovery rates in these states are outliers, with recovery rates that dwarf other states including Illinois, Iowa, Montana and Rhode Island. *See* Andre Algazi, California Department of Toxic Substances Control, *California's Mercury Thermostat Collection Act: an EPR Approach* at 12 (attached hereto as Exhibit 10) (indicating, *inter alia*, that Vermont recovers approximately .00004 pounds of mercury per capita, while Iowa and Rhode Island recover less than a quarter of that amount (less than .00001 pound per capita), and Illinois and Montana recover even less—under .000005 pounds per capita).

There are several reasons why recycling programs in California cannot be expected to achieve such unusually high per capita recovery rates.

As an initial matter, the ease with which manufacturers can achieve a higher per capita recovery rate is directly related to the per capita number of mercury-added thermostats in a state. Put simply, it is, of course, more feasible to collect 500 mercury-added thermostats when there are 80,000 such thermostats for every 100,000 people than when there are only 50,000 such thermostats for every 100,000 people. And there are unique circumstances in California that drive the per capita number of thermostats down in comparison with other states:

- Title 24 of the California Code of Regulations (also known as the California Building Standards Code) began to require “setback thermostats” in 1978, thereby significantly limiting the number of mercury-added thermostats in commerce in California. And since the mid-1990s, Title 24 has effectively banned the installation of mercury-added thermostats in any new or retrofit construction in California. This has resulted in a higher percentage of programmable (non-mercury) thermostats in California than elsewhere in the country. *See How People Use Thermostats* at 2533 (noting that “the increased number of programmable thermostats in California versus nationwide is likely attributed to the last 30 years of energy code requiring a setback or programmable thermostat”).
- As noted above, a recent study determined that 19% of households in California—a higher percentage than the national average—do not have any thermostats at all. *See Id.* (“The percentage of houses in California without thermostats differs from the national percentage due to milder weather”). In other words, the number of thermostats per capita is lower in California than it is in other states—particularly states with colder weather, like Vermont and Maine.

Moreover, no other California recycling program includes such aggressive target performance collection percentages—and a European recycling program that set similarly aggressive rates for recycling of portable batteries has proven unworkable. In 2006, the European Union (“EU”) directed its members to implement mandatory recycling obligations on manufacturers of portable batteries. Target collection rates were set at 25% by 2012 and 45% by 2016, taken against a baseline of the previous three-year sales of portable batteries. Significantly, several EU members project that they will *not* be able to increase battery collections to meet the 25% collection goal by 2012, and the 45% goal for 2016 is even more unrealistic. *See, e.g., EU set to miss targets for battery collection, recycling* (Oct. 14, 2011), available at <http://www.euractiv.com/specialreport-recycling-society/eu-set-targets-battery-collectio-news-508303>. This despite the fact that portable batteries enjoy a key collection advantage over mercury-added thermostats: end-of-life batteries retain economic value from their constituent rare metals, while the mercury in thermostats has a negative value. Moreover, while the number of mercury-added thermostats in California is constantly declining, there is a continuous flow of portable batteries into the stream of commerce. Given that the EU deems it unlikely to achieve its collection goals for a more valuable end-of-life product, DTSC’s aggressive proposed collection rates for mercury-added thermostats are unrealistic and unreasonable.

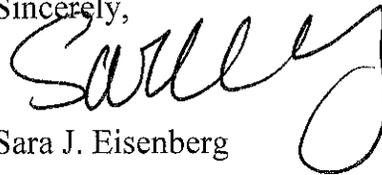

Indeed, a survey of recycling programs in the United States and Europe and found no programs (outside of lead-acid batteries⁵) that achieve similar levels of performance. And even DTSC has acknowledged that the collection rates are not feasible and that manufacturers will likely be forced into an enforcement context within a year after the regulations take effect. *See Exhibit 11.*⁶

⁵ The high collection rate for lead-acid batteries derives in large part from certain advantages lead-acid batteries enjoy that items such as mercury-added thermostats do not. For example, lead-acid batteries are replaced by or for consumers who are incentivized to exchange them at the time of replacement. Distributors and recyclers are similarly incentivized to collect lead-acid batteries because the lead contained therein retains economic value at end-of-life, whereas the mercury in thermostats has a negative value. Also, the physical nature of lead-acid batteries—their sheer size and bulk—makes them significantly harder to illegally dispose than mercury-added thermostats. Because of these important differences, DTSC cannot look to the lead-acid battery collection context as evidence to support its unrealistic mercury-added thermostat collection rates.

⁶ Accordingly, before the proposed Regulations were made available for formal public review and comment, TRC (on behalf of Honeywell and other TRC

On behalf of Honeywell, we appreciate your consideration of these comments and encourage DTSC to consider revising the proposed Regulations to ensure that the requirements contained therein are reasonable and achievable. We also ask that you please include these comments, and any other written comments that you receive, in the rulemaking file pursuant to Government Code Section 11347.3(b)(6).

Sincerely,

Sara J. Eisenberg

58319137F

Footnote continued from previous page

members) provided DTSC officials with draft alternative regulations. *See* Exhibit 12. Honeywell continues to believe that the “Annual Collection Rate” provisions set forth therein will be at least as effective as the proposed Regulations at “provid[ing] for the collection and recycling of the maximum feasible number of out-of-service mercury-added thermostats” (Health & Safety Code §25214.8.20) and will be less burdensome on affected parties.

Hello,

I just wanted to follow up on my request to obtain copies of the rulemaking file listed below (Department Reference Number R-2010-03). Please let me know at your earliest convenience the best procedure for procuring that file.

Thanks,
Chris

Hello,

I would like to obtain a copy of the entire rulemaking file for the Mercury Thermostat Collection and Performance Requirement matter with Department Reference Number R-2010-03. What is the best procedure for acquiring a copy of the entire file? I can schedule to come to the Department just about any time to make copies.

Thanks so much,
Chris

Re: Thermostat Regulations PRA request dated 8/30/12; received by fax 9/5/12

Dear Ms. Eisenberg,

On September 5, 2012, the Department of Toxic Substances Control (DTSC) received by fax your letter dated August 30, 2012 requesting records under the Public Records Act (PRA). DTSC is in the process of gathering and reviewing the requested records.

The records need to be searched for and collected and may be located in different field offices of DTSC.

The request seeks records that are separate, distinct, and voluminous and need to be searched for, collected, and examined before they can be released.

The request seeks records that may require coordination and consultation with another agency, or two or more components of DTSC, that have a substantial interest in the records.

Once the records are collected, our legal department must review them before they can be disclosed and provided to you. I am hoping that by October 5, 2012 we will be able to notify you as to which records will be available for your review and which, if any, may be exempt from disclosure and why.

Preliminarily, it appears that some of the records you seek may likely be exempt from disclosure and will not be provided by DTSC for your review. Records which are likely exempt are

draft documents,
enforcement documents related to ongoing investigation and enforcement actions,
records of complaints or investigations,
attorney-client communications,
attorney work-product documents,

Documents containing such information are likely exempt under the following PRA exemptions:

Draft documents, Government Code section 6254(a);

Records protected by the Official Information Privilege through Government Code section 6254(k) and Evidence Code section 1040;

Records of complaints or investigations protected by Government Code section 6254(f);

Records protected by the Deliberative Process Privilege through Government Code section 6254(k) and *Times Mirror Company v. Superior Court* (1991) 53 Cal. 3d 1325, and/or the balancing of interests test of Government Code section 6255;

Records protected by the Mental Process Privilege through Government Code section 6254(k);

Records protected by the Attorney-Client Privilege through Government Code section 6254(k) and Evidence Code section 954;

Records protected by the Attorney Work Product Privilege through Government Code section 6254(k) and Code of Civil Procedure section 2018.030;

As DTSC locates the requested records, DTSC will make every effort to keep you informed about records that are not exempt from disclosure.

Heat Only Thermostat CT30A by Honeywell

Be the first to leave a review

\$14.99

Qty: 1

Model: CT30A Sku: 0-85267-26239-2

CT30A Heat Only Thermostat - Low voltage controls with a snap-action switch for heating systems only. Precise temperature control, snap action switching, mercury free.
Sku: YCT30A1003

- * Simple worry free operation
- * Bimetal temperature sensor
- * Snap Acting Switch (Magnetic Switch) does not require leveling
- * Mercury free
- * Decorative backplate included to cover wall marks from old thermostats
- * Simple, worry-free operation
- * Available in:
 - * Heat Only (CT30A)
 - * Heat/Cool (CT31A)
 - * Millivolt (CT33A)

Key Benefits

Comfort and easy operation

More Information

Heat only thermostat that is easy to use and mercury free

ABSTRACT

Residential thermostats control a substantial portion of both fuel and electrical energy—9% of the total energy consumption in the U.S. Consumers install programmable thermostats to save energy, yet numerous recent studies found that homes with programmable thermostats can use more energy than those controlled manually depending on how—or if—they are used. At the same time, thermostats are undergoing a dramatic increase in capability and features, including control of ventilation, responding to electricity price signals, and interacting with a home area network. These issues warrant a review of the current state of thermostats, evaluating their effectiveness in providing thermal comfort and energy savings, and identifying areas for further improvement or research.

This review covers the evolution in technologies of residential thermostats; we found few standards and many features. We discuss studies of how people currently use thermostats, finding that nearly half do not use the programming features. The review covers the complications associated with using a thermostat. Finally, we suggest research needed to design—and especially test with users—thermostats that can provide more comfortable and economical indoor environments.

1. Introduction

Heating and cooling homes consumes a substantial portion of energy. Most households in the U.S.¹ use thermostats to control the heating and/or cooling system in their home; in 2005, approximately 97% of households in the U.S. had a heating system and over 75% had air conditioning (Table 2.6 in [1]). In 2008, about a quarter (28% or 6.04 quadrillion BTUs) of the total residential source energy consumed was for heating and 14% (3.07 quadrillion BTUs) for cooling [2]. Most (65%) of the energy supplied by fuels (primarily natural gas, also fuel oil and propane) was for heating [3], but the use of electricity for heating nearly doubled from 1985 to 2005. While approximately 20% of total residential electrical energy was used for cooling, air conditioning constitutes the largest single contributor to peak electricity demand (which can lead to brown-outs and wildly variable wholesale prices) [4]. Moreover, electricity use for air conditioning is rapidly increasing, due to population growth in hot climates and greater demand for comfort. In 2009,

nearly 90% of newly constructed single family homes included air conditioning [5]. In 2008, energy for heating and cooling homes comprised approximately 42% of the total source residential energy and about 9% of the total source energy in the U.S. [2,6].

The basic function of the typical residential thermostat—to set a target temperature, see the current temperature, and control the equipment accordingly—has remained constant over the past sixty years. A second—and expanding—role is to save energy. Many new features and functions have emerged in the past twenty years to facilitate the energy-saving role. While the thermostats' capabilities to control temperature are well understood, less is known about the effectiveness of the technologies devised to enable savings. The uncertainty in these savings is increasingly important because manufacturers are adding many new features and functions that affect the ability and ease of saving energy. The most advanced thermostats control multiple zones and humidity levels. Still other features include one-touch energy-savings, access to weather, display of energy consumption, alerts for maintenance (e.g., battery, filter), and diagnostics [7]. Remote control is becoming a popular feature as smart phones and Internet access become ubiquitous. Some changes are dictated by regulations or utilities. Since 1978, California building codes have required thermostats with night setback capabilities and many other regions followed. The Environmental Protection Agency (EPA) established

* Corresponding author. Tel.: +1 510 289 4278.

E-mail address: therese.peffer@uc-ciee.org (T. Peffer).

¹ The thermostats described in this paper mostly control forced-air systems found in North American homes. However, many of the same issues apply to other heating and cooling systems found in Europe, Australia, and East Asia.

technical specifications for programmable thermostats for its EnergyStar program in 1995. A relatively recent development is residential demand response: utilities with high costs of supplying peak power want to communicate directly with thermostats because adjusting temperatures in cooperating customers' homes is cheaper than building new generation capacity.

This review describes the history and current state of the art of thermostats in Sections 2 and 3. Section 4 draws from the literature to understand what types of thermostats are installed and how they are used across the U.S. Section 5 discusses the energy savings from thermostats. Section 6 categorizes the types of problems in adopting programmable thermostats. Section 7 pairs what we know with what we don't know in suggesting areas for future research and policy implications. Section 8 of the review is the conclusion.

2. History

Since the first fire was lit in a cave, heating and cooling for thermal comfort in dwellings has required human intervention [8]. The Romans were among the first to move from the concept of a simple open fire to a central heating system, where hot air from a wood fire flowed through under-floor chambers or hypocaust [9]. In fact, the word thermostat is derived from the Greek words *thermos* ("hot") and *statos* ("a standing"). Cornelius van Drebbel (born 1572 in Alkmaar, Holland) is commonly credited with inventing the thermostat—automated temperature control in the form of a mechanical device; Van Drebbel was able to regulate the temperature of ovens and chicken incubators [8,10].

Modern thermostat history in the U.S. revolves around two companies who are still in the business of building thermal controls today: Johnson Controls and Honeywell. In 1883, Warren S. Johnson received a patent for the first electric room thermostat; upon his death in 1911, his company Johnson Controls focused on temperature controls for nonresidential buildings only [11]. In 1885, Albert Butz developed a furnace regulator that used a "damper flapper" to control air entry (and thus heat output) to a furnace. His company, the Electric Heat Regulator Co., eventually became Honeywell Inc [12]. In 1906, Honeywell produced the first automatic programmable setback thermostat, using a clock to turn the temperature down at night and up in the morning. The first thermostat with an anticipator—a means of reducing temperature overshoot—was produced in 1924. The first modern thermostat controlling a central heating system (typically a forced air system in the U.S.) used a bi-metallic strip to measure temperature change and used mercury in a tilting glass tube to provide contact with the electrodes in the tube to control the furnace. The typical thermostat interface was a simple rectangular box on the wall that used sliding levers to control the temperature; the ubiquitous Honeywell Round, which emerged in 1953 and is still available today, required the user to turn the round dial. These types of thermostats are often termed manual, standard, or mechanical thermostats. Both current temperature and the target or desired temperature were displayed on an analog scale showing temperature range.

Over the past 40 years, different policies have driven the development of features in thermostats. The first oil crisis in 1973 spawned the creation of the first energy code (Building Energy Efficiency Standards) in California in 1978, part of which required clock or setback thermostats for new homes. These thermostats were designed to save energy by automatically relaxing temperature setpoints when people are sleeping. Studies performed in the 1970s, based on models of energy flows through a house, suggested that on average a daily 8-h nighttime setback could bring approximately 1% reduction in natural gas consumption for each degree Fahrenheit offset [13]. This result became and

remains the rule of thumb that guides much of the discussion on the effectiveness of programmable thermostats with gas- and oil-fired heating systems.

The physical human interface on thermostats has evolved partly because of technical innovations and partly pushed by regulations. The Americans with Disabilities Act (ADA) standards introduced in 1988 mandated controls that did not require the twisting of one's wrist [14]. This requirement along with the trend away from mechanical thermostats with their moving parts towards semiconductor electronic manufacturing drove the "modern" look for thermostats. By the early 1990s, the new thermostat was a plastic rectangular box with few moving parts; thermistors replaced bi-metallic strips, digital display replaced analog, and push buttons replaced dials and slider bars. The addition of memory allowed the storage of data, such as target temperatures for different times of day, and required a power source.

In 1995, the Environmental Protection Agency's EnergyStar program included programmable thermostats, suggesting that homeowners could save about \$180 a year with a programmable thermostat [15]. EnergyStar requirements included certain features: default energy-saving and comfort setpoint temperatures, cycle rate setting, recovery systems, and a hold or override option. Consumers understood that the EnergyStar emblem on an appliance indicated energy efficient equipment; manufacturers had to comply with EnergyStar eligibility requirements.

Throughout the 1990s programming grew more complex, with these features plus programming schedules for weekend/weekday (5 + 2), seven-day, or vacation. More recently, part of the 2008 California Building Energy Efficiency Standards, commonly referred to as Title 24, requires that programmable thermostats have the ability to set temperature preferences for at least four different time periods per day.

Utilities across the globe are exploring time-varying price tariffs to reduce peak electricity demand—driven primarily from space heating (e.g., in hydroelectric-rich New Zealand and Canada) and cooling systems (e.g., in the U.S.). This created the demand for programmable communicating thermostats that can receive price or reliability signals from the utility. In California, while these thermostats were not included in the 2008 energy code, this is expected for future iterations; at the federal level, this will most likely start with the new EnergyStar specifications regarding climate controls (a subset of programmable thermostats) that include communication and time of use price level indication [16].

Remotely controlled thermostats have become both feasible and possible with the growing prevalence of cell phones, home area networks (HAN), and the Internet in residences. Several applications have been developed to enable control of a thermostat using a mobile phone. Global Positioning Systems (GPS) in mobile phones can be used to convey occupancy and proximity information to thermostats, which can then predict arrival times of a home's occupants and modify the setpoint accordingly [17].

Many aspects of a programmable thermostat's functionality have been transferred to the Internet. An Internet thermostat describes a programmable thermostat that connects to an IP (Internet Protocol) network; models are currently being made by Proliphix, Aprilaire, and EcoBee. Internet connectivity has spawned companies such as EcoFactor, which sells an energy-saving thermostat service. One network-enabled thermostat has a removable standardized communication module (based on U-SNAP (Utility Smart Network Access Port)) to connect the thermostat to a Home Area Network via various wireless standards, such as ZigBee, Z-Wave, RDS (Radio Data System), WiFi, FlexNet and Trilliant [18]. Further, companies such as Control4 who specialize in home automation have added a comfort function to their home management interface to remotely control an Internet thermostat

from the TV or other display. Likewise, security companies such as ADT have also included thermostats in their networks.

Thermostats have come a long way from simply controlling a heating or cooling unit and displaying current and target indoor temperatures (Fig. 1). Today's thermostats can control ventilation, whole house fans, humidity, and multiple zones. The user interface can be remote (e.g., controlled through web or smart phone), voice-controlled, a large full color LCD or touchscreen. Displays now can include outdoor temperature, messages from the utility, or maintenance alerts (e.g., battery or filter replacement warning).

These trends have shifted the thermostat from being a simple wired appendage of the heating and cooling systems to a separate product resembling software or consumer electronics. This is also reflected in the shift in the orientation of companies involved in thermostats, from more mechanical (e.g., manufacturers of HVAC equipment) to those more familiar with consumer electronics and communications.

3. Architecture & features

A basic thermostat has four components: a temperature sensor in the desired environment, a switch or actuator to the physical target of heating, ventilating, and air conditioning (HVAC) equipment, a feedback loop between the two, and some means of displaying the current (and target) temperatures as well as providing a means for the user to change the target temperature. Electronic devices with digital displays have largely replaced mechanical and mercury-based thermostats; wired connections are slowly being replaced by wireless. Advances in communication networks have allowed thermostats to become increasingly disaggregated into separate components. Fig. 2 shows a schematic of thermostat components, which may or may not be packaged together. The temperature sensor may be wireless, communicating with the controller via radio frequency; the user interface may be a mobile phone or web page.

1. *Sensors*: basic functioning of a thermostat requires at minimum a single room temperature sensor. Additional sensors could monitor humidity, outside temperature or additional inside temperature points, occupancy through infrared sensors, or connected to a security system that includes door entry or window sensors.
2. *Actuators*: the thermostat uses a switch or relay, whether mechanical or electronic, to turn on or off the target equipment, whether furnace, fans, or compressor for the air conditioning system. Other potential equipment includes an economizer, whole house fans, and a humidifier/dehumidifier.
3. *Control logic*: for simple thermostats, the control logic is simply a feedback loop that compares the target temperature with the

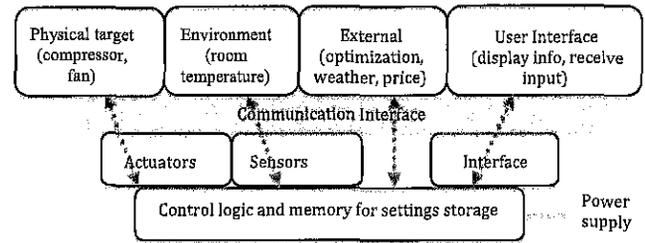

Fig. 2. Disaggregated components of a typical thermostat.

current measured temperature to determine when to turn on or off the equipment. Mechanical thermostats handled this, plus anticipation (to prevent overshooting the target) and hysteresis (a deadband of temperature typically ± 1 °F around the target temperature to prevent frequent switching of the equipment). Modern programmable thermostats provide anticipation, hysteresis, as well as other features through electronics. Data is read from the settings, user interface, and sensors, and a set of algorithms determines when the system switches on and off.

4. *User interface*: the user interface (UI) represents a means for the user to provide input for thermostat control and view a display of information. The UI allows users to change the target temperature setting—and on programmable thermostats, input a schedule of changing temperature settings—while displaying information, such as current and target temperatures. The thermostat interface can be mechanical with slide bars, digital with push buttons, or digital with touchscreen. New interfaces include web interfaces, mobile interfaces, TV interfaces, audio, and remote controls.
5. *Communication interface*: at a minimum, a thermostat must communicate with the HVAC system, generally through wired connections. Additional capabilities require communication using various protocols; examples include connection with a home area network, receiving price or reliability signals, streaming local weather forecast, receiving control signals through an external optimization service, or communication with interval meters.
6. *Memory*: programmable thermostats require memory for data storage; memory can be permanent or volatile (i.e., disappears when power is disconnected). These data, such as time of the day and target temperature for each program, are needed for the thermostat control logic.
7. *Power supply*: modern programmable and digital thermostats require electric power for operation. Batteries or low voltage ac power from the heating or cooling equipment typically provide this power; electric heating systems commonly use line voltage

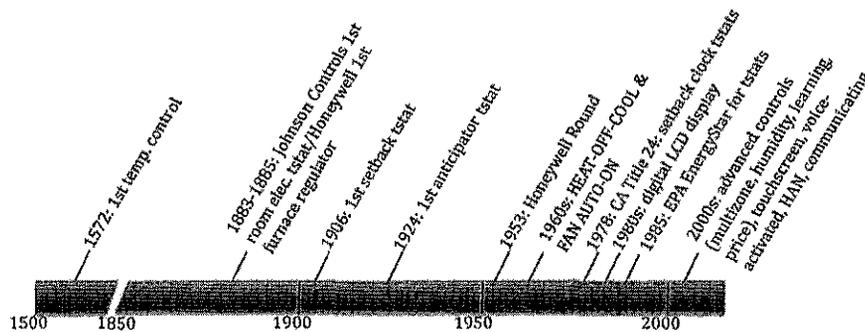

Fig. 1. Timeline of the history of residential thermostats.

power. Thermostats often employ both systems, using the batteries to preserve settings in the event of power outages or other failures.

3.1. Control features

Today's thermostats have a variety of features, both for control and the user interface, with different levels of sophistication. One range of features is related to *what* is under control. Thermostats typically control heating and cooling equipment, which can include forced air, radiant floor (typically using water) or radiant ceiling systems (water or electric), or radiators (typically steam). Some equipment, such as heat pumps, requires specialized control. Thermostats may also control related equipment, such as humidifiers/dehumidifiers, auxiliary heating systems, economizers, whole house fans, or other ventilation systems. High efficiency equipment often includes two stage systems with variable speed fans, which are controlled based on the difference in current and target temperature.

Another set of features of thermostats involves *where* the control lies. For example, a fan-delay relay at the equipment allows the blower fan to continue to run a few minutes after the compressor has turned off to take advantage of residual cooling. Some thermostats provide this control at the thermostat and allow adjustment of this time period. The anticipator, which turns off equipment before the setpoint is reached to prevent overshoot, may be adjustable (especially for heating) or not (cooling). Compressor protection, which requires the compressor to remain off for a few minutes minimum to protect equipment, is a typical feature often embedded at the HVAC controls.

A key issue is *how* these features work; some features with the same name (such as hold or recovery) have very different functions with different manufacturers. Some de facto standards have evolved, such as switches for heating/cooling mode (HEAT-COOL-OFF), auto switchover (automatically switch between use of heating and cooling equipment), and separate control of the blower fan (Fan-AUTO). For programmable thermostats, two push buttons to increase or decrease target temperature (as well as other functions) is fairly standard.

Some features have been driven by the EnergyStar program, such as default energy-saving and comfort setpoint temperatures and schedule, cycle rate setting, pre-comfort recovery, and hold and/or override options. Other policies, such as demand response dynamic pricing (described in [19]), are driving features such as communication and temperature setpoints that automatically respond to price. Other feature development is driven by increasing sophistication, such as multi-zone control, air filtering, and multi-stage HVAC equipment. While some thermostats do not indicate current time of day, programmable thermostats typically do—either

allowing an internal clock to be set by the user or providing a means of updating the time automatically.

3.2. User interface features

Another set of features relates to the user interface of the thermostat. These features are categorized by what is displayed and how it is displayed. Typical information to be displayed includes current and target temperatures (in Fahrenheit or Celsius), day of week, time (12 or 24 h), and current schedule control mode (e.g., morning, day, evening or night); some displays show outside temperature, relative humidity, and/or local weather forecast. System status is often displayed by the position of a switch, or text or icon. Status information includes:

- thermostat is off or in heating, cooling, or auto switchover mode,
- fan is off or in auto mode,
- heating or cooling system, fan, or backup heating system is currently running,
- hold/temporary/vacation mode is active (supercedes regular programmed schedule).

Another type of display is an alert, such as indication of a low battery or that the filter needs changing. Other types of information include help (e.g., tips, other information for easy set up, instruction manual), energy usage and or cost, messages from utility and/or current price tier.

The user interfaces of thermostats have evolved over time, both in how information is displayed and the means of user interaction. Early thermostats presented a needle-type marker that indicated current and target temperatures within a range of possible temperatures in an analog display (Fig. 3). The majority of programmable thermostats now use digital numbers to display temperature; some recent models have returned to numbers on an analog scale. Many programmable thermostats display text or numerical information on some sort of Liquid Crystal Display (LCD). The early models had relatively small monochrome screens that had space dedicated to specific information. In some models, a marker such as an arrow pointed to text (such as day of the week) printed on the plastic enclosure of the thermostat; the displayed marker changed position to indicate change in status or information. In recent years, the LCDs have grown larger, multi-colored, and screen space is shared—different information can be displayed in the same area at different times. Some thermostats use menus in a framework similar to personal computer interfaces to provide many layers of information structured on the same screen. Many programmable thermostats now have backlights for reading the LCD screen at night (Fig. 4).

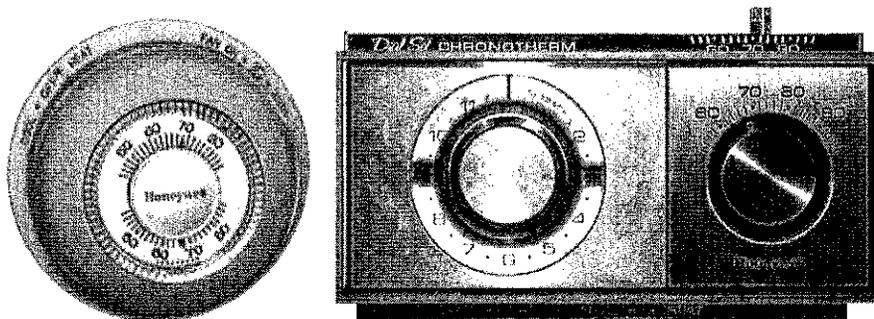

Fig. 3. Older thermostat designs with slider bars, dials, and analog displays; Honeywell Round [20] on left and Honeywell Chronotherm setback thermostat on right (photo by T. Peffer).

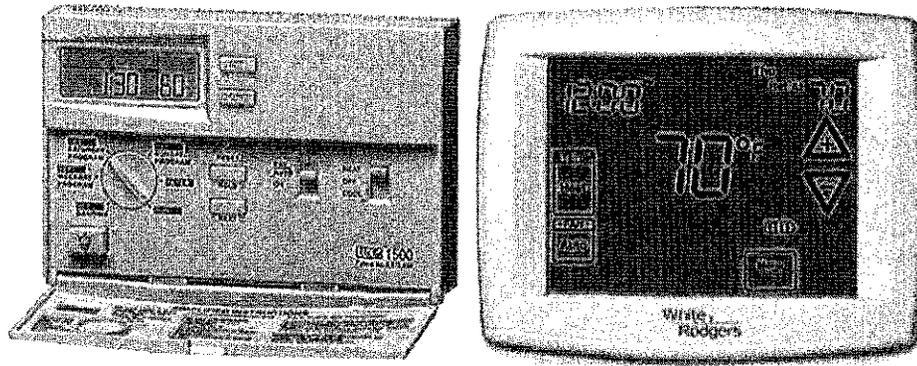

Fig. 4. The evolution of the programmable thermostat from small LCD on LUX 1500 [21] on left to full touchscreen on White Rodgers [22] on right.

The user interaction has changed from sliding needle-markers and turning dials to push buttons and even touchscreens on some models. While early models used push buttons to control a single use—up, down, hold, next, reset, clear—some thermostats rely on context-sensitive buttons, that is multi-use buttons that control different features in different modes. Physical slider switches are still commonly used, although in touchscreen and web interface models, these are replaced with a virtual switch. Other conventions borrowed from computer interfaces include using OK, Back, and Save buttons.²

Many thermostats have controls or settings meant to be used rarely and/or only at installation. These functions are often hidden from apparent view, such as locating the switch for temperature display in Fahrenheit or Celsius on the back of the thermostat. A separate installer mode might include setting cycle rate or temperature differential (deadband); these features may be only accessible via a specific sequence of button pushes.

Manufacturers are constantly offering new interfaces. Voice control thermostats allow a thermostat to be set up and controlled by spoken commands. Some thermostats offer the user a selection of multiple languages. Others provide great flexibility, such as custom names for various programmed schedules. Audible touch confirmation is a feature that imparts an audio prompt to confirm entries. Single button pushes allow easy program switches, such as changing to Daylight Savings Time versus Standard Time or changing to an occupied or energy-savings mode.

4. Thermostat ownership & usage

4.1. Thermostat ownership

We found data on thermostat ownership mainly from surveys. The Residential Energy Consumption Survey (RECS) is a national area-probability sample survey (about 4000 homes every four years) that includes several questions about presence, type, and usage of thermostats. The American Home Comfort Study (AHCS) also surveys 30,000 homeowners every two years; the 2008 survey was conducted via the Internet. About 86% of U.S. homes have a thermostat of some type controlling heating and/or cooling systems [24,25]. Over time, the penetration of programmable thermostats has increased in response to codes, decreased costs, needs for additional features (e.g., central air conditioning), and the desire to save energy. Building codes and other efficiency programs have accelerated the transition to programmable units.

Currently, about a third of U.S. homes have programmable thermostats [24,25]. The exact saturation is difficult to determine because the estimates rely on consumer responses to surveys. Consumers do not universally understand the distinction between the types of thermostats even though manual and programmable thermostats have very different capabilities. While two major categories of thermostats—manual or programmable—are generally recognized, several surveys have indicated that lay people do not understand these terms. Manual thermostats—those that require human intervention and have no automatic features—are often called standard or mechanical. However, manual thermostats can have digital displays and operate with electronic sensors and switches instead of mechanical ones. The early setback or clock thermostats look like manual thermostats with their analog displays, but they are categorized as programmable thermostats, since they can automatically change temperature based on a timed schedule. In both the national RECS and California-based Residential Appliance Saturation Survey (RASS), the authors noted problems with people understanding the term programmable thermostat [1,26]. In RECS, the authors noted that when a clarifying phrase was added to the question regarding type of thermostat, the number of households reporting a programmable thermostat nearly dropped in half compared to the previous survey, from 44.9 million in 1997 to 25.1 million in 2001 [27]. RASS noted that the numbers listed were lower than expected, that is, the response rate regarding programmable thermostats in post-1995 houses was expected to be 100% due to the energy code, but was underreported.

Although programmable thermostats have been available for more than 30 years, only 30% of U.S. households have installed them. In the 2005 RECS, 14% of U.S. households reported having no thermostat, 30% (34.6% of thermostat owners) had a programmable thermostat, and 56% had a manual thermostat [1]. According to the AHCS, 36% of households had programmable thermostats in 2004, and the percentage increased to 42% in 2008 [28]. In California, the 2005 RECS reported 19% of households with no thermostat, 44% (54% of thermostat owners) with a programmable thermostat, and 37% with a manual thermostat [24]. The percentage of houses in California without thermostats differs from the national percentages due to milder weather, whereas the increased number of programmable thermostats in California versus nationwide is likely attributed to the last 30 years of energy code requiring a setback or programmable thermostat. Of those that used central air conditioning in California, 68% had programmable thermostats; this most likely reflects the fact that homes built in the past 30 years were more likely to have central air conditioning (Fig. 5). Another survey conducted in Seattle, the Residential Customer Characteristics Survey 2009, reported that programmable thermostats were installed in approximately 51% of households [29].

² We note that Honeywell holds a patent on the saving changes indication, which poses a constraint on other thermostat designs [23].

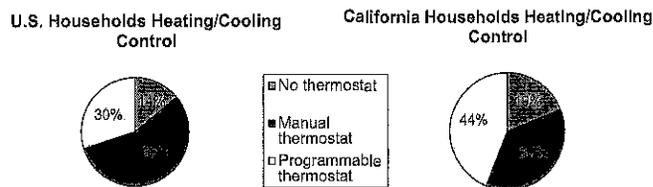

Fig. 5. Thermostat type in United States and California [1].

Thus, residential energy use (and savings) still depends largely on the settings of manual thermostats by the owners. This fraction will fall steadily in the next decade as older thermostats are upgraded through weatherization programs, utility incentives, and consumer initiatives to achieve energy savings and more features.

4.2. Thermostat usage patterns

Several studies show that programmable thermostats are set and programmed differently than manual thermostats. In a home with a programmable thermostat, the occupants can program a schedule to change the target temperature or setpoint. During the heating season, the temperature setpoint can be reduced (“set back”) when the house is empty or at night; in the cooling season, the temperature setpoint can be increased (“set up”) to prevent operation of the cooling system when not needed. In the 2005 heating season, about 60% of U.S. households with programmable thermostats reported using them to reduce temperature at night. Only 45% reduced the temperature during the day; the same survey indicated that approximately 51% of homes have someone home all day, which may explain why fewer household reduce temperature during the day than during the night [25]. During the cooling season, 55% of households with programmable thermostats set them to increase temperature at night as well as during the day [24]. According to the California 2003 Residential Appliance Saturation Survey (RASS), only 28% of households in California actively set up the temperature for air conditioning (AC) during the day, and the presence of programmable thermostats did not appear to dramatically affect setback behaviors [26]. Of the recent buyers of HVAC equipment, the American Home Comfort Study (AHCS) reported that 56% of homeowners always program their thermostats, 32% sometimes program, 9% never program their thermostats, and 3% do not know how [28].

In a study that compared the energy consumption of manual thermostats versus programmable thermostats in CA households, programmable thermostats were set slightly higher (i.e., 0.7–1.2 °F) than manual thermostats in the cooling season (which would save energy), but were not in OFF mode as often. In the heating season, programmable thermostats were set at higher temperatures than manual thermostats (which would cause more energy use), and far fewer were placed in OFF mode than manual thermostats [30]. A consumer survey conducted in Seattle revealed that a night setback was adopted by 86% of people with programmable thermostats and only by 60% of people with manual thermostats [29]. A study in California found that setpoints assumed in Title 24 energy code compliance software (similar to those required for EnergyStar eligibility) overestimated the cooling setpoint and underestimated the heating setpoints; in other words households in the study on average used a lower setpoint for cooling (used more energy) and a higher setpoint for heating (used less energy) than the default energy-saving setpoints [31].

Similarly, outside the U.S., setup and setback behaviors are not a common habit, as reported in several international studies. A cross-cultural study of energy behavior in Norway and Japan [32] reveals that less than 50% of Oslo’s households setback temperature at night

and 28% did not lower thermostat settings during weekends or vacations. Another northern European survey of 600 homes [33] showed that only 38% of the houses with thermostats lowered their temperature during the night.

Occupants regularly interrupt the programming of their programmable thermostat by selecting operating modes that suspend the programmed schedule: *hold* and *override* (sometime called temporary hold or temporary override) mode. *Override* allows the occupant to temporarily raise or lower the desired temperature typically until the next scheduled time program. The *hold* mode is a permanent change, and functionally transforms the programmable thermostat into a manual thermostat. A study conducted by thermostat manufacturer Carrier examined the operating mode of installed programmable thermostats in households within the jurisdiction of four utilities, LIPA, ConEd, SCE, SDG&E. Of the 35,471 thermostats monitored overall, only 47% were in program mode, in which the thermostat used the schedule previously input by the occupant to control temperature setpoints. The rest—53%—were in hold mode. The households within the two southern California utilities (SCE and SDG&E) showed a higher percentage (65%) in program mode, although it was unclear why [34]. In the AHCS, no distinction was made between override and hold. One question asked about the frequency of overrides for recent HVAC buyers (all the time 8%, often 12%, sometimes 36%, rarely 35%, never, 9%) [28]. It is difficult to know whether overriding “all the time” means the thermostat was in hold mode or not.

Several studies have examined temperature swings, comfort, and control within homes [31,35–39]. These indicated that thermal comfort preferences at home are very different from that in offices: there is a wider temperature range, because of greater control (i.e., occupants opened windows, and had greater freedom to change thermostat settings, clothing, and activity level) [40] and because of costs [41]. A recent national survey found that 49% of homeowners were very much satisfied with their home comfort systems, 43% somewhat satisfied, and 8% not at all satisfied [28]. There was a slight correlation between programmable thermostats and satisfaction: 45% of those very much satisfied had programmable thermostats compared to 32% of those who were not at all satisfied [28]. A preliminary study indicated that socioeconomic class may affect these responses: in a recent weatherization study by one of the authors (Meier) in low-income households, the top two complaints were mechanical ventilation and the programmable thermostat. However, thermal comfort throughout the home tends to be problematic—68% of homeowners found at least one room too hot in the summer and 60% found at least one room too cold in the winter [28]. When asked about seeking improvements to their home comfort system, 89% of homeowners listed greater energy efficiency as very important, but many listed issues with thermostat as very important as well: more even temperature (65%), better temperature control (68%), faster heating and cooling (64%) [28]. Other issues were listed as very important—such as better air purification (76%), improved air flow (69%), and better humidity control (64%) [28]. However, most commercially available thermostats (the main device to affect house thermal environment) control only air temperature, leaving all other parameters unmonitored and uncontrolled.

There are no set standards for thermal comfort in residences, although New York rental housing has a minimum indoor temperature requirement for the eight coldest months of the year [42]. A few have suggested the Adaptive Comfort Standard described in ASHRAE 55-2004 as an appropriate standard [40,43] since houses by law have operable windows for ventilation; this standard allows a wider comfort temperature range given the occupants’ ability to adapt. Thermal comfort has been defined and studied both in the lab and field, primarily in the commercial sector

[44–49]. Many factors have been found to influence thermal comfort, such as air temperature, radiant temperature, air speed, humidity, level of clothing/activity [44,50,51] as well as psychological, behavioral, and physiological influences [52–56]. These may explain the difference in heating and cooling season temperature offsets [57]. In general, comfort temperatures have been increasing in winter and decreasing in summer over the past several decades [58,59]. Several studies indicated control as a major issue in thermal comfort at home [35,38,40,60]. However, most of the thermal comfort testing and surveys in residences have suffered from small sample size and not been representative of all socio-economic and demographic classes; even surveys such as AHCS, RECS and RASS still struggle with definition of terms (e.g., programmable thermostat, setpoint, zones).

5. Energy savings from programmable thermostats

Programmable thermostats have been promoted (and mandated) as a means of saving energy. But programmable thermostats differ from the traditional conservation measures, such as insulation or a more efficient refrigerator, where simply installing the measure will save energy. In contrast, the occupants must actively program the thermostat and select settings that result in savings. Furthermore, observing the programmable thermostat-induced energy savings is experimentally difficult since energy savings cannot be observed directly; instead one must examine the *difference* in energy use between two periods. Few studies directly meter the gas for heating or electricity for cooling separately from other appliances. In addition, the differences in energy use may be partially attributable to differences with other appliance energy use, seasonal weather variations, or changes in occupants or economic conditions. Alternatively, one can measure the difference in energy use between similar homes with and without programmable thermostats. This approach is sometimes simpler but introduces other kinds of uncertainties. Perhaps these difficulties in evaluations explain why field studies of thermostat savings have shown mixed results.

One recent analysis of energy bills in about 7000 households concluded that savings of about 6% in natural gas consumption could be attributed to programmable thermostat use [61]. In Quebec, 90% of houses are electrically heated with room thermostats; a billing analysis study (more than 25,000 households) estimated that the use of programmable thermostats reduced the energy consumption by 3.6% [62]. In a survey conducted in Seattle with 2300 respondents, houses with programmable thermostats had on average a 9% reduction in electricity consumption [29]. Studies of cooling energy savings are less common.

Several field studies showed no significant savings in households using programmable thermostats compared to households using non-programmable thermostats [30,63–65]. Some of these studies are summarized in Table 1. The availability of a programmable thermostat did not change setback behaviors: people who were accustomed to setting back with a manual thermostat kept doing so, and did not increase their energy savings. Those who had not previously changed the temperature setpoints did not set back with programmable thermostats. Some researchers argued that homes relying on programmable thermostats consumed more energy than those where the occupants set the thermostats manually [66], especially with heat pumps [67].

The EPA reviewed these studies and concluded that consumers were not using programmable thermostats effectively due to programming difficulties and lack of understanding of terms such as setpoint [69]. As a result, the EPA discontinued the EnergyStar programmable thermostat program in December 2009.

Table 1
Summary of thermostat behavior and energy savings studies [68].

Organization	Investigators	Location & year	Sample size	Conclusions
Southern California Edison	Paul Reeves, Jeff Hirsch, Carlos Haiad	CA 2004	N/A	Energy savings depend on behavior and can be + or –
Energy Center of Wisconsin	Monica Nevius, Scott Pigg	WI 1999	299 Homes	No significant savings. PT's don't change behavior.
Connecticut Natural Gas Corporation	David Cross, David Judd	CN 1996	100 Homes	PT's cause no significant behavior change.
BPA/PNNL	Craig Conner	NW 2001	150 Homes	No significant behavior change/savings.
Florida Solar Energy Center	Danny Parker	FL 2000	150 Homes	No savings, some increases.

6. Usability issues

Programmable thermostats have not seen great market penetration; only about half are actually programmed to adjust temperatures at night or unoccupied times, and thus they do not necessarily save energy. The EPA review and other studies indicate that people find programmable thermostats difficult to understand, and lack the confidence and motivation to overcome difficulties in programming [64,70–74].

We recognize that there are many factors involved in people adopting and using a new device that are applicable; here we discuss Rogers' technology diffusion theory, Nielsen's factors of system acceptability, and usability guidelines.

Rogers' diffusion of innovation curve (Fig. 6) defines different attributes that affect the willingness and ability of consumers to trying new technology [75]. Rogers' theory describes why seemingly advantageous innovations, like the programmable thermostat, can take some time to diffuse in a social system. In some cases, policy has created a tipping point in driving adoption, especially between early adopters and the early majority; this has certainly been the case in California's higher adoption of programmable thermostats compared to the rest of the U.S.

Jakob Nielsen outlines factors in system acceptability, in Fig. 7. This figure is targeted for web interfaces, however, we feel it is applicable since thermostats are becoming more like other consumer electronics.

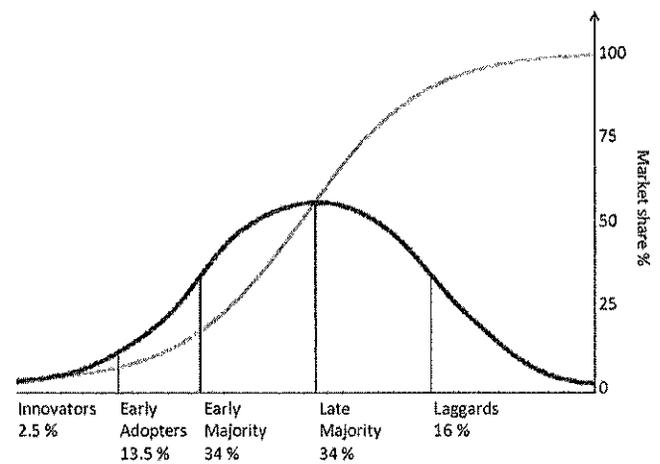

Fig. 6. Rogers' technology adoption or Diffusion of Innovation Curve [75].

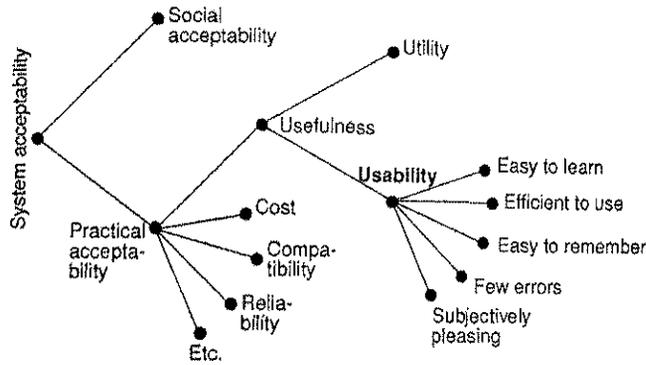

Fig. 7. Nielsen's factors in system acceptability [76].

In the International Organization for Standardization (ISO) Guidelines on Usability (ISO 9241-11 1998), usability refers to the extent to which a product can be used by specified users to achieve specified goals with *effectiveness* (the accuracy and completeness with which users achieve specified goals), *efficiency* (the resources expended in relation to the accuracy and completeness with which users achieve goals) and *satisfaction* (freedom from discomfort, and positive attitudes towards the use of the product) in a specified context of use [77]. In this section, we focus on some of issues mentioned in the literature on the use of programmable thermostats.

Our review of several U.S. and European studies collected a list of complaints and unexpected beliefs held by users on thermostats. Misconceptions about both energy and thermostats affect the use of thermostats, which arguably can be categorized under *social acceptability* in Nielsen's framework. Some people feel that heating all the time is more efficient than turning the heat off; in other words, they feel that turning down the thermostat for several hours per day actually consumes more energy because of the energy needed to heat the house back up to the comfort temperature [64,70]. Several studies have reported that consumers do not understand how their HVAC system works [36,78–82]. They may have incorrect mental models about creating comfortable indoor air temperature, especially since thermal feedback is delayed due to thermal inertia of the house. For example, they may think of the thermostat as an on–off switch or they may think the thermostat works as a valve: to accelerate heating, one must set the thermostat higher [80,83]. Many consumers do not know how much energy heating and cooling their home consumes or costs [70]. Other social acceptability issues may relate to priority of values: consumers may care about the environment, but value their comfort more [81,84]. In some cases, discomfort in entering a cold house discouraged people from lowering the temperature when they are away during the day [33]. In fact, in some countries a warm house is cozy and socially recognized [32]. Other social issues include gender differences in thermal perception or different needs and schedules of people in a household that make it more difficult to find agreement on the programmed temperature [53,54,80,81,85,86]. While some studies indicate residents found comfort in “fiddling” with their thermostats [35,60,87], other studies found that most people do not have interest in tinkering with their thermostats to optimize performance [38,78,88–90]. Other issues that are social in nature include a fear of the unknown: some people unfamiliar with a thermostat are afraid of using it in case there are terrible consequences [64,80,81,88].

The *practical acceptability* and *satisfaction* of using a programmable thermostat has many factors. Programmable thermostats cost more than manual thermostats, and consumers must expect

enough value or *usefulness* (whether convenience, cost-savings, or some other *utility*) to warrant the time and money to purchase and install the new device. At least one study suggested that the payback and convenience are not worth the cost [64]. Other practical concerns include compatibility with the current system; there are a few anecdotal reports of people mounting their new programmable thermostat sideways to match the “footprint” of the old manual thermostat so they wouldn't need to repaint the wall. A few studies mention that the programmable thermostat was located in an inaccessible location [80,81]; many are located in hallways that are poorly lit. Current ADA standards require the placement of the thermostat 48 in. (1.2 m) above the floor which may be more usable for those in wheelchairs, but less usable for others than the 60 in. (1.5 m) de facto standard. In addition, many houses have alternative heating or cooling systems (e.g., woodstoves) not controllable by thermostats [64,81]. While many people have predictable schedules, others' schedules are more variable which makes the programming useless [64,81].

The poor *usability* of programmable thermostats and the necessity to improve their ergonomics was highlighted almost thirty years ago by Dale and Crawshaw, who stated that “it is easy to blame them [thermostat users] for stupidity, but is slowly being realized that the problem of efficiency in practice properly belongs to the engineers or the system designers” [91]. A report from 1982 illustrating the application of human factors techniques to heating controls interfaces listed several flaws, such as small text size and knobs, difficulties reading in poor lighting and distinguishing the current mode of the device, and lack of feedback on programming [92]. Although the technology of the interfaces has greatly improved over the past decades, little has been achieved in overcoming these problems.

One important aspect of usability is learnability: is operation of the device *easy to learn*? The EPA review and many other studies indicate that programmable thermostats are too complicated to use [33,64,71,73,74,80,81,83,93], especially for the elderly [73,81,88,94,95]. A consumer reports lab test stated that the subjects had difficulty setting the current time and day [71]; other studies indicate problems with programming desired temperature and schedule [33,64,81,94]. Several studies report that buttons and/or font size of text are too small [71,81,89,91,92]. Other studies point to poorly understood abbreviations (e.g., “Clk” for clock, “Prg” or “Prog” for program) and terminology (e.g., set-point, program, default, zone) and confusing lights and symbols or icons [38,80,89,91,92].

Another aspect of usability is *efficiency*: how many steps does it take to achieve the objective? Boait and Rylatt reported the example of a thermostat that required a total of 28 steps to enter heating times, which were identical for each day of the week [74]. Freudenthal and Mook observed that programmable thermostat owners do not use all functions, even the ones they find valuable, due to poor interface design [94]. Several studies suggested that the layout of the interface itself was illogical, and thus difficult to navigate [89,91,92].

Since many thermostats at minimum require seasonal adjustment, the *easy to remember* factor of usability is important. Some thermostats have help or have a quick guide located on an inside cover. But many programmable thermostats require a manual, which can be 100+ pages long and are often unavailable when needed. Of the manuals themselves, Rathouse and Young reported that many people find them too technical, detailed and wordy, with not enough diagrams and attention on basics with procedural step-by-step instructions [81].

Another measure of usability is *few errors*. In a recent study in progress by one of the authors, Pritoni, nearly a fifth of households reported that the current time on their programmable thermostats

was incorrect by more than an hour. Poor feedback in setting a program was listed in a few studies as leading to errors [80,92].

We only found one study that addressed the aesthetics of the programmable thermostat (is it *subjectively pleasing?*) as a barrier to usability [17]. Anecdotally, one author has heard many complain of the lack of aesthetics, especially in the vein of, "it just looks complicated, I don't want to touch it."

7. Discussion

Programmable thermostats have largely fallen short of the goal of saving consumers energy. Some research suggests that improving usability may increase use and adoption of programmable thermostats towards facilitating energy-saving behavior. This section describes what usability testing has been done and what more is needed as well as describing what new features may help usability.

7.1. Usability testing

Although a wide range of studies has been conducted on temperature settings, thermal comfort, and efficiency of HVAC systems, little quantitative information is available on how people deal with temperature and environmental controls. A few researchers have performed quantitative usability tests on programmable thermostats.

Karjalainen completed qualitative and quantitative surveys on thermostat use in homes and offices in Finland, and then developed a prototype thermostat interface with usability guidelines and a user-centered design approach [80]. As an example of user-centered methods, six focus groups were conducted in the UK [81] to investigate issues in use of heating controls. Based on user experiences and complaints, a series of recommendations for manufacturers and installers was formulated to improve the next generation of thermostat interfaces, including the recommendation that manufacturers offer a variety of products of different complexity to suit different needs.

Freudenthal and Mook [94] developed a programmable thermostat interface with vocal messages that guide the users through the programming steps, in order to provide an interface usable for people with no knowledge of the device, even for elderly users. The device usability was tested by videotaping the interactions with a touchscreen computer of 14 people randomly selected among the population of Delft.

Sauer et al. investigated various types of enhanced user support (status, history, predictive, instructional and warning displays) on user performance [95]. Seventy-five subjects were asked to evaluate them. The highest scoring interface was the predictive display, which predicted the impact of heating setups on certain parameters, such as energy consumption, efficiency, and comfort level, thus helping users make informed decisions [95]. The more interactive and rich information displays (e.g. warnings) appeared to be useful for less experienced people. The results of this study suggested that different levels of support were appropriate for specific situations and groups of users.

A recent publication by the UK Building Control Industry Association [96] focused on the implementation of user interfaces of control devices for heating, cooling, and ventilation, analyzing the flaws of existing interfaces and providing usability guidelines for new products. The authors affirmed that usable controls improved not only user satisfaction and comfort, but also they provided higher energy efficiency (use of HVAC only when needed), helped to building management (local control versus central control) and provided users with faster response of the system (due to perceived control and feedback).

To our knowledge, the only comparative usability study on commercially available programmable thermostats was conducted by Consumer Reports [71].³ Twenty-five different thermostats were lab-tested to assess their energy performance and their usability. As a result, programmable thermostats were ranked according to these criteria and a series of problems with using thermostats were highlighted. Consumer reports did not explicitly state what parameters were considered to assess thermostat usability, and it did not appear that quantitative tests were performed. Moreover, the thermostats were tested in unusual conditions; namely, the users evaluated the thermostats while sitting down and in a well-illuminated room.

7.2. Recommendations

What features might increase adoption and usability of programmable thermostats? We discuss below some recommended features listed in the literature, as well as standards. The current trend in consumer electronics may help thermostat usability. Certainly adding thermostat functionality to existing interfaces, such as on the television or smart phone, may improve the use and usability. While home automation has been around for many years, perhaps today's more compelling interfaces will encourage consumer acceptance of automation and intelligence in home controls. Educating consumers with better feedback may encourage programmable thermostat use, by revealing how much heating or cooling energy homes consume and how modifying the temperature setpoint can save energy.

Improved feedback: recently energy consumption feedback has received a great deal of attention [97–108] with respect to changing energy consumption behavior. Cost and energy consumption data can be obtained from interval meters, user-installed sensors on meters or appliances, smart appliances, and other intelligent systems. This information can help users understand the connection between temperature settings, HVAC use, cost, and the environment. Some recent studies indicate that the estimated time expected to reach the selected temperature is a useful indication for users [17,80]. This feature may also enhance the users' perception of control of the system and discourage the use of the thermostat as if it were a valve.

Intelligent systems: automated systems can, in theory, limit the need for human interaction, such as eliminating thermostat programming by systems that learn occupancy schedules and thermal preference. Different solutions have been suggested to monitor the location of household members ranging from occupancy sensors [57,109–112] to Mobile GPS [17]. Occupancy data can also be predicted from historic energy consumption [74]. Sensors can be complemented by an intelligent controller that uses learning algorithms to recognize patterns (e.g., preference in temperatures and characteristics of HVAC and house) [57,74,113]. Intelligent systems can theoretically overcome some of the problems associated with human-thermostat interaction, although some users may be reluctant to surrender control. Clearly the optimal path is to provide choices in the balance between user control and automated features [57].

Communication: the thermostat can use a home gateway to communicate with other devices in a Home Area Network such as smart appliances, in home energy displays, and energy detectors. A thermostat could in theory exchange data with utilities and other service providers. Web/mobile interfaces already enable the control

³ While programmable thermostat manufacturers affirm they perform usability tests for their products, they do not disclose results because they consider the user interface a key feature for sales.

of thermostat configurations from personal computers, cell phones, and potentially Internet-connected television. Enhanced communication with other devices in the home and with the outside world may increase thermostat usability by piggybacking on other devices with more interesting and provocative user interfaces that are easy to use.

Other improvements: voice-controlled thermostats, such as by Talking Thermostats.com and Innotech, may improve thermostat usability for elderly or motion-disabled people [114,115]. Voice-activated devices could dramatically simplify the interaction with thermostats, especially in case of out-of-schedule requests [81]. Some researchers have proposed the development of goal-setting strategies for occupant interactions with programmable thermostats [85]. Some studies have suggested new functions considered useful to consumers. One is a “boost button” (an additional hour of heating or cooling) [81], similar to the plus-1-minute button commonly found on microwave ovens. This function could provide flexibility to a programmed schedule; in other words, a single button press could extend the space conditioning to accommodate an impromptu change in schedule. In the same vein, another potential function is a timer [90] to turn on or off heating or cooling for a specific amount of time. A third helpful function is an estimation of the time needed to reach the desired temperature [80]. These features are not currently available in any of the surveyed U.S. thermostats. In response to demands to simplify the interfaces, a single button push triggering an energy-saving mode has been proposed in EnergyStar Program Requirements. Aesthetically improved interfaces are suggested by several studies to improve social acceptability and increase likelihood of adoption. Another area of improvement is motivation: the “Green Machine” [116] is a mobile application that is an example of *persuasive technology*—defined by BJ Fogg as technology created for the purpose of changing people’s attitudes or behaviors [117]. The Green Machine interface provides a visualization of energy consumption in comparison to user goals and utilizes social networking to motivate users to reduce their energy consumption.

In the long term, standardization can improve usability, because people have to learn a system only once. In our survey of thermostats currently available in the market we found a substantial lack of standardization not only in the interaction design, but also in symbols, icons, and text. The most basic functions and concepts are implemented in different ways. Standardization of interfaces, symbols, and icons has been successfully implemented in other sectors such as in car dashboards (SAE Standards [118]) and in power controls for electronic equipment (IEEE 1621 [119]).

7.3. Future work

We suggest that a “good” thermostat design is not only usable (easy to use/learn/remember), but also useful (provides needed functions for its users) in a way that is cost-effective and compatible with existing equipment. Arguably, a good programmable thermostat would facilitate energy-saving behavior as well as provide comfort and convenience for the people using it. But do thermostats really save energy? What else factors into their adoption and use? And what is good usable design? To whom?

We recognize several needed areas of research. Additional research is needed to determine the energy savings from programmable thermostats and link the amount of savings to initial conditions and usage of the thermostat’s features. In addition, we uncovered little exploration of thermal comfort in homes; this is well studied in commercial buildings and has led to better control strategies. Understanding residential thermal comfort could improve comfort and save energy. Another issue entirely is addressing motivation to use the thermostat to save energy. Are

there softer non-technical means of achieving the same goals, for example, with social networking with Facebook or encouraging behavior change by promoting positive social norms in utility bill inserts?

At the beginning of this section we listed the few quantitative usability studies we could find. While a few surveys and some studies point anecdotally to widespread user difficulties with programmable thermostats, the literature contains relatively few usability studies with quantitative data and analysis. (Access to the thermostat manufacturers’ consumer telephone help lines would be invaluable.) Lack of usability studies is a critical weakness in the design of advanced thermostats because usability is among the most frequent complaints about them.

We have begun some initial exploratory usability studies which are described in [120]. We think that there is not a “one-size fits all” solution; we are exploring the elements of good thermostat design, and are currently outlining design principles of programmable thermostats. While we briefly mention technology adoption theory and guidelines for web user interface design in this review, we plan further research to look at usability in other fields, such as medical equipment and dashboards.

8. Conclusion

Thermostats play a vital role in both providing comfort to people in their homes and controlling the most energy intensive systems in the home—heating and cooling. This review began with a brief history of the thermostat, outlined the basic features, discussed ownership and use of manual and programmable thermostats in the U.S., described the energy savings—or rather lack thereof—and pointed out usability issues. Our review of thermostats indicates that the thermostats designed and promoted by energy conservation policies have had slow penetration into the market and are used as designed in only half of the homes in the U.S. In general, the energy savings from using programmable thermostats are less than predicted, although we acknowledge that these evaluations are difficult to perform.

The number and variety of new features for programmable thermostats is increasing, which further complicates the device. One example is the programmable communicating thermostat for residential demand response. Many utilities are exploring time-varying price tariffs to reduce peak electricity demand—driven primarily from space heating and cooling. Yet, overlaying price-response on the current functionality of programmable thermostats will only increase the complexity of this already misunderstood and underutilized device, much less introduce a tariff structure completely foreign to many consumers.

User complaints culled from the literature include misconceptions about energy use and how thermostats work, lengthy and obtuse operating manuals, and social and practical barriers to using programmable thermostats. The user misconceptions are particularly important since they may encourage incorrect usage that cannot be easily overcome by better interfaces. When users complained about the thermostats themselves, they noted in particular their complexity, small size of buttons and text, confusing terms and symbols, and the number of steps needed to program the devices.

Several studies indicated disparate attitudes towards thermostats. Some users preferred never to adjust their thermostats—to the point of being afraid of touching them; some believe that changes in thermostat settings consume more energy. Others tinkered with their thermostat several times per day, and prefer the control of manual adjustment to a set program. These groups will have different priorities for top-level features.

Our recommendations for improved usability include access through a web portal and use of audible commands and even voice

recognition. The literature revealed some functions that would be desirable to some users but are not available in U.S. models, such as a “boost” feature that would provide an extra hour of operation (similar to the “plus one minute” feature on a microwave oven). One study found that users liked a feature that would indicate how long it would take to achieve the desired temperature.

A goal of future thermostats will be to overcome the misconceptions about thermostat operation and to minimize the number of interface-related complaints. At present, however, designers lack the foundational research to determine which thermostat features succeed or fail. We are encouraged by EnergyStar’s inclusion of usability metrics in the future thermostat specification and hope that this effort leads to more quantitative usability research as well as building on the success of intuitive popular consumer electronics.

Finally, we note that the thermostat is only one of many devices where human interaction plays a role in energy consumption. We expect a similar discourse in the future on in-home energy displays, lighting controls, as well as household appliances (such as televisions) that focus on making energy consumption more transparent and user interfaces more usable.

Acknowledgements

We wish to thank Jessica Granderson, Dhawal Mujumdar, Becky Hurwitz and Margarita Kloss for their contributions, Bruce Nordman for providing comments and input on a review draft of this study, and Iain Walker, who was a co-author of an earlier report from which we drew. In addition, we thank the California Energy Commission for early support through a closely related project.

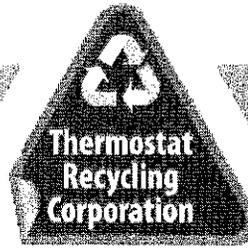

We gratefully acknowledge the support of the Office of Energy Efficiency and Renewable Energy, Building Technologies Program, of the U.S. Department of Energy under Contract No. DE-AC02-05CH11231.

Sacramento, CA 95812

Re: 2010 Thermostat Recycling Corporation's Annual Report

Dear Ms. Batarseh:

Attached is TRC's 2010 annual collection report for the Department. To the extent practicable TRC has made its best effort to be responsive to the Department's request for expense and collection data. A copy of this report will be posted on TRC's website at www.thermostat-recycle.org.

TRC would like to take the opportunity to summarize some of its major accomplishments in 2010.

- Notwithstanding continued economic challenges to the HVAC industry, the national recovery of thermostats increased by 29 percent, diverting almost 1,900 pounds of mercury from solid waste.
- Industry participation in TRC continued to grow and by the end of the year TRC represented 29 manufacturers that historically branded and distributed mercury switch thermostats.
- TRC continues to see substantial growth in access to the program, adding over 700 new collection locations in 2010. TRC saw solid growth in all collection location types in 2010.

TRC is now in its second year of the mandatory program in California. TRC saw a 77% increase in the number of intact mercury thermostats recovered through the program in California. TRC collected 13,340 whole thermostats in 2010 from California locations. Only one state, Maryland, had higher collections last year.

Looking towards 2011, we are looking forward to the continued expansion of the program and are always open to discussing strategies to help build the program.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", written over a horizontal line.

Mark Tibbetts
Executive Director

2010 Thermostat Recycling Corporation Annual Report

Collection Data

Table 1: 2010 California Collections by Brand

	Count Whole Hg Thermostats	Count Hg Switches

Orphan Waste	257	4,778
TOTAL	13,340	29,968

TRC recovered 185.8 pounds of mercury from 13,340 intact mercury thermostats and mercury switches from California collection locations in 2010. This is an increase of 77% over the 7,542 intact mercury thermostats collected in 2009. California ranked second among the 46 states from which TRC recovered thermostats in 2010.

Waste Mercury-Added Thermostat Management

Bins with waste mercury-switch thermostats are received at the fulfillment/processing center in Golden Valley, Minnesota. The facility is owned and operated by Honeywell International under contract with TRC.

Bins are received at the loading dock and sent to the TRC processing area. The bin and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name, city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The bin is returned to the business that sent it in with a new prepaid address label within 72 hours of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The containers are returned from the storage area to the TRC processing area to have the mercury switches removed from the plastic

housing. Universal Waste Regulations require the disposal of waste within 12 months of generation. TRC's processor requires that the disposal occur within 6 months of generation and TRC follows the more stringent requirement. Small quantities of thermostats are removed from the container, which is then closed again, and placed at the switch removal workstation on a tray that contains any potential mercury spillage. The switches are removed from the thermostats and placed into a 2 quart container at the work station. In the event that a switch breaks and mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean up and disposal of mercury. TRC processing area is equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

The 2 quart container is emptied into a special 55 gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are drawn away and vented when the drum is opened.

The 55 gallon drum is then shipped to Bethlehem Apparatus Corporation in Hellertown, Pennsylvania for final processing of the mercury switches. Bethlehem Apparatus meets or exceeds all local, state, federal and EPA regulations for the management of the product. Bethlehem's approvals for mercury recovery/recycling include:

- EPA - identification No. PAD002390961 (Bethlehem Apparatus Co., Inc.)
- EPA BDAT Requirement - satisfied by all recovery operations
- CERCLA (Comprehensive Environmental Response Compensation and Liability Act)
- Pennsylvania Department of Environmental Protection

The facilities' processing follows all EPA guidelines and regulations. TRC has a facility license from Hennepin County Minnesota for the operation of the TRC. Honeywell, Inc. has a Hazardous Waste Generator license from Hennepin County. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

Program Education and Outreach

TRC marketing and promotion efforts targeted key audiences in California. Our objective was to raise awareness of key components of California's mercury thermostat law and to affect recycling behavior of the generators of waste mercury thermostats. Below is a summary of activities and channels we utilized in support of this effort.

Wholesaler Recruitment/Engagement—TRC continued to engage wholesale distributors to ensure that they are aware of the 1) mandate to collect waste mercury thermostats in California, and 2) the availability of the TRC program as a simple, low-cost means of compliance.

Engagement with wholesalers took many forms (see below for information on specific activities by channel). Outreach included trade shows and industry meetings, direct outreach and

engagement of specific distributors, earned media through industry trade press, and paid advertising.

TRC expanded efforts with the Heating Airconditioning Refrigeration Distributors International (HARDI) trade association last year. HARDI members represent approximately 80% of the domestic wholesale market for HVACR equipment. Most significantly, in October, TRC and HARDI entered into a formal agreement to promote the TRC program to HARDI's members. Aspects of this agreement include the development of website content on mercury thermostat regulations and an annual award recognizing the contributions of HARDI member(s) to the program. TRC sent correspondence [see Appendix H(1) for a copy of correspondence] to the executives of all 450 HARDI member companies inviting them to meet with TRC staff at the HARDI annual meeting.

TRC attempted to engage with the American Supply Association both in writing and by phone [see appendix N for a copy of correspondence] as well.

HVAC Contractor Engagement (including utilities)—TRC joined the Institute of Heating and Air Conditioning Industries (IHACI) in April, 2010. IHACI is a non-profit trade association of contractors, manufacturers, distributors, utility firms, and related businesses actively engaged in the heating, ventilation, air conditioning, refrigeration, and sheet metal industries. TRC understands that IHACI is the largest HVAC trade association in California. TRC provided information on the California law and encouraged IHACI to inform its members on the need to recycle. This resulted in a number of articles on thermostat recycling in IHACI's Indoor Comfort News.

TRC engaged the California State Licensing Board (CSLB) and provided information on the California Mercury Thermostat Act for inclusion in CSLB's newsletter (see appendix M). Information on mercury thermostat recycling was provided to the California Public Utilities Commission and its staff. TRC provided similar information to the California Energy Commission [see appendix K and L for copies of the correspondence].

Retailer Engagement—TRC engaged with representatives of major thermostat retailers in 2010 to ensure they were aware TRC was open to their participation in the program.

Summary of Outreach by Channel

Local, Regional, and National Trade Shows—TRC attended and exhibited at the following trade shows relevant to California:

January 25-27: AHR Expo, Orlando, Florida. The largest national trade show for HVACR industry. TRC staff exhibited and promoted program to HVAC contractors, HVAC manufacturers, and HVAC distributors. The show had a total registered attendance of 44,000.

May 24-25: National Oil Heat Service Managers annual meeting and trade show, Providence, Rhode Island. TRC also sponsored the opening reception for additional visibility at the event.

June 23-24: National Town Meeting for Demand Response, Washington, DC. This was a two day event focusing on demand response and included both utilities and thermostat contractors. TRC exhibited at the event.

July 27-29: North American Hazardous Materials Management Association (NAHMMA) Annual Meeting, St. Pete Beach, Florida. TRC exhibited and also presented on the program.

September 23-24: Comfortech, Baltimore, Maryland. Comfortech is a national trade show for HVAC contractors sponsored by Penton Media, publishers of Contracting Business.

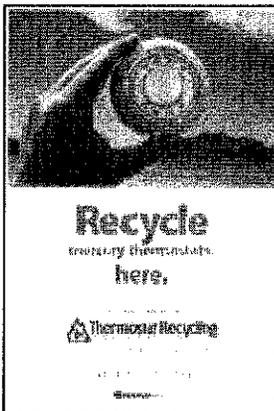

October 23-26: HARDI annual meeting, Houston, Texas. TRC exhibited at the event, which targets representatives of approximately 80% of the wholesale market for HVACR products.

November 17: IHACI Trade Show, Pasadena, California. TRC exhibited at the largest annual HVAC trade show in California. The show was sponsored by the Institute of Heating and Air Conditioning Industries Association. The one day show had a total attendance of over 3,600.

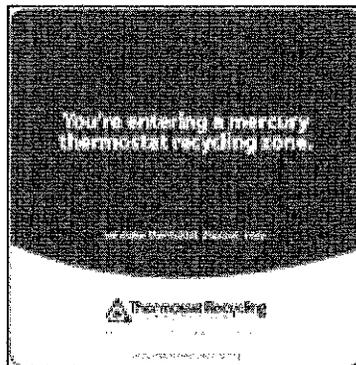

Program website—In October 2010 TRC launched a new website. The site updated and reorganized content; making pertinent information on the program to various audiences more accessible. The new website may be viewed at www.thermostat-recycle.org.

Promotional Took-kit—Concurrent with the launch of the new website, TRC added high-resolution templates of a number of promotional items. These items are free to use by TRC collection points. Developed for HVAC wholesale distributors, these items are available at no cost to TRC collection points to assist them in promoting the program to their customers. Items include a poster, bill stuffer, invoice template, cling sticker, banner, postcard, and print advertisement. Once the inventory of the current poster and window cling is used, TRC will replace those items with materials from the toolkit.

Window Cling

Advertisement

Earned Media

TRC sent letters to various stakeholders in California. They are as follows:

National Demolition Association (NDA): On May 4, 2010, TRC sent a letter to the Chair of the National Demolition Association's Environmental Committee as follow up to a phone conversation discussing TRC and NDA's promotion of the program [see appendix A]. The Chair presented information about TRC to the NDA's Board of Directors and ensured a link to TRC's website was included on NDA's website

American Public Works Association (APWA): On September 13, 2010, TRC sent a letter to eight California-based chapters of APWA to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix B]. The letter explained TRC's program and that participation is free for local governments.

Air Conditioning Contractors of America (ACCA): On September 13, 2010, TRC sent a letter to the West Coast chapter executive to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix C]. The letter articulated that all HVAC contractors were required to recycle waste mercury thermostats and prohibited from leaving the waste at the customer's home.

Plumbing, Heating, and Cooling Contractors of America (PHCC): On September 13, 2010, TRC sent a letter to eight California-based chapters of PHCC to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix D]. The letter articulated that all HVAC contractors were required to recycle waste mercury thermostats and prohibited from leaving the waste at the customer's home.

Sheet Metal and Air Conditioning Contractors' National Association (SMACNA): On September 13, 2010, TRC sent a letter to eight California-based chapters of SMACNA to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix E]. The letter articulated that all HVAC contractors were required to recycle waste mercury thermostats and prohibited from leaving the waste at the customer's home.

California Household Hazardous Waste Facilities: On December 1, 2010, TRC sent a letter to 177 Household Hazardous Waste Facilities in California to bring attention to the law (A.B. 2347) in California and TRC's program [see appendix F]. The letter explained TRC's program and that participation is free for local governments.

TRC also received coverage in national trade press on numerous occasions. For instance the program was covered in *Indoor Comfort News* (June 2010, July 2010, and October 2010). The HARDI/TRC media release (December, 2010) was covered in *Waste and Recycling News* and *Air Conditioning Today*. TRC's program also received extensive coverage in the HARDI Convention Daily (distributed to all HARDI annual convention attendees) and *HVACR Distributor* (see appendix G for examples of media coverage).

Paid Advertising

TRC ran rotating banner advertisements (Exhibit 1) on the websites contractingbusiness.com and Hvac-talk.com for the months of April, May and June. The advertisement was animated with scrolling images of thermostats, the final message directed contractors to TRC's website.

Both sites are national and target the HVAC contracting audience. Contractingbusiness.com averages 59,000 page views and 27,000 unique visitors per month. Hvac-talk.com averages 1.5 million page views and 221,000 unique visitors per month.

TRC ran a quarter page advertisements in *Indoor Comfort News* in the April, August, and November editions (see exhibit 2). *Indoor Comfort News* has 25,000 subscribers, primarily in the Western United States. It is sent to all licensed C-20 contractors in California and has a total audience of approximately 250,000.

Exhibit 1: Web Banner Advertisement

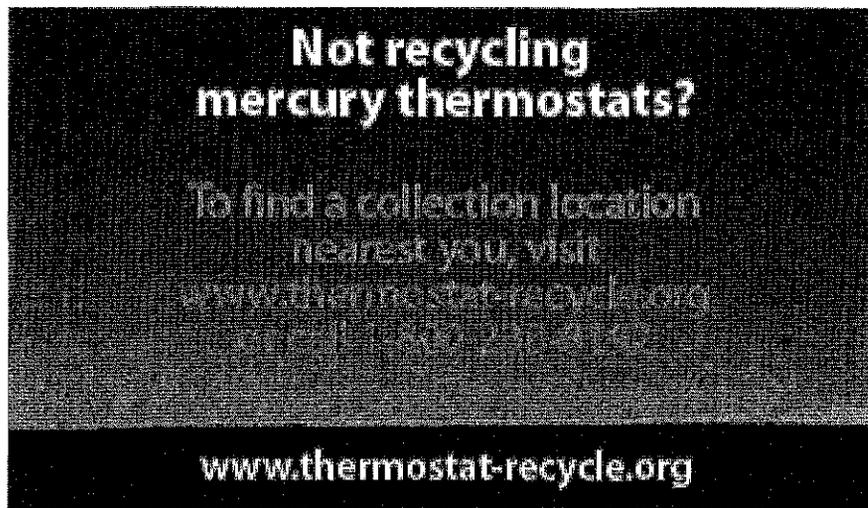

Exhibit 2: Print Advertisement *Indoor Comfort News*

Program Expenses

TRC program expenses for 2010 reflect changes in marketing strategy and certain one-time expenses that occurred in 2009. For instance, in 2009 TRC expended over \$60,000 on the California study (reflected in “administration”) on mercury thermostat disposal and over \$20,000 in printing expense (reflected in “marketing”) for incentive coupons as mandated by Maine and Vermont law.

TRC also shifted from certain paid advertising that was deemed not effective and instead emphasized industry events and trade shows. As such, travel increased significantly in 2010 as TRC staff (including a new full-time outreach staff person hired in November 2009) regularly attended both national and regional industry trade shows.

In 2010 TRC also began the development of new custom database and, while budgeted for 2010, less than 30% of the project expense was booked during the fiscal year and will be carried over to 2011.

Exhibit 3: 2010 Program Expenses

TRC Staff and Administration	\$231,757
Recycling Costs	\$300,096
Insurance	\$17,771
Statutory Incentive Payments	\$40,380
New Collection Containers	\$18,219
Travel	\$28,809
Direct Expenses for Marketing & Outreach	<u>\$76,696</u>
Total	\$713,728

TRC expenses include:

- TRC Staff and Administration: Includes staff and consultants, general office expenses, telecommunications, legal, and other administrative expenses. Includes labor costs to implement California program.
- Insurance: Pollution and liability insurance.
- Travel: All travel in 2010 and includes travel to trade shows to promote program.
- Recycling Costs: All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and data management.
- New Collection Containers: Direct cost for new containers ordered in 2010.
- Marketing/Outreach & Printing: Includes direct costs to develop and print program collateral; direct mail, website development, national and state advertising, sponsorships and other outreach activities. Marketing/Outreach does not include any TRC labor costs.

A copy of TRC’s 2009 IRS Form 990 is attached in appendix H.

Recommendations/Next Steps

TRC was pleased with the program results in 2010. While in absolute numbers TRC still has much to accomplish, the rate in growth in collections is substantial.

In 2010 TRC recovered 13,340 whole thermostats from participating collection locations in California. TRC also recovered 4,207 mercury switches that had been removed from thermostats¹.

Overall, collections of whole thermostats are up 90% since the law's passage in 2008. Only collections in Maryland exceed California's total in 2010.

TRC also continued to add collection locations in 2010. At the end of 2009 there were 321 locations in California that had requested recycling containers. As of March 2010, the number had increased to 428. The majority of which were wholesale distributors.

Despite our success, much work remains to be done. The three most significant challenges to TRC are:

1. Collection point participation: TRC remains concerned with the level of participation among HVAC wholesale distributors. Out of the 500 plus recycling containers TRC had provided to collection points, only 144 were returned in 2010. While the program continues to add locations, it is the *active* collection of thermostats that is essential to the program's long term success. The program must be visible at the location and staff must be informed about the program and encourage participation.

TRC's challenge is that the collection locations are independent businesses that it has no control over. TRC has no enforcement authority and can not compel any collection location to take any action including ordering a container, shipping a container when full, or promoting the program.

2. Marketing to HVAC contractors and other stakeholders: Marketing to HVAC contractors remains challenging. The industry is diverse and is dominated by thousands of small contracting businesses that subsequently employ the technicians that are the primary generators of the waste.

3. Consumer facing promotion: As the Skumatz study indicated, the replacement of a mercury thermostat by a homeowner is likely a one-time event that may occur today or 15 years from now. Moreover, the study indicated that the vast majority of removals were conducted by professionals, not homeowners. Additionally, the disposal of waste thermostats occurs after the removal of the existing thermostat. As such, developing effective marketing strategies remains challenging.

¹ TRC strongly discourages the shipment of mercury switches removed from thermostats, however from time-to-time locations may ship them to TRC despite TRC policies prohibiting their shipment. TRC is unable to estimate the number of whole thermostats this represents as each thermostat may contain between 1 and 6 switches. Each switch contains 2.87 grams of mercury.

Looking towards 2011 and beyond, TRC has refined its marketing strategy and will be focusing on the following:

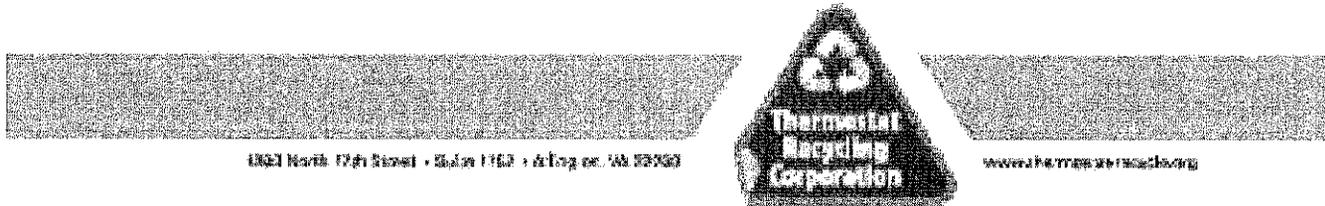

1. Directly engaging wholesale distributors: TRC has seen great success in California and other states where wholesale distributors actively promote the program to their customers. This entails doing more than required by law. TRC's new promotional tool-kit was the first step in this strategy. Our objective is to make it simple (and low-cost) for distributors to promote the program. Several large wholesale distributors see value in the TRC program and have embraced this concept. We see the cooperative partnership with HARDI as essential to this strategy. This relationship provides TRC direct access to key decision-makers at many wholesale distributors in the United States.
2. Leveraging member marketing channels: TRC is working with its member companies in developing strategies to leverage their marketing/sales channels to promote TRC. This may take the form of co-branded collateral promoting the program, award/recognition programs, or other activities that reinforce the importance and value of the program to distributors.
3. Expanding national and regional promotion of the program: In 2010 TRC attended ten national and/or regional industry events. TRC found significant value in attending national and some of the regional shows and will expand this effort in 2011. TRC also (see below for summary of specific activities) expanded the scope of its national/regional advertising in 2011.
4. At the state-level TRC sees opportunities to focus on key sectors in partnership with state regulators. Energy efficiency programs led to significant increases in collections in Maryland, Michigan, Kansas, and Texas in 2010 and we hope to build upon that in other states where opportunities exist. TRC also sees opportunities in encouraging collection point participation in collaboration with state regulators.
5. TRC is also committed to improvement in the program's "infrastructure." TRC will bring a new database into production in 2011 and this will lead to significant improvements in our ability to manage data (including the search tool on TRC's website). TRC is also developing additional collateral in 2011, including point-of-sale information, new advertising creative, and contractor materials.
6. TRC is exploring developing a consumer facing program that serves dual purpose of raising awareness among consumers on the need to recycle mercury thermostats and recognizing HVAC contractors that properly manage waste mercury thermostats. Initial plans are to leverage the channels afforded by new media, including social media in this effort.

In 2011, in support of this marketing strategy, TRC among other things will:

- Attend and exhibit at several national and regional industry trade shows (including the Greater Los Angeles Plumbing Heating Cooling Contractors trade show in March and the IAHCI show in November).

- Expand its advertising buy in www.contractingbusiness.com and www.hvac-talk.com to 4 months (spring and fall). TRC is also developing new creative for this campaign. TRC will repeat the advertising buy in *Indoor Comfort News* but with updated advertising copy
- Place a postcard insert in HVACR Business (April and September issues) that will go to 12,000 subscribers in states, including California, with mercury thermostat disposal bans and/or mandates for recycling.
- Update its website to recognize and promote HVAC distributor participation.
- Directly recruit HVAC distributor participation in the program and encourage distributors to actively promote the program to their customers.
- With HARDI, develop an award program that recognizes the HVAC distributors' contribution to the success of the program.
- Continue efforts to engage with other industry stakeholders and build support for the program.

Appendix A: Correspondence to National Demolition Association

May 4, 2010

John Lloyd
Vice President
Lloyd's Construction Services, Inc.
7207 West 128th Street
Savage, MN 55378

Dear Mr. Lloyd:

This letter is to serve as a follow-up to our email conversations regarding outreach efforts between the National Demolition Association (NDA) and the Thermostat Recycling Corporation (TRC).

We would like to thank you again for your efforts in presenting information about TRC to the Board of Directors as well as the Environmental Committee at the NDA 2010 Convention. We also appreciate NDA's website including a link and information on TRC's program. Once our website updates are complete, we plan on incorporating a link directing to NDA's website as well.

We look forward to continued collaboration on this issue. We welcome and appreciate the support and assistance.

Please feel free to contact me at email: mtibbets@nema.org or (703) 841-3243 if you need further assistance.

Thank you for your time.

Sincere Regards,

Mark Tibbets
Executive Director

Appendix B: Correspondence to APWA Chapters

September 20, 2010

Kevin McCune
President
APWA, Central Coast Chapter
100 Civic Center Plz # 8001
Lompoc, CA 93436

Dear Kevin McCune:

I am writing this letter to bring your attention to recently passed legislation (AB 2347) in California requiring the proper disposal of mercury thermostats. As you may be aware, mercury thermostats contain between 3 and 12 grams of mercury and it is illegal to throw them in the trash in California.

As an industry-supported non-profit, Thermostat Recycling Corporation (TRC) works to facilitate the collection and proper disposal of mercury thermostats. Under California law AB 2347, participation in TRC's waste mercury thermostat collection program is free for local governments. TRC will provide collection containers at no cost to any California local government for use at house hold hazardous waste collection facility or household hazardous waste event. Additionally, TRC assumes all costs to ship and recycle the waste mercury thermostats.

TRC seeks your assistance in getting the word out to your members to raise awareness about the issue and TRC's program. Included with this letter is the sign-up form for California HHW facilities to participate. Additionally, we have attached informational copy to use in a newsletter or online publication.

For more information on the TRC program, or to sign up for the program, please visit TRC's website at www.thermostat-recycle.org/California. TRC can be reached by email at TRC@thermostat-recycle.org or by calling the undersigned at 703-841-3343.

Sincere Regards,

Virginia Borchardt
Communications and Outreach

Appendix C, D, & E: Correspondence with HVAC Stakeholder Organizations

September 9, 2010

Dear :

This letter is to inform you of a law in California that may be of concern to your organization. The Mercury Thermostat Recycling Act of 2008 (A.B. 3347) requires all HVAC contractors that remove a mercury thermostat from service to take the waste thermostat to a collection location. Contractors are specifically prohibited from leaving mercury thermostats at a customer's premises.

As an industry-supported non-profit, Thermostat Recycling Corporation (TRC) works to facilitate the collection and proper disposal of this product at its end of life. The program provides HVAC contractors and homeowners a no-cost means to properly dispose of waste mercury thermostats. TRC accomplishes this through a simple reverse distribution program where HVAC wholesale distributors act as collection points for waste mercury thermostats. TRC is asking for your help in getting the word out to your members in California, with the goal of diverting as many mercury thermostats from the solid waste as possible.

Additionally, some HVAC contracting businesses have the option to directly participate in TRC. HVAC contracting businesses with 7 or more technicians or those that serve rural communities are eligible to sign up and collect mercury thermostats. After an initial fee of \$25.00, TRC assumes all costs to ship and properly dispose of mercury thermostats as many times as collection locations find necessary.

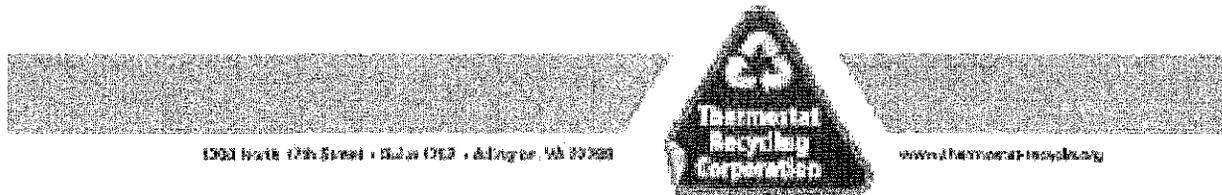

Included with this letter is short newsletter copy that can be used to bring awareness of California law and TRC. Though mercury thermostats aren't a significant source of pollution, they are an easily controlled one. We are asking your help in protecting California's environment by promoting the recycling of mercury thermostats to your members.

For more information on the TRC program, or to sign up for the program, please visit TRC's website at www.thermostat-recycle.org. TRC can be reached by email at TRC@thermostat-recycle.org or by calling the undersigned at 703-841-3143.

Sincere Regards,

Virginia Borchardt

Westlake Works With IHACI to Offer Property & Casualty, Liability & Workers Comp and Employee Benefits

Westlake Risk & Insurance Services (WRIS) is Westlake Village, Calif.-based independent insurance agency. Its goal is to assist professionals in all insurance needs, from commercial coverage to personal lines. They have assessed the needs of members of the Institute of Heating and Air Conditioning Industries, Inc. (IHACI) and offer a package of insurance policies that properly address unique or underinsured risks.

Steve Stanfield, CFC, president, WRIS, heads up the Property & Casualty, Liability & Workers Compensation for IHACI members. "Westlake Risk is dedicated to providing our commercial clients with the highest level of service they deserve," he said.

Included within the offered service platform are the following:

- Westlake Risk & Insurance along with IHACI have developed a customized insurance program with Golden Eagle Insurance, a subsidiary of Liberty Mutual for IHACI members. Members can maintain their prior relationships but need to provide instructions to agents on the coverage's affiliation;

- If Golden Eagle is unable to offer terms, Westlake Risk & Insurance has access to over 100 highly rated insurance carriers providing customized coverage for

Mercury Collection

The Department of Toxic Substances Control (DTSC) has issued a notice to contractors that the Mercury Thermostat Collection Act of 2008 became law on July 1, 2009. It requires that contractors and persons engaged in building demolition properly manage out-of-service mercury-added thermostats.

The Mercury Thermostat Collection Act of 2008 imposes requirements on "any contractor who installs heating, ventilation and air conditioning (HVAC) components and who removes a mercury-added thermostat." Contractors are required by law to handle and transport out-of-service mercury-added thermostats in accordance with the Universal Waste Regulations found in California Code of Regulations, title 22, chapter 29. In addition, contractors must dispose of out-of-service mercury-added thermostats at a collection location that is operated in accordance with Universal Waste Regulations.

For information on the requirements for Universal Waste Regulations, please visit DTSC's universal waste web page at www.dtsc.ca.gov/HazardousWaste/universal/WUW_thermostats_N3.pdf.

Collection bins for out-of-service mercury-added thermostats are required by law to be provided at certain HVAC wholesale locations in California. To find a HVAC wholesale collection location near you, visit www.dhmsm.com/epc/epc.asp. Collection bins may also be found at local government agency hazardous materials waste (HMTW) collection facilities. To find a HMTW collection facility near you, visit www.dtsc.ca.gov/HazardousWaste/UniversalWaste/HMTW.htm.

The DTSC has authority to enforce its requirements and will use this authority as appropriate to ensure compliance. Failure to comply may result in penalties up to \$25,000 for each separate violation or, for continuing violations, for each day that a violation continues.

Additional information is available on DTSC's website at www.dtsc.ca.gov/HazardousWaste/Mercury_Therm_Act.cfm, or call (619) 738-6942.

WASTE RECYCLING NEWS

RECYCLING BRIEFS

SCRAP

Schnitzer to expand auto parts biz

A series of transactions will expand Schnitzer Steel Industries' auto parts business, the company said.

The company acquired most of the assets of Waco U-Pull-It Inc. of Waco, Texas; a facility in Stockton, Calif., that will be developed into a specialty self-service facility; and a property adjacent to one of the company's existing facilities in Portland, Ore., that will allow that facility to expand.

"These three transactions continue the expansion of the footprint of our auto parts business and demonstrate the disciplined execution of our stated strategy to develop scale in core supply regions by obtaining scrap at its earliest stage of disposal," said Tamara Lundgren, CEO of Schnitzer Steel Industries.

The Waco acquisition adds to SSI's existing operations in the Dallas/Fort Worth area and in San Antonio. Lundgren called Texas "a high-growth market."

SSI's auto parts business sells used auto parts through 68 self-service facilities located in 14 states and in two Canadian provinces. The company also recycles and exports metals and has a steel manufacturing business.

Appendix H(1): Copy of Letter to HARDI Members

October 7, 2010

Dear Jess Hill:

If you have operations in California, Iowa, Illinois, Maine, Montana, New Hampshire, Pennsylvania, Rhode Island, or Vermont, please plan on visiting with Thermostat Recycling Corporation (TRC) staff at HARDI's Conference Booth Program on Monday, October 25, during HARDI's annual meeting in Houston, Texas. TRC staff will be at booth 429 and attending the full conference.

As you may be aware, these states have passed mercury thermostat legislation. Among other things, the legislation requires all HVAC wholesale distributors with facilities in these jurisdictions to act as a collection point for waste mercury-containing thermostats. While many wholesale distributors have taken advantage of TRC's program and ordered collection containers, many have not begun to actively collect mercury thermostats at all locations in these states.

Failing to act as a collection point could result in penalties that range from sales bans on residential controls to civil penalties up to \$25,000 a day per facility.

TRC staff will be prepared to brief you on your specific legal requirements in each state, which of your facilities are signed up for the program, and the volume of thermostats collected at your locations. TRC staff will also explain how manufacturers, through TRC's take-back program, make compliance easy and nearly cost-free.

If you don't have legal obligations in the states where you have operations, participating in TRC's program is still a great way to promote your business as a "green business" and provide a valuable service to your customers with little direct cost to you. Please visit our booth and we can provide you with all the information you need to participate in and promote the TRC program.

For more information on TRC, please visit our website at www.thermostat-recycle.org. If you would like to speak with TRC staff in advance of HARDI's meeting, please do not hesitate to contact the undersigned at 703-841-3246 or at mark.tibbetts@nema.org.

Sincere Regards,

Application for Extension of Time To File an Exempt Organization Return

OMB No. 1545-1709

File a separate application for each return.

- If you are filing for an Automatic 3-Month Extension, complete only Part I and check this box **X**
 - If you are filing for an Additional (Not Automatic) 3-Month Extension, complete only Part II (on page 2 of this form).
- Do not complete Part II unless you have already been granted an automatic 3-month extension on a previously filed Form 8868.

Part I Automatic 3-Month Extension of Time. Only submit original (no copies needed).

A corporation required to file Form 990-T and requesting an automatic 6-month extension - check this box and complete Part I only

All other corporations (including 1120-C filers), partnerships, REMICs, and trusts must use Form 7004 to request an extension of time to file income tax returns.

Electronic Filing (e-file). Generally, you can electronically file Form 8868 if you want a 3-month automatic extension of time to file one of the returns noted below (6 months for a corporation required to file Form 990-T). However, you cannot file Form 8868 electronically if (1) you want the additional (not automatic) 3-month extension or (2) you file Forms 990-BL, 6069, or 8870, group returns, or a composite or consolidated Form 990-T. Instead, you must submit the fully completed and signed page 2 (Part II) of Form 8868. For more details on the electronic filing of this form, visit www.irs.gov/efile and click on e-file for Charities & Nonprofits.

6	Did the organization maintain any donor advised funds or any similar funds or accounts where donors have the right to provide advice on the distribution or investment of amounts in such funds or accounts? If "Yes," complete Schedule D, Part I		X
7	Did the organization receive or hold a conservation easement, including easements to preserve open space, the environment, historic land areas, or historic structures? If "Yes," complete Schedule D, Part II		X
8	Did the organization maintain collections of works of art, historical treasures, or other similar assets? If "Yes," complete Schedule D, Part III		X
9	Did the organization report an amount in Part X, line 21; serve as a custodian for amounts not listed in Part X; or provide credit counseling, debt management, credit repair, or debt negotiation services? If "Yes," complete Schedule D, Part IV		X
10	Did the organization, directly or through a related organization, hold assets in term, permanent, or quasi-endowments? If "Yes," complete Schedule D, Part V		X
11	Is the organization's answer to any of the following questions "Yes"? If so, complete Schedule D, Parts VI, VII, VIII, IX, or X as applicable		X
	• Did the organization report an amount for land, buildings, and equipment in Part X, line 10? If "Yes," complete Schedule D, Part VI.		
	• Did the organization report an amount for investments - other securities in Part X, line 12 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part VII.		
	• Did the organization report an amount for investments - program related in Part X, line 13 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part VIII.		
	• Did the organization report an amount for other assets in Part X, line 15 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part IX.		
	• Did the organization report an amount for other liabilities in Part X, line 25? If "Yes," complete Schedule D, Part X.		
	• Did the organization's separate or consolidated financial statements for the tax year include a footnote that addresses the organization's liability for uncertain tax positions under FIN 48? If "Yes," complete Schedule D, Part X.		
12	Did the organization obtain separate, independent audited financial statements for the tax year? If "Yes," complete Schedule D, Parts XI, XII, and XIII.		X
12A	Was the organization included in consolidated, independent audited financial statements for the tax year? If "Yes," completing Schedule D, Parts XI, XII, and XIII is optional	12A	X
13	Is the organization a school described in section 170(b)(1)(A)(ii)? If "Yes," complete Schedule E		X
14a	Did the organization maintain an office, employees, or agents outside of the United States?		X
14b	Did the organization have aggregate revenues or expenses of more than \$10,000 from grantmaking, fundraising, business, and program service activities outside the United States? If "Yes," complete Schedule F, Part I		X
15	Did the organization report on Part IX, column (A), line 3, more than \$5,000 of grants or assistance to any organization or entity located outside the United States? If "Yes," complete Schedule F, Part II		X
16	Did the organization report on Part IX, column (A), line 3, more than \$5,000 of aggregate grants or assistance to individuals located outside the United States? If "Yes," complete Schedule F, Part III		X
17	Did the organization report a total of more than \$15,000 of expenses for professional fundraising services on Part IX, column (A), lines 6 and 11e? If "Yes," complete Schedule G, Part I		X
18	Did the organization report more than \$15,000 total of fundraising event gross income and contributions on Part VIII, lines 1c and 8a? If "Yes," complete Schedule G, Part II		X
19	Did the organization report more than \$15,000 of gross income from gaming activities on Part VIII, line 9a? If "Yes," complete Schedule G, Part III		X
20	Did the organization operate one or more hospitals? If "Yes," complete Schedule H		X

Part IV Checklist of Required Schedules (continued)

	Yes	No
21 Did the organization report more than \$5,000 of grants and other assistance to governments and organizations in the United States on Part IX, column (A), line 1? If "Yes," complete Schedule I, Parts I and II		X
22 Did the organization report more than \$5,000 of grants and other assistance to individuals in the United States on Part IX, column (A), line 2? If "Yes," complete Schedule I, Parts I and III		X
23 Did the organization answer "Yes" to Part VII, Section A, line 3, 4, or 5 about compensation of the organization's current and former officers, directors, trustees, key employees, and highest compensated employees? If "Yes," complete Schedule J	X	
24a Did the organization have a tax-exempt bond issue with an outstanding principal amount of more than \$100,000 as of the last day of the year, that was issued after December 31, 2002? If "Yes," answer lines 24b through 24d and complete Schedule K. If "No," go to line 25		X
b Did the organization invest any proceeds of tax-exempt bonds beyond a temporary period exception?		
c Did the organization maintain an escrow account other than a refunding escrow at any time during the year to defease any tax-exempt bonds?		
d Did the organization act as an "on behalf of" issuer for bonds outstanding at any time during the year?		
25a Section 501(c)(3) and 501(c)(4) organizations. Did the organization engage in an excess benefit transaction with a disqualified person during the year? If "Yes," complete Schedule L, Part I		
b Is the organization aware that it engaged in an excess benefit transaction with a disqualified person in a prior year, and that the transaction has not been reported on any of the organization's prior Forms 990 or 990-EZ? If "Yes," complete Schedule L, Part I		
26 Was a loan to or by a current or former officer, director, trustee, key employee, highly compensated employee, or disqualified person outstanding as of the end of the organization's tax year? If "Yes," complete Schedule L, Part II		X
27 Did the organization provide a grant or other assistance to an officer, director, trustee, key employee, substantial contributor, or a grant selection committee member, or to a person related to such an individual? If "Yes," complete Schedule L, Part III		X
28 Was the organization a party to a business transaction with one of the following parties, (see Schedule L, Part IV instructions for applicable filing thresholds, conditions, and exceptions):		
a A current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
b A family member of a current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
c An entity of which a current or former officer, director, trustee, or key employee of the organization (or a family member) was an officer, director, trustee, or direct or indirect owner? If "Yes," complete Schedule L, Part IV		X
29 Did the organization receive more than \$25,000 in non-cash contributions? If "Yes," complete Schedule M		X
30 Did the organization receive contributions of art, historical treasures, or other similar assets, or qualified conservation contributions? If "Yes," complete Schedule M		X
31 Did the organization liquidate, terminate, or dissolve and cease operations? If "Yes," complete Schedule N, Part I		X
32 Did the organization sell, exchange, dispose of, or transfer more than 25% of its net assets? If "Yes," complete Schedule N, Part II		X
33 Did the organization own 100% of an entity disregarded as separate from the organization under Regulations sections 301.7701-2 and 301.7701-3? If "Yes," complete Schedule R, Part I		X
34 Was the organization related to any tax-exempt or taxable entity? If "Yes," complete Schedule R, Parts II, III, IV, and V, line 1		X
35 Is any related organization a controlled entity within the meaning of section 512(b)(13)? If "Yes," complete Schedule R, Part V, line 2		X
36 Section 501(c)(3) organizations. Did the organization make any transfers to an exempt non-charitable related organization? If "Yes," complete Schedule R, Part V, line 2		
37 Did the organization conduct more than 5% of its activities through an entity that is not a related organization and that is treated as a partnership for federal income tax purposes? If "Yes," complete Schedule R, Part VI		X
38 Did the organization complete Schedule O and provide explanations in Schedule O for Part VI, lines 11 and 19? Note. All Form 990 filers are required to complete Schedule O.	X	

Part V Statements Regarding Other IRS Filings and Tax Compliance

		Yes	No
1a	Enter the number reported in Box 3 of Form 1096, Annual Summary and Transmittal of U.S. Information Returns. Enter -0- if not applicable		
	1a	3	
b	Enter the number of Forms W-2G included in line 1a. Enter -0- if not applicable		
	1b	0	
c	Did the organization comply with backup withholding rules for reportable payments to vendors and reportable gaming (gambling) winnings to prize winners?	X	
	1c		
2a	Enter the number of employees reported on Form W-3, Transmittal of Wage and Tax Statements, filed for the calendar year ending with or within the year covered by this return		
	2a	0	
b	If at least one is reported on line 2a, did the organization file all required federal employment tax returns? Note: If the sum of lines 1a and 2a is greater than 250, you may be required to e-file this return. (see Instructions)		
	2b		
3a	Did the organization have unrelated business gross income of \$1,000 or more during the year covered by this return?		X
	3a		
b	If "Yes," has it filed a Form 990-T for this year? If "No," provide an explanation in Schedule O		
	3b		
4a	At any time during the calendar year, did the organization have an interest in, or a signature or other authority over, a financial account in a foreign country (such as a bank account, securities account, or other financial account)?		X
	4a		
b	If "Yes," enter the name of the foreign country: See the instructions for exceptions and filing requirements for Form TD F 90-22.1, Report of Foreign Bank and Financial Accounts.		
5a	Was the organization a party to a prohibited tax shelter transaction at any time during the tax year?		X
	5a		
b	Did any taxable party notify the organization that it was or is a party to a prohibited tax shelter transaction?		X
	5b		
c	If "Yes," to line 5a or 5b, did the organization file Form 8886-T, Disclosure by Tax-Exempt Entity Regarding Prohibited Tax Shelter Transaction?		
	5c		
6a	Does the organization have annual gross receipts that are normally greater than \$100,000, and did the organization solicit any contributions that were not tax deductible?		X
	6a		
b	If "Yes," did the organization include with every solicitation an express statement that such contributions or gifts were not tax deductible?		
	6b		
7 Organizations that may receive deductible contributions under section 170(c).			
a	Did the organization receive a payment in excess of \$75 made partly as a contribution and partly for goods and services provided to the payor?		
	7a		
b	If "Yes," did the organization notify the donor of the value of the goods or services provided?		
	7b		
c	Did the organization sell, exchange, or otherwise dispose of tangible personal property for which it was required to file Form 8282?		
	7c		
d	If "Yes," indicate the number of Forms 8282 filed during the year		
	7d		
e	Did the organization, during the year, receive any funds, directly or indirectly, to pay premiums on a personal benefit contract?		
	7e		
f	Did the organization, during the year, pay premiums, directly or indirectly, on a personal benefit contract?		
	7f		
g	For all contributions of qualified intellectual property, did the organization file Form 8899 as required?		
	7g		
h	For contributions of cars, boats, airplanes, and other vehicles, did the organization file a Form 1098-C as required?		
	7h		
8 Sponsoring organizations maintaining donor advised funds and section 509(a)(3) supporting organizations. Did the supporting organization, or a donor advised fund maintained by a sponsoring organization, have excess business holdings at any time during the year?			
	8		
9 Sponsoring organizations maintaining donor advised funds.			
a	Did the organization make any taxable distributions under section 4966?		
	9a		
b	Did the organization make a distribution to a donor, donor advisor, or related person?		
	9b		
10 Section 501(c)(7) organizations. Enter:			
a	Initiation fees and capital contributions included on Part VIII, line 12		
	10a		
b	Gross receipts, included on Form 990, Part VIII, line 12, for public use of club facilities		
	10b		
11 Section 501(c)(12) organizations. Enter:			
a	Gross income from members or shareholders		
	11a		
b	Gross income from other sources (Do not net amounts due or paid to other sources against amounts due or received from them.)		
	11b		
12a Section 4947(a)(1) non-exempt charitable trusts. Is the organization filing Form 990 in lieu of Form 1041?			
	12a		
b	If "Yes," enter the amount of tax-exempt interest received or accrued during the year		
	12b

Part III Questions Regarding Compensation

1a Check the appropriate box(es) if the organization provided any of the following to or for a person listed in Form 990, Part VII, Section A, line 1a. Complete Part III to provide any relevant information regarding these items.

- | | |
|--|--|
| <input type="checkbox"/> First-class or charter travel | <input type="checkbox"/> Housing allowance or residence for personal use |
| <input type="checkbox"/> Travel for companions | <input type="checkbox"/> Payments for business use of personal residence |
| <input type="checkbox"/> Tax indemnification and gross-up payments | <input type="checkbox"/> Health or social club dues or initiation fees |
| <input type="checkbox"/> Discretionary spending account | <input type="checkbox"/> Personal services (e.g., maid, chauffeur, chef) |

b If any of the boxes on line 1a are checked, did the organization follow a written policy regarding payment or reimbursement or provision of all of the expenses described above? If "No," complete Part III to explain

2 Did the organization require substantiation prior to reimbursing or allowing expenses incurred by all officers, directors, trustees, and the CEO/Executive Director, regarding the items checked in line 1a?

3 Indicate which, if any, of the following the organization uses to establish the compensation of the organization's CEO/Executive Director. Check all that apply.

- | | |
|--|--|
| <input type="checkbox"/> Compensation committee | <input type="checkbox"/> Written employment contract |
| <input type="checkbox"/> Independent compensation consultant | <input type="checkbox"/> Compensation survey or study |
| <input type="checkbox"/> Form 990 of other organizations | <input type="checkbox"/> Approval by the board or compensation committee |

4 During the year, did any person listed in Form 990, Part VII, Section A, line 1a, with respect to the filing organization or a related organization:

- | | | | |
|---|----|--|---|
| a Receive a severance payment or change-of-control payment? | 4a | | X |
| b Participate in, or receive payment from, a supplemental nonqualified retirement plan? | 4b | | X |
| c Participate in, or receive payment from, an equity-based compensation arrangement? | 4c | | X |
- If "Yes" to any of lines 4a-c, list the persons and provide the applicable amounts for each item in Part III.

Only section 501(c)(3) and 501(c)(4) organizations must complete lines 5-9.

5 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the revenues of:

- | | | | |
|-----------------------------|----|--|--|
| a The organization? | 5a | | |
| b Any related organization? | 5b | | |
- If "Yes" to line 5a or 5b, describe in Part III.

6 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the net earnings of:

- | | | | |
|-----------------------------|----|--|--|
| a The organization? | 6a | | |
| b Any related organization? | 6b | | |
- If "Yes" to line 6a or 6b, describe in Part III.

7 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization provide any non-fixed payments not described in lines 5 and 6? If "Yes," describe in Part III

8 Were any amounts reported in Form 990, Part VII, paid or accrued pursuant to a contract that was subject to the initial contract exception described in Regs. section 53.4958-4(a)(3)? If "Yes," describe in Part III

9 If "Yes" to line 8, did the organization also follow the rebuttable presumption procedure described in Regulations section 53.4958-6(c)?

Date

Dear _____:

This letter is intended to bring your attention to the issue of the proper disposal of end-of-use mercury-containing thermostats. As you may be aware, many older thermostats contain on average 3 grams of mercury and it is important that at the end-of-use these thermostats are properly disposed of to prevent release of mercury into the environment.

In fact, many states regulate the disposal of mercury-containing products and several go further requiring contractors to assume responsibility for the proper disposal of mercury-containing thermostats.

Fortunately, the proper end-of-life management of mercury thermostats is easy. Voluntarily founded by manufacturers, the Thermostat Recycling Corporation provides an easy and affordable way for contractors to properly dispose of mercury-containing thermostats. TRC has collection locations in 47 states that accept end-of-use thermostats at no charge. TRC absorbs all costs related to shipping, handling, and processing of the waste thermostats. To date, TRC has collected and recycled over 4 tons of mercury and nearly 1 million thermostats.

It is our understanding that many state energy programs are promoting the use of electronic programmable thermostats. We strongly encourage you to incorporate thermostat recycling into your programs. Additionally, adding a link to TRC's website from your own may encourage participation in the program.

To learn more about TRC and how it can support thermostat recycling in your state, please refer to the attached fact sheet that we've included with this letter. Also, you may visit our website at www.thermostat-recycle.org. To contact TRC directly, email Mark.Tibbets@nema.org or call 703-841-3246.

Sincere Regards,

Mark Tibbets
Executive Director
Thermostat Recycling Corporation

August 2010

Michael R. Peevey, President
California Public Utilities Commission
505 Van Ness Avenue
San Francisco, CA 94102

RE: Introduction to the Thermostat Recycling Corporation

Dear Commissioner Peevey:

The National Electrical Manufacturers Association (NEMA) is the primary trade association representing the interests of the US electrical products industry. Our 430 member companies supply the full spectrum of products used worldwide in the generation, transmission, distribution, control, and end-use of electricity.

In 1998, three NEMA member companies – Honeywell, White-Rodgers, and GE – voluntarily established the Thermostat Recycling Corporation (TRC), a nationwide non-profit designed to facilitate recycling of mercury-added thermostats. The TRC now has 29 corporate members and is the only national program of its kind in the US (see www.thermostat-recycle.org).

I am writing to introduce you to the TRC and its vital role in ensuring that heating, ventilation & air conditioning (HVAC) contractors and demolition workers who remove out-of-service mercury thermostats dispose of them in accordance with California law. The Mercury Thermostat Collection Act of 2008,¹ enacted with the support of Honeywell, the largest corporate member of the TRC, established a regulatory framework for the program aimed at increasing its effectiveness in the state. A key provision of this law is a *legal obligation* on HVAC contractors, the parties who handle end-of-life thermostats most frequently, to ensure they do not enter the solid waste stream (see Sec. 25214.8.15).

This requirement is particularly important for contractors implementing utility energy efficiency programs that involve the replacement of old thermostats with new demand response or smart grid enabled devices. Once a mercury thermostat is removed from service, under California law that thermostat can never be re-installed and must be taken by the contractor to a recycling location. Fortunately, the TRC program provides the means for contractors to meet this requirement.

I encourage you to familiarize yourself with this industry-funded and operated program, and to share this information with relevant CPUC offices and staff. The program is convenient, accessible, and virtually cost-free to participants and we are committed to working with state officials to ensure its continued success in California. If you have questions or would like additional information, please do not hesitate to contact me at 703-841-3249 or mar_kohorst@nema.org.

Very truly yours,

A handwritten signature in black ink, appearing to read "Mark A. Kohorst".

Mark A. Kohorst
Senior Manager, Environment Health & Safety

¹ Chaptered as article 10.2.2., chapter 6.5 of Division 20 of the California Health and Safety Code, relating to hazardous waste.

Subject: Information on CA mercury thermostat Act
Attachments: CA CSLB Blurp.doc

Venus,

You may recall we spoke about a week ago regarding the CA Mercury Thermostat Act. As promised attached is a short article for CSLB's newsletter. The article summarizes CA contractors' legal obligations under the Act and how simple it is to comply with the law by taking advantage of the manufacturers' take-back program.

If you have any questions, or need additional information please do not hesitate to contact me.

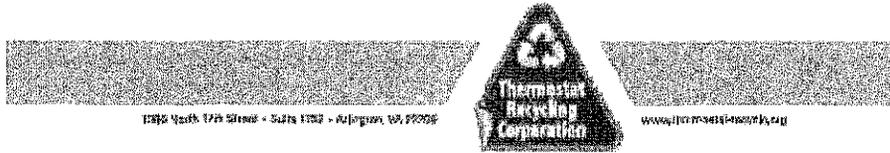

We deeply appreciate your assistance in getting the word out to CA contractors.

Regards,

Mark Tibbetts
Executive Director
Thermostat Recycling Corporation

Appendix N: Correspondence to American Supply Association

September 13, 2010

Mr. Michael Adelizzi
Executive Vice President
American Supply Association
222 Merchandise Mart, Suite 1400
Chicago, IL 60654

Subject: Legal Mandate in Nine States for HVAC Wholesale Distributors to Collect Waste Mercury Thermostats

Dear Mr. Adelizzi:

Thermostat Recycling Corporation (TRC) requests your assistance in informing your members about their legal obligations in several states to collect waste mercury thermostats.

As you maybe aware, many older thermostats contain between three and twelve grams of mercury. While safe when in use, these thermostats may pose a risk to human health and the environment when discarded in solid waste.

In an attempt to increase the number of thermostats diverted from solid waste, several states have passed laws relating to the collection and disposal of waste mercury thermostats. Currently seven states (California, Iowa, Maine, Missouri, New Hampshire, Pennsylvania, and Vermont) require wholesale distributors of HVAC equipment to act as a collection point for waste mercury-containing thermostats. Two additional states (Illinois and Rhode Island) begin mandating collections in 2011.

Fortunately, for wholesale distributors who currently are not collecting mercury thermostats, a simple and low-cost collection/recycling program that satisfies most state legal obligations exists. Manufacturers of mercury-containing thermostats started the non-profit Thermostat Recycling Corporation in 1997 to facilitate the collection of all brands of mercury-containing thermostats.

For a modest one-time fee (currently \$25 per collection container), TRC provides a sturdy plastic collection container, pre-paid shipping label, and educational materials to collection points. TRC assumes all on-going costs for shipping and processing of the thermostats. All that TRC requires is that collection locations only ship whole mercury-containing thermostats (no other mercury-containing products) with their covers, return the container at least once a year, and assistance in promoting the program.

1300 North 17th Street · Suite 1752 · Arlington, VA 22209

www.thermostat-recycle.org

April 1, 2012

VIA EMAIL

Ms. Debbie Raphael, Director
Department of Toxic Substances Control
10001 I Street
Sacramento, CA 95814

Subject: Thermostat Recycling Corporation's 2011 Annual Report for California

Dear Ms. Raphael:

Attached is TRC's annual collection report for calendar year 2011. TRC has made its best effort to provide a comprehensive report on its efforts to promote the collection program in California and improve the program's environmental outcomes. A copy of this report may be found on TRC's website at: <http://www.thermostat-recycle.org/media/index>.

While results are encouraging, much work remains. The program built upon 2010's growth and increased the number of thermostats recovered from California collection locations by nearly 50%.

TRC continues to aggressively market its program in California and the attached report describes a number of modifications to the program in an effort to increase the number of mercury switch thermostats recovered from California in 2012.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", with a long horizontal flourish extending to the right.

Mark Tibbetts
Executive Director

Cc: TRC Member Representatives

Total Thermostats			19,927

From California collection locations TRC recovered 255.84 pounds of mercury from 18,697 intact mercury thermostats and 2,534 mercury switches removed from thermostats.

Based upon 2011 returns, TRC estimates there are 2.05 switches per thermostat recovered from California. The 2,534 switches likely represent an additional 1,230 thermostats.

TRC recovered 16,529 thermostats from HVAC wholesale distributor collection locations, 1,403 from HVAC contractors and 765 from HHW locations in California. TRC received no thermostats from California retail locations in 2011.

Waste Mercury-Added Thermostat Management

Bins with waste mercury-switch thermostats are received at the fulfillment/processing center in Golden Valley, Minnesota. The facility is owned and operated by Honeywell International under contract with TRC.

Bins are received at the loading dock and sent to the TRC processing area. The bin and plastic liner are opened and the contents are identified, sorted,

and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and

mercury switches by manufacturer and any non-conforming material. The bin is returned to the location that sent it in with a new pre-paid address label within 72 hours of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The containers are returned from the storage area to the TRC processing area to have the mercury switches removed from the plastic housing. Universal Waste Regulations require the disposal of waste within 12 months of generation. TRC's processor requires that the disposal occur within 6 months of generation and TRC follows the more stringent requirement. Small quantities of thermostats are removed from the container, which is then closed again, and placed at the switch removal workstation on a tray that contains any potential mercury spillage. The switches are removed from the thermostats and placed into a 2 quart container at the work station. In the event that a switch breaks and mercury spills the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. TRC processing area is equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

The 2 quart container is emptied into a special 55 gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are drawn away and vented when the drum is opened.

The 55 gallon drum is then shipped to Bethlehem Apparatus Corporation in Hellertown, Pennsylvania for final processing of the mercury switches. Bethlehem Apparatus meets or exceeds all local, state, federal regulations for the management of the product. Bethlehem's approvals for mercury recovery/recycling include:

- EPA - identification No. PAD002390961 (Bethlehem Apparatus Co., Inc.)
- EPA BDAT Requirement - satisfied by all recovery operations
- CERCLA (Comprehensive Environmental Response Compensation and Liability Act)
- Pennsylvania Department of Environmental Protection

The facilities' processing follows all EPA guidelines and regulations. TRC has a facility license from Hennepin County Minnesota for the operation of the TRC. Honeywell, Inc. has a Hazardous Waste Generator license from Hennepin County. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

Program Education and Outreach

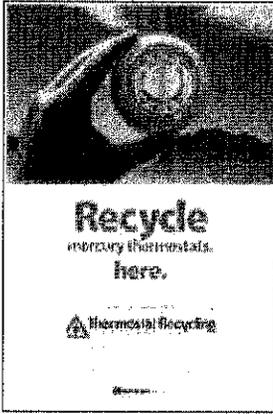

TRC marketing and promotion efforts targeted key audiences in California. TRC's objectives are to raise awareness of California's mercury thermostat law and to encourage the recycling of waste mercury thermostats. Below is a summary of many of the activities and the channels TRC utilized to support of this effort.

Development of Written Materials and Signage for Collection Points and Key stakeholders—TRC maintains on its website (www.thermostat-recycle.org) a Promotional

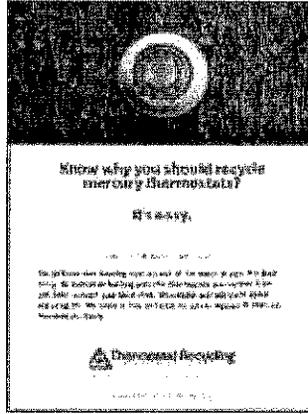

Toolkit which contains templates of a number of items for collection points to download and reproduce. In 2011 TRC added **three new** items to the toolkit. The new items include two posters and two versions of a point-of-sale card.

Exhibit 1: Examples of Toolkit Items

Poster

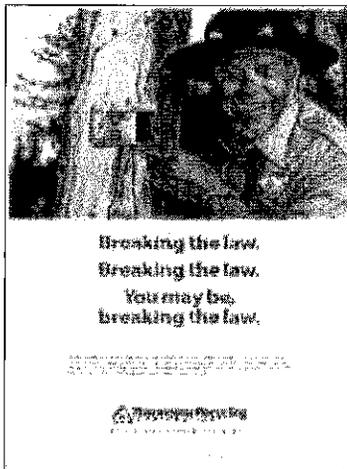

Advertisement

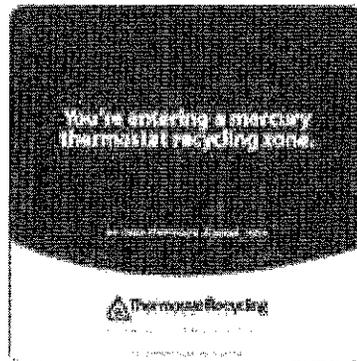

In addition to the templates on TRC's website, TRC placed the new window cling (ideal for the entrances of collection locations) into inventory along with the two new 11 x 17 posters and a postcard. TRC provided the cling and a copy of the "law" poster (or previous versions) to all California locations that ordered a new or additional bin in 2011. TRC actively promotes the availability of these items and will provide these materials to any participating collection location or HVAC contractor. These items are also distributed at trade shows. Finally, TRC provided copies of these materials to DTSC staff in support of the Department's educational efforts.

Exhibit 2: Examples of New Print Collateral

Poster (law version)

Window Cling

Wholesaler Recruitment/Engagement—All HVAC wholesale distributors with physical locations in California are required to act as a collection point for waste mercury thermostats and promote the availability of thermostat recycling at their location(s).

In an effort to increase the level of participation among California distributors TRC employed the following tactics:

- Direct engagement: TRC determined the most efficient and effective means of engaging distributors is not at the branch location level. TRC staff specifically targeted decision makers of distributors with multiple California locations in 2011. The primary message was it is the law and the Department is taking steps to enforce. TRC used industry meetings, member contacts, and other tactics to identify and contact decision makers at distributors.
- Creating competitive pressure: The distribution business is highly competitive and TRC used that to engage competitors. Marketing and media efforts highlighted certain distributors' participation in an effort to engage their competitors. Placing the logos of distributors on TRC's website is one of the best examples of this effort.
- Pushing contractors to collection locations: Paid and earned media emphasized to contractors to ask their distributors to collect; if distributors' customers request the service it is more likely they will offer it.

The following summarizes a few key projects conducted in 2011 targeting distributors.

- In partnership with Heating Airconditioning Refrigeration Distributors International (HARDI), TRC launched the inaugural *Mercury Thermostat Recycling Awards* in **May**. The awards were intended to incent participation in the program by recognizing the distributor(s) that recovered the most mercury thermostats and/or developed innovative strategies to promote the program at its location(s). The program was widely promoted by HARDI to its members and within the industry trade press. TRC also developed custom promotional materials for HARDI members and templates of those materials are available on TRC's website. The awards were presented at HARDI's annual meeting in **October**. California distributors **USACD** and **Baker Distributing** were among the winners.
- TRC placed a 5x7 full-color insert in *HVACR Business* magazine (for greater detail see the advertising section below). TRC included the logos of several California distributors that have supported the program beyond the minimums in the law. California distributors **USACD**, **Baker Distributing**, **Goodman Distribution**, and **RE Michel** provided art to TRC.
- Following the Department's recommendation that TRC "pull" bins from collection locations, TRC sent correspondence (see Appendix A and B) to all California collection locations in **July** that had 1) never returned the bin or 2) had not returned the bin within the last 12 months.¹ TRC included a copy of its window cling sticker in the mailing to promote the availability of materials to participating collection locations.
- TRC added a scrolling bar with the logo of "collection partners" to its website. Several California distributors agreed to provide art to TRC.

¹ The impact of the mailing was significant as evidenced by the spike in returns in August.

Retailer Engagement— TRC continued to encourage large national retailers to participate in the program. During the implementation of San Louis Obispo County’s retail ordinance, TRC again availed the program to large retailers.

Summary of Additional Education and Outreach by Channel

TRC conducted an array of activities intended to raise awareness of California’s mercury thermostat disposal ban, mandatory HVAC contractor recycling, and the ease of compliance through TRC’s collection program.

Website—TRC’s maintains www.thermostat-recycle.org. The website contains participation forms, the previously mentioned outreach toolkit, safety and shipping information, media releases, and reports. The website includes a location search utility that provides for an easy search by zip-code of locations that have ordered TRC collection containers. TRC also promotes its national collection partners by scrolling their corporate logos on the homepage. In **September** TRC completed a *search engine optimization* (SEO) of its website. The objective of the SEO was to increase website traffic by making TRC easier to find on the internet. For instance if a person searches on the term “mercury thermostat recycling” or “thermostat recycling” the first search result in Google is TRC’s website. The optimization nearly doubled TRC’s monthly website traffic and also markedly shifted the manner in which the site is found, as a higher percentage are now finding TRC through “organic search.”

Earned Media— TRC generated considerable positive media attention in 2011. TRC made a concerted effort in 2011 to generate stories on the program. Most notable was the four-page article in *The Air Conditioning, Heating, and Refrigeration News (The News)* which included a TRC provided table on mercury thermostat laws. *The News* is one of the leading industry publications.

The National Demolition Association (NDA) also ran a multi-page article authored by TRC’s executive director on the proper management of mercury containing products found in residential and commercial structures in the **June/July** issue of *Demolition Magazine*. Select reprints of

Paid Advertising

ACCA Sponsorship—TRC sponsored the Air Conditioning Contractors of America (ACCA) 2011 Contracting Week in Nashville, Tennessee, **October** 18-21. The sponsorship included TRC's logo on attendee bags, the inclusion of TRC promotional materials in the bag, and TRC's logo on ACCA's website and signage at the event.

Trade channel web-based advertising— TRC developed new rotating banner advertisements and ran them (Exhibit 3) on the websites contractingbusiness.com (160x600 skyscraper) and hvac-talk.com (300x250 medium rectangle) during the months of **April, May, September and October**. Together, the websites average 1.8 million pages views and 280,000 unique visitors per month. HVAC-Talk.com, an online discussion community, boasts 122,000 registered users.

TRC strategically placed ads to coincide with the spring and fall HVAC business cycles. While the ads were featured, 701,528 impressions were delivered and 522 clicks on the advertisements were recorded. In September and October, clicks from HVAC-Talk.com ads accounted for 3% of TRC's website traffic.

Exhibit 3: Web Banner Advertisement (300 x 250 version)

Facebook and Google— TRC developed and deployed a Social Media strategy that leveraged the power of Google and the popularity of Facebook. The campaign, which ran from **September** through **December**, geo-targeted contractors and consumers in California and other states with mercury thermostat disposal bans in an effort to create awareness and increase thermostat collections.

Ads (See Exhibit 4) were developed with variable messages targeting both audiences. Advertisements appeared on Google search results pages after an individual searched terms related to TRC's mission (E.g. thermostat replacement, contracting recycling regulations, mercury thermostat recycling, programmable thermostats, etc.). Similarly, the Facebook

campaign targeted users over 18 who "like" industry-relevant topics or organizations (i.e. renovating, renovators, HVAC, HVAC Technicians, home repair, etc.)

The campaign resulted in over **340,000 impressions** on Google and **8.1 million impressions** on Facebook.

Exhibit 4: Examples of Google and Facebook Advertisements

thermostat-recycle.org

Mercury thermostats?

Replace the thermostat. Recycle the thermostat. It's that simple.

Tip-In Insert in HVAC Trade Press—TRC placed a 5x7 color insert in the **April** and **October** issues of *HVACR Business* (see Exhibit 5). The insert was included in issues received by approximately 12,000 subscribers in states with mercury thermostat disposal bans (including California). This enabled TRC to incorporate the message, “It’s something you gotta do, because it’s the law.”

Exhibit 5: HVACR Business Insert

Fact 1:
Recycling mercury thermostats is easy.

Fact 2:
Recycling is good for business—because the mercury isn't in the thermostat.

Fact 3:
It's something you gotta do, because it's the law.

Additionally, as mentioned previously, TRC incorporated the logos of larger HVAC wholesale distributors on the backside of the card enabling contractors to quickly identify collection locations.

And we're the ones who make it easy.

The Green Star Range is the only one in the world that's been designed to be recycled. It's the only one that's been designed to be recycled. It's the only one that's been designed to be recycled.

In New York, there's a law that says you have to recycle your old thermostat. And that's why we're here. We're here to help you recycle your old thermostat. We're here to help you recycle your old thermostat.

For more information, visit www.thermostat-recycling.org.

2011 IHACI Summer Energy Savings Guide, *Los Angeles Daily News*—TRC ran a full-page color advertisement in the guide (Exhibit 6). The guide reached over 400,000 readers of the *Daily News* and featured editorial and emphasis on quality installation practices, utility programs, and energy savings.

Exhibit 6: *LA Daily News* Advertisement

1. Save energy
2. Protect the environment

Two very good reasons why it may be time to replace your mercury thermostat.

Round, square, rectangular. Thermostats come in many shapes and sizes. And if the one you have has a lever or a dial and is more than 10 years old, it's time for an upgrade. Newer programmable thermostats can help you save energy and won't contain mercury.

And if you or your contractor replaces a thermostat that contains mercury, recycle it. Not only is it a good idea, it's California law. Go to thermostat-recycle.org to find out who in your area collects and recycles old thermostats.

 **Thermostat Recycling**
CORPORATION

an industry-funded non-profit

Indoor Comfort News Advertising—TRC placed a quarter-page advertisement in the April, August, and November issues. *Indoor Comfort News (ICN)* has been published by the Institute of Heating and Air Conditioning Industries, Inc. (IHACI) since 1955 as a tool for attaining the trade association's goal of educating and promoting HVACR industry. *ICN's* audience includes

contractors, distributors, and manufacturers. Total circulation is 25,000 with a readership estimated over 100,000. **California circulation is approximately 17,000.**

Exhibit 7: ICN Advertisement

(customers like environmentally friendly businesses)

Fact 3:
It's something you gotta do,
because it's the law.

www.thermostat-recycle.org

**The Recycling of Air Conditioning Thermostats is regulated by Title 26 of the California Code of Regulations and is prohibited by California Public Resources Code, Section 45010.

Tradeshows—TRC attended and exhibited at the following trade shows:

January 31-February 2: AHRExpo. Las Vegas. AHRExpo is the largest national trade show for the HVACR industry. TRC staff exhibited and promoted the program to HVAC contractors, manufacturers and distributors. The show had a total registered attendance of over 53,000.

February 15–17: Air Conditioning Contractors of America Indoor Air Expo, San Antonio, Texas. Representatives from over 200 HVAC contracting businesses attended the show.

March 1: Plumbing, Heating Cooling Contractors of Greater Los Angeles, California. The “Flow Expo” was held at the Long Beach Convention Center and was attended by over 5,000 industry professionals.

May 22-26: Oil and Energy Service Professionals. Hershey, PA. This was OESP’s annual convention and trade show. Nearly 2,700 HVAC professionals attended this show, which targeted service managers for HVAC firms that install and repair oil fired furnaces. TRC sponsored this event and its logo was displayed on event signage and website.

September 27-29: North American Hazardous Materials Management Association (NAHMMA), Portland, Oregon. This was NAHMMA’s annual meeting. TRC exhibited and co-presented with a HARDI representative.

October 23-26: Heating Airconditioning and Refrigeration Distributors International (HARDI). Maui, Hawaii. TRC exhibited and participated in the “Booth Program,” which provides for 1-on-1 sessions with senior executive staff from HARDI member companies. This event targeted representatives of approximately 80% of the wholesale market for HVACR products. TRC also presented the inaugural Thermostat Recycling Award to three HVACR distributors recognizing their support of the program.

November 16: Institute of Heating and Air Conditioning Industries, Inc. (IHACI) **Pasadena, California.** IHACI’s trade show is attended by over 5,000 HVAC professionals; this show is the largest annual California trade show for the industry.

Public Service Announcement— TRC developed a new 30 second public service announcement in 2011 reflecting changes to the Energy Star program.

California

Did you know that by turning down your thermostat by ten to fifteen degrees for eight hours a day you could save ten percent a year on energy bills? That’s according to The US Department of Energy. Installing a programmable thermostat makes this easy.

But remember many older thermostats contain mercury, and if you replace one, you must recycle it--it’s California law. The good news is there are recycling locations all over the state. Go to thermostat dash recycle dot O R G to know more.

In **August** TRC requested (See Appendix D) radio stations serving the California market air the PSA. TRC monitored the airtime of the PSA through **December**. While the monitoring doesn’t cover all stations within California, it does provide data on the frequency and audience for the PSA, particularly in larger markets.

Exhibit 8: PSA Summary:

Market	Stations	Audience Total
Bakersfield	KRAB, KDFO	5,600
Los Angeles	KFRG	9,300
San Fransco	KLIV	74,400
San Deigo	KGB, KHTS, KIOZ, KMYI, KUSS	268,300
Fresno	KJZN	59,500
	Total	417,100

Stakeholder Outreach— TRC sent correspondence followed by a direct appeal via telephone (See Appendix E) to over **40** California trade groups in **August and September**. TRC targeted the California chapters of **Plumbing Heating Cooling Contractors Association** and **Sheet Metal and Air Conditioning Contractors’ National Association**. TRC sent similar correspondence to the **Northern CA Mechanical Contractors Association** and the

Airconditioning, Refrigeration and Mechanical Contractors Association of Southern California. The California chapters of the **National Association of Residential Property Managers, Building Owners and Managers Association,** and **California Apartment Association** also received correspondence. Attached to the correspondence was a simple media release for use in association publications.

Operational Enhancements

TRC made a number of enhancements to its operations in 2011. Some enhancements include:

- To facilitate compliance with the one-year accumulation regulation and speed bin returns, TRC began including an adhesive label to record the accumulation start date in each container. TRC modified the label on the exterior of the bin to include the admonition to return bin within one year of receipt. TRC also updated instructions provided with every new and returned recycling container to explicitly require locations to record the accumulation start date and return the container within one year that date
- To improve customer service TRC began to directly handle customer service calls at program's HQ and included the new toll-free number and email address on instructions provided in each bin. This toll-free number was also provided in all correspondence to California distributors. The new number and email helpline was added to the footer and contact us page on TRC's website. TRC's goal is to return all calls and emails within one business day. TRC is also maintaining a log of all calls to ensure quality of service and that issues are resolved appropriately and in a timely manner.
- TRC updated the participation forms to capture more information from the collection location at the time the bin is ordered. **TRC is also now accepting orders via email and fax,** in an effort to both ease and speed up the order process. TRC also began explicitly offering to invoice bin fees. TRC found this is particularly helpful to larger distributors ordering multiple bins.
- Implemented a new data management system that provides for timely updates to collection location information on the website. TRC also modified the bin order process. **All orders are now initially processed by TRC staff at the corporate office.** This change results in faster processing of orders and fewer errors in processing and data entry.
- Engaged directly with several wholesale distributors with multiple locations in California to **update location information in the program's location database.** Maintaining accurate listings is an on-going and continual process.
- Updated its compliance assistance effort. As collections have increased, the frequency of bins with non-compliant materials has grown. **A new monitoring system was implemented increasing the frequency of contact to collection locations.** This effort has the additional benefit of pushing collateral to locations and updating location information.

Program Expenses

TRC is a national voluntary program that is also operating nine mandatory programs on behalf of its manufacturer members. As most promotional activities are run concurrently in multiple states, tracking and isolating expenses specifically to California is not possible. Below is a summary of TRC's national program expenses for 2011. A copy of TRC's 2010 IRS Form 990 is attached in the Appendix.

Exhibit 8: 2011 Program Administrative Expenses

TRC Staff and Administration	\$ 255,617
Recycling Costs	\$ 299,877
Insurance	\$ 13,945
Statutory Incentive Payments	\$ 37,860
New Collection Containers	\$ 18,859
Travel	\$ 28,108
Legal	\$ 93,272
Direct Expenses for Marketing & Outreach	\$ 123,221
Total	\$ 870,760

TRC expenses include:

- **TRC Staff and Administration:** Includes staff and consultants, general office expenses, telecommunications, and other administrative expenses. Includes staff labor costs to implement California program.
- **Insurance:** Pollution and liability insurance.
- **Travel:** All travel in 2011 includes travel to trade shows to promote program.
- **Recycling Costs:** All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and data management.
- **New Collection Containers:** Direct cost for new containers ordered in 2011.
- **Marketing/Outreach & Printing:** Includes direct costs to develop and print program collateral; direct mail, national and state advertising, sponsorships, marketing consultants, some web and IT consulting, and other outreach activities. Marketing/Outreach does not include any TRC labor costs.

Comments/Recommendations/Modifications

California's mandatory collection program will shortly be entering its third year of operation. Using 2008 as the base year, the cumulative increase in collections is 167%².

² Comparison uses whole thermostats recovered, actual growth higher if the totals include switches removed from thermostats.

While these results are encouraging, TRC recognizes significant work remains. There are also a number of challenges. Some more significant challenges include:

- Wholesale distributor participation remains problematic. As an example, TRC staff visited approximately 20 wholesale distributor collection locations in the Los Angeles area in **November**. Not surprisingly, several were still not collecting (even if TRC had record of a bin order for that location). Surprisingly, many of the locations not collecting had also been visited by DTSC staff, and were still not collecting. TRC speculates that the issue with wholesaler compliance is not awareness of the law's requirements within the channel, but rather it simply may not be considered a priority by some.

However, in the months following, the perceived threat of enforcement has had an impact. The channel is aware that the Department is conducting inspections and risk of substantial fines for non-compliance is now making this program a priority. Both bin orders and requests for materials spiked in the last several months.

- Maintaining accurate information on collection locations. Staff turnover at distributors is high and location information quickly becomes dated. Additionally, locations rarely inform TRC if they move, close, or lose a bin. If anything occurs, locations simply order a new bin. Moreover, typically after the initial bin order the only contact with the collection location is the return of a full bin. The return address information on the pre-printed label from Federal Express is limited and does not allow us to update contact information such as name or phone number³.
- Contractor and/or technician compliance with the disposal ban remain below desired levels. However, we are certain the level of awareness of California law is high within the channel.
- Compliance with TRC storage and shipping policies. TRC's policies are intended to protect the health and safety of program participants in compliance with state and federal regulations. The return of items other than whole mercury thermostats is a continual issue and as collection rates increase, the amount of time and effort now devoted to compliance assistance is significant.

In response, TRC will among other things make the following modifications to its program in 2012:

- Expand and modify aspects of its marketing efforts to the trade channel in California. TRC will **mail over 32,000** postcards to California HVAC contractors in 2012. TRC is also expanding its advertising buy in *Indoor Comfort News* and will run a full-color 5x7 insert in 3 consecutive issues of the magazine. The buy will reach **17,000 California subscribers per issue**.
- **Test a consumer-facing web-based advertising** campaign in California. Noteworthy, the campaign's primary objective will not target consumers' recycling behavior; rather it will attempt to get consumers to affect their HVAC contractors' behavior.

³ Many locations do not even complete the return label. Additionally, locations may provide a main phone number or it may be a direct line to the staff person that ordered the bin(s).

- Develop a postcard reminder encouraging collection locations to ship TRC collection containers within a year of the accumulation date and contact the program with address changes. **TRC's goal is to "touch" collection locations more frequently** and this is one of several tactics that will be employed and/or tested in 2012.
- TRC's new database and changes to its participation forms and bin order processing will assist in the accuracy of collection location information forms moving forward. However, 10 years of legacy data remains a problem. **Cleaning TRC's database** will be one of several projects for the program's summer intern.
- TRC does not see value in conducting site visits to all, or even a substantial minority of locations. Efforts in other states have merely proven what is known; many are not actively collecting. Site visits have not yielded growth in location participation, as staff at the location generally does not have the authority to order bins. Rather, TRC will continue with its strategy of engaging decision makers at the corporate offices of wholesale distributors. Efforts are underway (dependent on the voluntary participation of the distributor) to engage certain distributors with a significant market presence in California on cooperative marketing efforts. Working with HARDI, TRC is also modifying the Thermostat Recycling Awards program to **incent the active promotion of the program** by collection locations.
- Develop additional collateral to **assist HVAC contractors** in promoting their support of the program and incent their participation.
- **Develop two short training videos.** One will be for use by HVAC training instructors to show prior to HVAC training classes. The other will be for wholesale distributors to train staff on the program and TRC's storage and shipping policies (e.g. compliance with universal waste regulations.)

Appendix A: Sample of Correspondence to HVAC Wholesale Distributor locations in California

[REDACTED]
[REDACTED]
[REDACTED]
SAN JOSE, CA 95112-0000

Dear [REDACTED]

Legislation passed in 2008 requires all HVAC wholesale distributors with facilities in California to act as a collection point for waste mercury-switch thermostats. Thermostat Recycling Corporation thanks you for participating in its program and acting as a collection site for waste mercury thermostats.

According to our records, your location has not returned a bin within the last 12 months. I want to remind you that California universal waste regulations require that wastes such as mercury thermostats be stored for no longer than 12 months from the start date of accumulations. If you have thermostats in the container, please ship it to us promptly. We have included an extra pre-paid shipping label in case you misplaced the one provided with the container. If you have questions about the program, please contact us using the information provided below.

Additionally, TRC recently updated the promotional materials available to collection sites. TRC has both printed cling stickers and posters available at no cost. Templates of materials are available on TRC's website at thermostat-recycle.org. We have included a window cling as an example. Please consider using this collateral as it serves to promote the program while showcasing your business as an environmental steward.

Please feel free to contact me with any questions about the law or TRC's program. Call 888-266-0550 or email us at trc@thermostat-recycle.org

Regards,

Neisha Johnson

SAN DIEGO, CA 92110

COPY

Dear [Redacted name]

Legislation passed in 2008 requires all HVAC wholesale distributors with facilities in California to act as a collection point for waste mercury-switch thermostats. I want to remind you that California universal waste regulations require that wastes such as mercury thermostats be stored for no longer than 12 months from the start date of accumulations.

According to our records, your location received container(s) in order to comply with California law. However, to date, our records indicate we have never received any waste mercury thermostats from this location. It has come to our attention that the California Department of Toxic Substances Control (DTSC) has been conducting inspections of HVAC wholesalers and has begun enforcement of this regulation. If you have thermostats in the container, please ship it to us promptly.

If you no longer have a container or if you need another pre-paid shipping label, please contact Neisha Johnson immediately at 888-266-0550 or by email at trc@thermostat-recycle.org.

Regards,

Mark Tibbetts

ENVIRONMENTAL UPDATE

SAFE HANDLING & DISPOSAL OF MERCURY-CONTAINING THERMOSTATS

Additional Regulations Affect Demolition Industry: Pre-Demolition Removal of Mercury-containing devices from Residential and Commercial Facilities

By **MARK TIBBETTS**
Executive Director
Thermostat Recycling Corporation
Arlington, VA

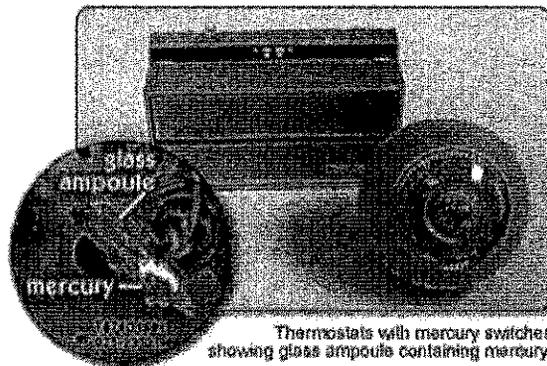

Mercury can be found in various devices in residential and commercial structures. If not managed properly at the end-of-life, these devices can break, releasing mercury into the environment. Prior to demolition, facilities should be inspected and these devices should be removed to ensure proper disposal.

Mercury releases can present a serious environmental and health problem. Inhaling mercury vapors – which are colorless and odorless – can cause irreversible damage to the brain and kidneys. Even very small amounts of mercury (less than a gram) may cause adverse health effects.

The central nervous system, eyes and respiratory system can also be affected by mercury. Developing fetuses and children are the most sensitive to mercury exposure. Inhalation of mercury vapor is the most harmful means of exposure. Mercury can also enter the body through contact with the skin or by swallowing.

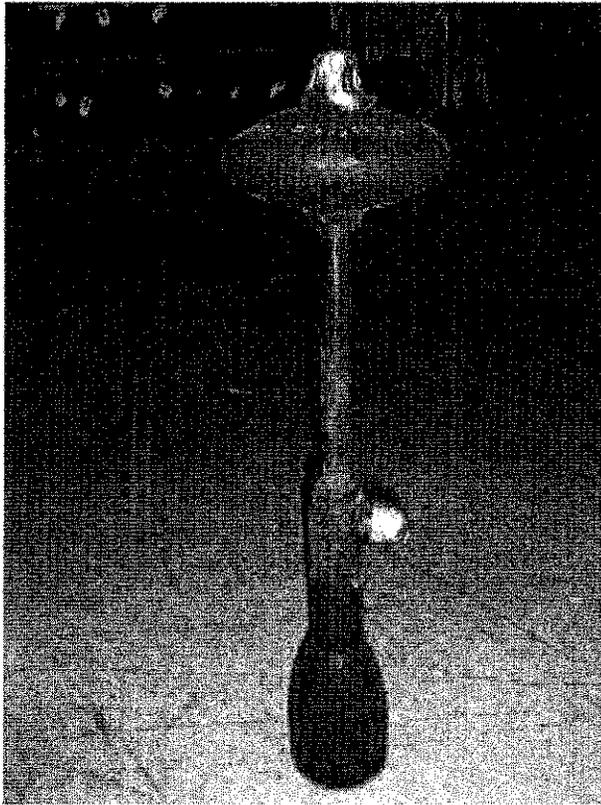

If released, mercury can pose a danger to people if not properly cleaned up and removed. It can easily spread by walking (tracking), sweeping or vacuuming, thereby presenting a potential health threat to others. Tracking throughout a building or into automobiles has spread mercury contamination to many other locations in many instances.

Health impacts will increase over time if the mercury is not properly removed. Mercury vapors are heavier than air and tend to remain near the floor or mercury source, but can get into the ventilation system and be spread throughout a house or business. Indoors, mercury vapors will accumulate in the air. Children five years of age and younger are considered to be particularly sensitive to the effects of mercury on the nervous

Thermostats with mercury switches showing glass ampoules containing mercury.

ENVIRONMENTAL UPDATE

Mercury Seal Generator

system since their central nervous system is still developing. When pregnant women are exposed to mercury, the mercury can pass from the mother's body to the developing fetus; it can also be passed to a nursing infant through breast milk.

CLEANING UP MERCURY SPILLS

If released, clean-up costs are significant. It is not unusual for costs to range from \$5,000 up to \$300,000 for a single incident. Typical response to mercury releases in homes has consisted of relocating the residents and providing temporary housing, gathering visible mercury with a special vacuum, and heating and ventilating the house to drive off the harmful mercury vapors. In some instances, walls, carpeting and floors of houses have had to be removed because they were grossly contaminated. Personal possessions have also been discarded if they became contaminated and the mercury could not be removed. Contaminated materials are likely to be treated as hazardous waste and sent to a special landfill or a mercury retort facility. In a worst case scenario mercury is spread from the original release location into vehicles and other homes via shoes or clothing; spreading contamination and the scope of clean-up.

DEVICES THAT CONTAIN MERCURY

The three most common devices with significant amounts of mercury in them are mercury-switch thermostats, gas pressure regulators, and mercury pressure switches.

Facilities that were built prior to 1968 may have a mercury-containing gas pressure regulator adjacent to the gas meter. Most of these devices were manufactured and installed in the 1940s and 1950s. These devices contain approximately two teaspoons of mercury. Mercury spills have sometimes occurred during improper removal of these devices, causing a potentially significant health risk and resulting in costly cleanups.

Some older boiler heating systems have a mercury seal generator or mercury pressure switch(s). These devices may be found near the boiler or near a radiator on an upper floor. They can contain up to several fluid ounces of mercury. Mercury spills can occur as a result of improper removal of these devices. A spill can require a significant cleanup effort. In April 2011, EPA responded to a mercury spill at a home where an old 1920s boiler had been improperly removed, resulting in a spill of about four fluid ounces of mercury.

The most commonly found mercury-containing devices are mercury-switch thermostats. While it is more likely to find them in residential structures (single and multi-family), mercury-switch thermostats may also be

ENVIRONMENTAL UPDATE

found in commercial and light-industrial facilities. Each thermostat contains up to 12 grams of elemental mercury and is one of the largest remaining reservoirs of mercury in residential buildings today.

LEGAL ISSUES GOVERNING MANAGEMENT

The management of mercury-containing devices is regulated by both state and federal authorities.

The Superfund Law (Section 104 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980 as amended, 42 U.S.C. Sec. 9604) provides the US Environmental Protection Agency (EPA) the legal authority to respond to mercury releases. The Superfund law also gives EPA the authority to identify the party responsible for the release, order those who improperly handle mercury to take appropriate response, and/or compel them to pay for a cleanup.

CERCLA also requires that any release amount above the quantity of one pound – one pound of mercury is approximately two tablespoons – must be reported to the National Response Center.

The Emergency Planning and Community Right-to-Know Act requires that any release of mercury greater than one pound be reported to the local emergency planning committee, state emergency response commission, or local response personnel by the owner/operator.

Disposal of these devices may also be regulated by federal law.

Additionally, many states also regulate the disposal of mercury-containing products. Twelve states specifically ban the disposal of mercury-containing products in solid waste. Additionally, some states, most notably California and Illinois, require demolition contractors to remove and properly manage all mercury-containing thermostats prior to a building's demolition.

PROPER MANAGEMENT

Facilities need to be inspected, and if mercury is present, these devices need to be removed and disposed of properly prior to a building's demolition. In the instance of mercury-containing gas pressure regulators, the removal needs to be coordinated with the gas utility.

In the case of mercury-switch thermostats, they can be managed as a universal waste, reducing costs associated with transport and disposal. In fact, the manufacturers of mercury-switch thermostats established a national program in which assumes all costs associated with the transport and disposal of whole mercury-switch thermostats. For more information on the management of waste mercury thermostats visit www.thermostat-recycle.org. 

Mercury Gas Regulator

Appendix D: PSA cover letter

July 29, 2011

1300/1752

Dear Public Service Director,

The Thermostat Recycling Corporation (TRC) is a not-for-profit organization that facilitates the collection and proper disposal of mercury-containing thermostats. Voluntarily founded by thermostat manufacturers, TRC's mission is to promote the safe collection and proper disposal of mercury-containing thermostats.

Mercury is a potent neurotoxin and by properly disposing mercury thermostats by recycling them is the best means of keeping it from the environment. Many people are replacing their old thermostats to save energy and it is important for them to know that many old thermostats contain mercury and should be recycled.

We would appreciate any support you can give us, within your community, by running this Radio PSA, giving your audience a chance to help protect California's environment.

Thank You for your time and consideration,

A handwritten signature in black ink, appearing to read "Mark Tibbetts".

SUBJECT: IMPORTANT INFORMATION ON CALIFORNIA'S MERCURY THERMOSTAT DISPOSAL ACT

Dear Mr. Schwenk:

This letter is to remind you of a legal obligation in California that affects your members. The Mercury Thermostat Act, which went into effect in 2008, requires HVAC contractors to recycle all mercury-switch thermostats they removed from service. The law prohibits them from leaving them at the customer's premise.

The good news is that this law is very easy to comply with. Manufacturers must provide a no-cost recycling program in the state of California and every HVAC wholesale distributor in California is required to collect waste mercury thermostats. All contractors need to do is have their technicians hang-on to the mercury thermostats they remove from service and make arrangements to drop-off the waste thermostats at any HVAC wholesale distributor free-of-charge.

Thirty manufacturers are supporting the non-profit Thermostat Recycling Corporation (TRC) which is implementing and promoting the collection program in California and other states.

We are interested in working with your organization to increase awareness about the legal obligations of the HVAC industry and TRC's program. Currently less than 50% of all waste mercury thermostats are being recycled in California and it is critical for the HVAC industry to increase the number being recycled. The better this program performs decreases the likelihood of more onerous regulations on the HVAC industry. One has to look no further than the current rule-making by the Department of Toxic Substances Control's (DTSC) to see the risk to the HVAC industry in California.

We attached information on the program and we encourage you to share it with your members. We plan to follow-up with you to discuss ideas on further promoting the program and increasing HVAC contractor's participation in this program.

For more information, please call 703-841-3243 or email Neisha.Johnson@nema.org. Additional information is also available at TRC's website at www.thermostat-recycle.org.

Sincerely,

Mark Tibbetts
Executive Director

Part III Statement of Program Service Accomplishments

Check if Schedule O contains a response to any question in this Part III

1 Briefly describe the organization's mission:
NONE

2 Did the organization undertake any significant program services during the year which were not listed on the prior Form 990 or 990-EZ? Yes No
 If "Yes," describe these new services on Schedule O.

3 Did the organization cease conducting, or make significant changes in how it conducts, any program services? Yes No
 If "Yes," describe these changes on Schedule O.

4 Describe the exempt purpose achievements for each of the organization's three largest program services by expenses. Section 501(c)(3) and 501(c)(4) organizations and section 4947(a)(1) trusts are required to report the amount of grants and allocations to others, the total expenses, and revenue, if any, for each program service reported.

4a (Code: _____) (Expenses \$ **620,299**, including grants of \$ _____) (Revenue \$ _____)
TRC FACILITATES THE PROPER MANAGEMENT OF WASTE MERCURY THERMOSTATS BY PROVIDING RECYCLING CONTAINERS FOR THE COLLECTION AND TRANSPORT OF WASTE MERCURY THERMOSTATS TO ELIGIBLE COLLECTION SITES IN ALL US STATES, EXCEPT ALASKA AND HAWAII. TRC ALSO CONDUCTS AN EDUCATIONAL CAMPAIGN PROMOTING THE PROPER MANAGEMENT OF WASTE MERCURY THERMOSTATS. DURING 2010, TRC HAS COLLECTED OVER 200,000 MERCURY-CONTAINING THERMOSTATS. THIS TRANSLATES TO ALMOST 1,900 POUNDS OF MERCURY REMOVED OUT OF THE WASTE STREAM.

4b (Code: _____) (Expenses \$ _____ including grants of \$ _____) (Revenue \$ _____)

4c (Code: _____) (Expenses \$ _____ including grants of \$ _____) (Revenue \$ _____)

4d Other program services. (Describe in Schedule O.)
 (Expenses \$ _____ including grants of \$ _____) (Revenue \$ _____)

4e Total program service expenses **620,299.**

Part IV Checklist of Required Schedules

	Yes	No
1 Is the organization described in section 501(c)(3) or 4947(a)(1) (other than a private foundation)? <i>If "Yes," complete Schedule A</i>		X
2 Is the organization required to complete Schedule B, Schedule of Contributors?		X
3 Did the organization engage in direct or indirect political campaign activities on behalf of or in opposition to candidates for public office? <i>If "Yes," complete Schedule C, Part I</i>		X
4 Section 501(c)(3) organizations. Did the organization engage in lobbying activities, or have a section 501(h) election in effect during the tax year? <i>If "Yes," complete Schedule C, Part II</i>		
5 Is the organization a section 501(c)(4), 501(c)(5), or 501(c)(6) organization that receives membership dues, assessments, or similar amounts as defined in Revenue Procedure 98-19? <i>If "Yes," complete Schedule C, Part III</i>	X	
6 Did the organization maintain any donor advised funds or any similar funds or accounts where donors have the right to provide advice on the distribution or investment of amounts in such funds or accounts? <i>If "Yes," complete Schedule D, Part I</i>		X
7 Did the organization receive or hold a conservation easement, including easements to preserve open space, the environment, historic land areas, or historic structures? <i>If "Yes," complete Schedule D, Part II</i>		X
8 Did the organization maintain collections of works of art, historical treasures, or other similar assets? <i>If "Yes," complete Schedule D, Part III</i>		X
9 Did the organization report an amount in Part X, line 21; serve as a custodian for amounts not listed in Part X; or provide credit counseling, debt management, credit repair, or debt negotiation services? <i>If "Yes," complete Schedule D, Part IV</i>		X
10 Did the organization, directly or through a related organization, hold assets in trust, permanent, or quasi-endowments? <i>If "Yes," complete Schedule D, Part V</i>		X
11 If the organization's answer to any of the following questions is "Yes," then complete Schedule D, Parts VI, VII, VIII, IX, or X as applicable.		
a Did the organization report an amount for land, buildings, and equipment in Part X, line 10? <i>If "Yes," complete Schedule D, Part VI</i>		X
b Did the organization report an amount for investments - other securities in Part X, line 12 that is 5% or more of its total assets reported in Part X, line 16? <i>If "Yes," complete Schedule D, Part VII</i>		X
c Did the organization report an amount for investments - program related in Part X, line 13 that is 5% or more of its total assets reported in Part X, line 16? <i>If "Yes," complete Schedule D, Part VIII</i>		X
d Did the organization report an amount for other assets in Part X, line 15 that is 5% or more of its total assets reported in Part X, line 16? <i>If "Yes," complete Schedule D, Part IX</i>		X
e Did the organization report an amount for other liabilities in Part X, line 25? <i>If "Yes," complete Schedule D, Part X</i>		X
f Did the organization's separate or consolidated financial statements for the tax year include a footnote that addresses the organization's liability for uncertain tax positions under FIN 48 (ASC 740)? <i>If "Yes," complete Schedule D, Part X</i>		X
12a Did the organization obtain separate, independent audited financial statements for the tax year? <i>If "Yes," complete Schedule D, Parts XI, XII, and XIII</i>		X
b Was the organization included in consolidated, independent audited financial statements for the tax year? <i>If "Yes," and if the organization answered "No" to line 12a, then completing Schedule D, Parts XI, XII, and XIII is optional</i>		X
13 Is the organization a school described in section 170(b)(1)(A)(ii)? <i>If "Yes," complete Schedule E</i>		X
14a Did the organization maintain an office, employees, or agents outside of the United States?		X
b Did the organization have aggregate revenues or expenses of more than \$10,000 from grantmaking, fundraising, business, and program service activities outside the United States? <i>If "Yes," complete Schedule F, Parts I and IV</i>		X
15 Did the organization report on Part IX, column (A), line 3, more than \$5,000 of grants or assistance to any organization or entity located outside the United States? <i>If "Yes," complete Schedule F, Parts II and IV</i>		X
16 Did the organization report on Part IX, column (A), line 3, more than \$5,000 of aggregate grants or assistance to individuals located outside the United States? <i>If "Yes," complete Schedule F, Parts III and IV</i>		X
17 Did the organization report a total of more than \$15,000 of expenses for professional fundraising services on Part IX, column (A), lines 6 and 11a? <i>If "Yes," complete Schedule G, Part I</i>		X
18 Did the organization report more than \$15,000 total of fundraising event gross income and contributions on Part VIII, lines 1c and 9a? <i>If "Yes," complete Schedule G, Part II</i>		X
19 Did the organization report more than \$15,000 of gross income from gaming activities on Part VIII, line 9a? <i>If "Yes," complete Schedule G, Part III</i>		X
20a Did the organization operate one or more hospitals? <i>If "Yes," complete Schedule H</i>		X
b <i>If "Yes" to line 20a, did the organization attach its audited financial statements to this return? Note: Some Form 990 filers that operate one or more hospitals must attach audited financial statements (see instructions)</i>		

Form 990 (2010)

032993 12-21-10

Part IV Checklist of Required Schedules (continued)

	Yes	No
21 Did the organization report more than \$5,000 of grants and other assistance to governments and organizations in the United States on Part IX, column (A), line 1? If "Yes," complete Schedule I, Parts I and II		X
22 Did the organization report more than \$5,000 of grants and other assistance to individuals in the United States on Part IX, column (A), line 2? If "Yes," complete Schedule I, Parts I and III		X
23 Did the organization answer "Yes" to Part VII, Section A, line 3, 4, or 5 about compensation of the organization's current and former officers, directors, trustees, key employees, and highest compensated employees? If "Yes," complete Schedule J		X
24a Did the organization have a tax-exempt bond issue with an outstanding principal amount of more than \$100,000 as of the last day of the year, that was issued after December 31, 2002? If "Yes," answer lines 24b through 24d and complete Schedule K. If "No," go to line 25		X
b Did the organization invest any proceeds of tax-exempt bonds beyond a temporary period exception?		
c Did the organization maintain an escrow account other than a refunding escrow at any time during the year to defease any tax-exempt bonds?		
d Did the organization act as an "on behalf of" issuer for bonds outstanding at any time during the year?		
25a Section 501(c)(3) and 501(c)(4) organizations. Did the organization engage in an excess benefit transaction with a disqualified person during the year? If "Yes," complete Schedule L, Part I		
b Is the organization aware that it engaged in an excess benefit transaction with a disqualified person in a prior year, and that the transaction has not been reported on any of the organization's prior Forms 990 or 990-EZ? If "Yes," complete Schedule L, Part I		
26 Was a loan to or by a current or former officer, director, trustee, key employee, highly compensated employee, or disqualified person outstanding as of the end of the organization's tax year? If "Yes," complete Schedule L, Part II		X
27 Did the organization provide a grant or other assistance to an officer, director, trustee, key employee, substantial contributor, or a grant selection committee member, or to a person related to such an individual? If "Yes," complete Schedule L, Part III		X
28 Was the organization a party to a business transaction with one of the following parties (see Schedule L, Part IV instructions for applicable filing thresholds, conditions, and exceptions):		
a A current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
b A family member of a current or former officer, director, trustee, or key employee? If "Yes," complete Schedule L, Part IV		X
c An entity of which a current or former officer, director, trustee, or key employee (or a family member thereof) was an officer, director, trustee, or direct or indirect owner? If "Yes," complete Schedule L, Part IV		X
29 Did the organization receive more than \$25,000 in non-cash contributions? If "Yes," complete Schedule M		X
30 Did the organization receive contributions of art, historical treasures, or other similar assets, or qualified conservation contributions? If "Yes," complete Schedule M		X
31 Did the organization liquidate, terminate, or dissolve and cease operations? If "Yes," complete Schedule N, Part I		X
32 Did the organization sell, exchange, dispose of, or transfer more than 25% of its net assets? If "Yes," complete Schedule N, Part II		X
33 Did the organization own 100% of an entity disregarded as separate from the organization under Regulations sections 301.7701-2 and 301.7701-3? If "Yes," complete Schedule R, Part I		X
34 Was the organization related to any tax-exempt or taxable entity? If "Yes," complete Schedule R, Parts II, III, IV, and V, line 1		X
35 Is any related organization a controlled entity within the meaning of section 512(b)(13)?		X
a Did the organization receive any payment from or engage in any transaction with a controlled entity within the meaning of section 512(b)(13)? If "Yes," complete Schedule R, Part V, line 2 <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		
36 Section 501(c)(3) organizations. Did the organization make any transfers to an exempt non-charitable related organization? If "Yes," complete Schedule R, Part V, line 2		
37 Did the organization conduct more than 6% of its activities through an entity that is not a related organization and that is treated as a partnership for federal income tax purposes? If "Yes," complete Schedule R, Part VI		X
38 Did the organization complete Schedule O and provide explanations in Schedule O for Part VI, lines 11 and 19? Note. All Form 990 filers are required to complete Schedule O	X	

Form 990 (2010)

432004 12-31-10

PART V Statements Regarding Other IRS Filings and Tax Compliance

Check if Schedule O contains a response to any question in this Part V

		Yes	No
1a	Enter the number reported in Box 3 of Form 1099. Enter -0- if not applicable		
1b	Enter the number of Forms W-2G included in line 1a. Enter -0- if not applicable		
c	Did the organization comply with backup withholding rules for reportable payments to vendors and reportable gaming (gambling) winnings to prize winners?	X	
2a	Enter the number of employees reported on Form W-3, Transmittal of Wage and Tax Statements, filed for the calendar year ending with or within the year covered by this return		
b	If at least one is reported on line 2a, did the organization file all required federal employment tax returns? <i>Note. If the sum of lines 1a and 2a is greater than 250, you may be required to e-file. (see instructions)</i>		
3a	Did the organization have unrelated business gross income of \$1,000 or more during the year?		X
b	If "Yes," has it filed a Form 990-T for this year? If "No," provide an explanation in Schedule O		
4a	At any time during the calendar year, did the organization have an interest in, or a signature or other authority over, a financial account in a foreign country (such as a bank account, securities account, or other financial account)?		X
b	If "Yes," enter the name of the foreign country: <i>See instructions for filing requirements for Form TD F 90-22.1, Report of Foreign Bank and Financial Accounts.</i>		
5a	Was the organization a party to a prohibited tax shelter transaction at any time during the tax year?		X
b	Did any taxable party notify the organization that it was or is a party to a prohibited tax shelter transaction?		X
c	If "Yes," to line 5a or 5b, did the organization file Form 8886-T?		
6a	Does the organization have annual gross receipts that are normally greater than \$100,000, and did the organization solicit any contributions that were not tax deductible?		X
b	If "Yes," did the organization include with every solicitation an express statement that such contributions or gifts were not tax deductible?		
7	Organizations that may receive deductible contributions under section 170(e).		
a	Did the organization receive a payment in excess of \$75 made partly as a contribution and partly for goods and services provided to the payor?		
b	If "Yes," did the organization notify the donor of the value of the goods or services provided?		
c	Did the organization sell, exchange, or otherwise dispose of tangible personal property for which it was required to file Form 8282?		
d	If "Yes," indicate the number of Forms 8282 filed during the year		
e	Did the organization receive any funds, directly or indirectly, to pay premiums on a personal benefit contract?		
f	Did the organization, during the year, pay premiums, directly or indirectly, on a personal benefit contract?		
g	If the organization received a contribution of qualified intellectual property, did the organization file Form 8899 as required?		
h	If the organization received a contribution of cars, boats, airplanes, or other vehicles, did the organization file a Form 1098-C?		
8	Sponsoring organizations maintaining donor advised funds and section 509(a)(3) supporting organizations. Did the supporting organization, or a donor advised fund maintained by a sponsoring organization, have excess business holdings at any time during the year?		
9	Sponsoring organizations maintaining donor advised funds.		
a	Did the organization make any taxable distributions under section 4966?		
b	Did the organization make a distribution to a donor, donor advisor, or related person?		
10	Section 501(c)(7) organizations. Enter:		
a	Initiation fees and capital contributions included on Part VII, line 12		
b	Gross receipts, included on Form 990, Part VII, line 12, for public use of club facilities		
11	Section 501(c)(12) organizations. Enter:		
a	Gross income from members or shareholders		
b	Gross income from other sources (Do not net amounts due or paid to other sources against amounts due or received from them.)		
12a	Section 4947(a)(1) non-exempt charitable trusts. Is the organization filing Form 990 in lieu of Form 1041?		
b	If "Yes," enter the amount of tax-exempt interest received or accrued during the year		
13	Section 501(c)(29) qualified nonprofit health insurance issuers.		
a	Is the organization licensed to issue qualified health plans in more than one state? <i>Note. See the instructions for additional information the organization must report on Schedule O.</i>		
b	Enter the amount of reserves the organization is required to maintain by the states in which the organization is licensed to issue qualified health plans		
c	Enter the amount of reserves on hand		
14a	Did the organization receive any payments for indoor tanning services during the tax year?		X
b	If "Yes," has it filed a Form 720 to report these payments? If "No," provide an explanation in Schedule O		

Part VI Governance, Management, and Disclosure For each "Yes" response to lines 2 through 7b below, and for a "No" response to line 8a, 8b, or 10b below, describe the circumstances, processes, or changes in Schedule O. See instructions.

Check if Schedule O contains a response to any question in this Part VI **X**

Section A. Governing Body and Management

	1a	1b	2	3	4	5	6	7a	7b	8a	8b	9	Yes	No
1a Enter the number of voting members of the governing body at the end of the tax year	4													
b Enter the number of voting members included in line 1a, above, who are independent		4												
2 Did any officer, director, trustee, or key employee have a family relationship or a business relationship with any other officer, director, trustee, or key employee?														X
3 Did the organization delegate control over management duties customarily performed by or under the direct supervision of officers, directors or trustees, or key employees to a management company or other person?														X
4 Did the organization make any significant changes to its governing documents since the prior Form 990 was filed?														X
5 Did the organization become aware during the year of a significant diversion of the organization's assets?														X
6 Does the organization have members or stockholders?										X				
7a Does the organization have members, stockholders, or other persons who may elect one or more members of the governing body?										X				
b Are any decisions of the governing body subject to approval by members, stockholders, or other persons?														X
8 Did the organization contemporaneously document the meetings held or written actions undertaken during the year by the following:														
a The governing body?										X				
b Each committee with authority to act on behalf of the governing body?										X				
9 Is there any officer, director, trustee, or key employee listed in Part VII, Section A, who cannot be reached at the organization's mailing address? If "Yes," provide the names and addresses in Schedule O														X

Section B. Policies (This Section B requests information about policies not required by the Internal Revenue Code.)

	10a	10b	11a	11b	12a	12b	12c	13	14	15a	15b	16a	16b	Yes	No
10a Does the organization have local chapters, branches, or affiliates?															X
b If "Yes," does the organization have written policies and procedures governing the activities of such chapters, affiliates, and branches to ensure their operations are consistent with those of the organization?															
11a Has the organization provided a copy of this Form 990 to all members of its governing body before filing the form?			X												
b Describe in Schedule O the process, if any, used by the organization to review this Form 990.															
12a Does the organization have a written conflict of interest policy? If "No," go to line 13					X										
b Are officers, directors or trustees, and key employees required to disclose annually interests that could give rise to conflicts?															X
c Does the organization regularly and consistently monitor and enforce compliance with the policy? If "Yes," describe in Schedule O how this is done															X
13 Does the organization have a written whistleblower policy?								X							
14 Does the organization have a written document retention and destruction policy?								X							
15 Did the process for determining compensation of the following persons include a review and approval by independent persons, comparability data, and contemporaneous substantiation of the deliberation and decision?															
a The organization's CEO, Executive Director, or top management official										X					
b Other officers or key employees of the organization										X					
If "Yes" to line 15a or 15b, describe the process in Schedule O. (See instructions.)															
16a Did the organization invest in, contribute assets to, or participate in a joint venture or similar arrangement with a taxable entity during the year?															X
b If "Yes," has the organization adopted a written policy or procedure requiring the organization to evaluate its participation in joint venture arrangements under applicable federal tax law, and taken steps to safeguard the organization's exempt status with respect to such arrangements?															

Section C. Disclosure

17 List the states with which a copy of this Form 990 is required to be filed	CA, MT
18 Section 6104 requires an organization to make its Forms 1023 (or 1024 if applicable), 990, and 990-T (501(c)(3)s only) available for public inspection. Indicate how you make these available. Check all that apply. <input type="checkbox"/> Own website <input type="checkbox"/> Another's website <input checked="" type="checkbox"/> Upon request	
19 Describe in Schedule O whether (and if so, how), the organization makes its governing documents, conflict of interest policy, and financial statements available to the public.	
20 State the name, physical address, and telephone number of the person who possesses the books and records of the organization:	MARK TIBBETTS - 703-841-3200 1300 NORTH 17TH STREET, NO. 1752, ARLINGTON, VA 22209

(A) Name and title	(B) Average hours per week (describe hours for related organizations in Schedule C)	(C) Position (check all that apply)						(D) Reportable compensation from the organization (W-2/1099-MISC)	(E) Reportable compensation from related organizations (W-2/1099-MISC)	(F) Estimated amount of other compensation from the organization and related organizations
		Individual trustee or director	Transactional trustee	Officer	Key employee	Highest compensated employee	Former			
1b Sub-total							110,109.	0.	30,779.	
c Total from continuation sheets to Part VII, Section A							0.	0.	0.	
d Total (add lines 1b and 1c)							110,109.	0.	30,779.	

2 Total number of individuals (including but not limited to those listed above) who received more than \$100,000 in reportable compensation from the organization **1**

	Yes	No
3 Did the organization list any former officer, director or trustee, key employee, or highest compensated employee on line 1a? If "Yes," complete Schedule J for such individual		X
4 For any individual listed on line 1a, is the sum of reportable compensation and other compensation from the organization and related organizations greater than \$150,000? If "Yes," complete Schedule J for such individual		X
5 Did any person listed on line 1a receive or accrue compensation from any unrelated organization or individual for services rendered to the organization? If "Yes," complete Schedule J for such person		X

Section B. Independent Contractors

1 Complete this table for your five highest compensated independent contractors that received more than \$100,000 of compensation from the organization.

(A) Name and business address	(B) Description of services	(C) Compensation
HONEYWELL INTERNATIONAL, 1985 DOUGLAS DRIVE, GOLDEN VALLEY, MN 55422-3992	ADMINISTRATIVE AND RECYCLING SERVICES	240,974.

2 Total number of independent contractors (including but not limited to those listed above) who received more than \$100,000 in compensation from the organization **1**

Part VIII Statement of Revenue				(A)	(B)	(C)	(D)	
				Total revenue	Related or exempt function revenue	Unrelated business revenue	Revenue excluded from tax under sections 512, 513, or 514

	23 Secured mortgages and notes payable to unrelated third parties		23	
	24 Unsecured notes and loans payable to unrelated third parties		24	
25 Other liabilities. Complete Part X of Schedule D		25		
26 Total liabilities. Add lines 17 through 25		282,586.	26	324,829.
Net Assets or Fund Balances	Organizations that follow SFAS 117, check here <input checked="" type="checkbox"/> and complete lines 27 through 29, and lines 33 and 34.			
	27 Unrestricted net assets	-93,241.	27	-134,831.
	28 Temporarily restricted net assets		28	
	29 Permanently restricted net assets		29	
	Organizations that do not follow SFAS 117, check here <input type="checkbox"/> and complete lines 30 through 34.			
	30 Capital stock or trust principal, or current funds		30	
	31 Paid-in or capital surplus, or land, building, or equipment fund		31	
	32 Retained earnings, endowment, accumulated income, or other funds		32	
33 Total net assets or fund balances		-93,241.	33	-134,831.
34 Total liabilities and net assets/fund balances		189,345.	34	189,998.

Form 990 (2010)

Part XI Reconciliation of Net Assets

Check if Schedule O contains a response to any question in this Part XI

1	Total revenue (must equal Part VIII, column (A), line 12)	1	672,104.
2	Total expenses (must equal Part IX, column (A), line 25)	2	713,694.
3	Revenue less expenses. Subtract line 2 from line 1	3	-41,590.
4	Net assets or fund balances at beginning of year (must equal Part X, line 33, column (A))	4	-93,241.
5	Other changes in net assets or fund balances (explain in Schedule O)	5	
6	Net assets or fund balances at end of year. Combine lines 3, 4, and 5 (must equal Part X, line 33, column (B))	6	-134,831.

Part XII Financial Statements and Reporting

Check if Schedule O contains a response to any question in this Part XII

		Yes	No
1	Accounting method used to prepare the Form 990: <input type="checkbox"/> Cash <input checked="" type="checkbox"/> Accrual <input type="checkbox"/> Other _____ If the organization changed its method of accounting from a prior year or checked "Other," explain in Schedule O.		
2a	Were the organization's financial statements compiled or reviewed by an independent accountant?	X	
b	Were the organization's financial statements audited by an independent accountant?		X
c	If "Yes" to line 2a or 2b, does the organization have a committee that assumes responsibility for oversight of the audit, review, or completion of its financial statements and selection of an independent accountant? If the organization changed either its oversight process or selection process during the tax year, explain in Schedule O.	X	
d	If "Yes" to line 2a or 2b, check a box below to indicate whether the financial statements for the year were issued on a separate basis, consolidated basis, or both: <input checked="" type="checkbox"/> Separate basis <input type="checkbox"/> Consolidated basis <input type="checkbox"/> Both consolidated and separate basis		
3a	As a result of a federal award, was the organization required to undergo an audit or audits as set forth in the Single Audit Act and OMB Circular A-133?		X
b	If "Yes," did the organization undergo the required audit or audits? If the organization did not undergo the required audit or audits, explain why in Schedule O and describe any steps taken to undergo such audits.		

Form 990 (2010)

SCHEDULE C
(Form 990 or 990-EZ)

Political Campaign and Lobbying Activities

OMB No. 1545-0047

2010

Department of the Treasury
Internal Revenue Service

For Organizations Exempt From Income Tax Under section 501(c) and section 527

▶ **Complete if the organization is described below.** ▶ **Attach to Form 990 or Form 990-EZ.**
▶ **See separate instructions.**

Open to Public Inspection

If the organization answered "Yes," to Form 990, Part IV, line 3, or Form 990-EZ, Part V, line 46 (Political Campaign Activities), then

- Section 501(c)(3) organizations: Complete Parts I-A and B. Do not complete Part I-C.
- Section 501(c) (other than section 501(c)(3)) organizations: Complete Parts I-A and C below. Do not complete Part I-B.
- Section 527 organizations: Complete Part I-A only.

If the organization answered "Yes," to Form 990, Part IV, line 4, or Form 990-EZ, Part VI, line 47 (Lobbying Activities), then

- Section 501(c)(3) organizations that have filed Form 5708 (election under section 501(h)): Complete Part II-A. Do not complete Part II-B.
- Section 501(c)(3) organizations that have NOT filed Form 5708 (election under section 501(h)): Complete Part II-B. Do not complete Part II-A.

If the organization answered "Yes," to Form 990, Part IV, line 5 (Proxy Tax), or Form 990-EZ, Part V, line 55a (Proxy Tax), then

- Section 501(c)(4), (5), or (6) organizations: Complete Part III.

Name of organization: **THERMOSTAT RECYCLING CORPORATION** Employer identification number: **54-1830284**

Part I-A Complete if the organization is exempt under section 501(c) or is a section 527 organization.

- 1 Provide a description of the organization's direct and indirect political campaign activities in Part IV.
- 2 Political expenditures ▶ \$ _____
- 3 Volunteer hours _____

Part I-B Complete if the organization is exempt under section 501(c)(3).

- 1 Enter the amount of any excise tax incurred by the organization under section 4955 ▶ \$ _____
 - 2 Enter the amount of any excise tax incurred by organization managers under section 4955 ▶ \$ _____
 - 3 If the organization incurred a section 4955 tax, did it file Form 4720 for this year? Yes No
 - 4a Was a correction made? Yes No
- b If "Yes," describe in Part IV.

Part I-C Complete if the organization is exempt under section 501(c), except section 501(c)(3).

- 1 Enter the amount directly expended by the filing organization for section 527 exempt function activities ▶ \$ _____
- 2 Enter the amount of the filing organization's funds contributed to other organizations for section 527 exempt function activities ▶ \$ _____
- 3 Total exempt function expenditures. Add lines 1 and 2. Enter here and on Form 1120-POL, line 17b ▶ \$ _____
- 4 Did the filing organization file Form 1120-POL for this year? Yes No
- 5 Enter the names, addresses and employer identification number (EIN) of all section 527 political organizations to which the filing organization made payments. For each organization listed, enter the amount paid from the filing organization's funds. Also enter the amount of political contributions received that were promptly and directly delivered to a separate political organization, such as a separate segregated fund or a political action committee (PAC). If additional space is needed, provide information in Part IV.

(a) Name	(b) Address	(c) EIN	(d) Amount paid from filing organization's funds. If none, enter -0-	(e) Amount of political contributions received and promptly and directly delivered to a separate political organization. If none, enter -0-

For Paperwork Reduction Act Notice, see the Instructions for Form 990 or 990-EZ. Schedule C (Form 990 or 990-EZ) 2010 LHA

Part II-A Complete if the organization is exempt under section 501(c)(3) and filed Form 5768 (election under section 501(h)).

- A Check if the filing organization belongs to an affiliated group.
 B Check if the filing organization checked box A and "limited control" provisions apply.

Limits on Lobbying Expenditures (The term "expenditures" means amounts paid or incurred.)		(a) Filing organization's totals	(b) Affiliated group totals												
1a Total lobbying expenditures to influence public opinion (grass roots lobbying)															
b Total lobbying expenditures to influence a legislative body (direct lobbying)															
c Total lobbying expenditures (add lines 1a and 1b)															
d Other exempt purpose expenditures															
e Total exempt purpose expenditures (add lines 1c and 1d)															
f Lobbying nontaxable amount. Enter the amount from the following table in both columns. If the amount on line 1e, column (a) or (b) is:															
<table border="1"> <thead> <tr> <th>If the amount on line 1e, column (a) or (b) is:</th> <th>The lobbying nontaxable amount is:</th> </tr> </thead> <tbody> <tr> <td>Not over \$500,000</td> <td>20% of the amount on line 1e.</td> </tr> <tr> <td>Over \$500,000 but not over \$1,000,000</td> <td>\$100,000 plus 15% of the excess over \$500,000.</td> </tr> <tr> <td>Over \$1,000,000 but not over \$1,500,000</td> <td>\$175,000 plus 10% of the excess over \$1,000,000.</td> </tr> <tr> <td>Over \$1,500,000 but not over \$17,000,000</td> <td>\$225,000 plus 5% of the excess over \$1,500,000.</td> </tr> <tr> <td>Over \$17,000,000</td> <td>\$1,000,000.</td> </tr> </tbody> </table>		If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:	Not over \$500,000	20% of the amount on line 1e.	Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.	Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.	Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.	Over \$17,000,000	\$1,000,000.		
If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:														
Not over \$500,000	20% of the amount on line 1e.														
Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.														
Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.														
Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.														
Over \$17,000,000	\$1,000,000.														
g Grassroots nontaxable amount (enter 25% of line 1f)															
h Subtract line 1g from line 1e. If zero or less, enter -0-															
i Subtract line 1f from line 1c. If zero or less, enter -0-															
j If there is an amount other than zero on either line 1h or line 1i, did the organization file Form 4720 reporting section 4911 tax for this year?		<input type="checkbox"/> Yes	<input type="checkbox"/> No												

4-Year Averaging Period Under Section 501(h)
 (Some organizations that made a section 501(h) election do not have to complete all of the five columns below. See the instructions for lines 2a through 2f on page 4.)

Lobbying Expenditures During 4-Year Averaging Period					
Calendar year (or fiscal year beginning in)	(a) 2007	(b) 2008	(c) 2009	(d) 2010	(e) Total
2a Lobbying nontaxable amount					
b Lobbying ceiling amount (150% of line 2a, column (a))					
c Total lobbying expenditures					
d Grassroots nontaxable amount					
e Grassroots ceiling amount (150% of line 2d, column (a))					
f Grassroots lobbying expenditures					

Schedule C (Form 990 or 990-EZ) 2010

Part II-B Complete if the organization is exempt under section 501(c)(3) and has NOT filed Form 5768 (election under section 501(h)).

	(a)		(b)
	Yes	No	Amount
1 During the year, did the filing organization attempt to influence foreign, national, state or local legislation, including any attempt to influence public opinion on a legislative matter or referendum, through the use of:			
a Volunteers?			
b Paid staff or management (include compensation in expenses reported on lines 1c through 1i)?			
c Media advertisements?			
d Mailings to members, legislators, or the public?			
e Publications, or published or broadcast statements?			
f Grants to other organizations for lobbying purposes?			
g Direct contact with legislators, their staffs, government officials, or a legislative body?			
h Rallies, demonstrations, seminars, conventions, speeches, lectures, or any similar means?			
i Other activities? If "Yes," describe in Part IV			
j Total. Add lines 1c through 1i			
2a Did the activities in line 1 cause the organization to be not described in section 501(c)(3)?			
b If "Yes," enter the amount of any tax incurred under section 4912			
c If "Yes," enter the amount of any tax incurred by organization managers under section 4912			
d If the filing organization incurred a section 4912 tax, did it file Form 4720 for this year?			

Part III-A Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6).

	Yes	No
1 Were substantially all (90% or more) dues received nondeductible by members?		X
2 Did the organization make only in-house lobbying expenditures of \$2,000 or less?	X	
3 Did the organization agree to carryover lobbying and political expenditures from the prior year?		X

Part III-B Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6) if BOTH Part III-A, lines 1 and 2 are answered "No" OR if Part III-A, line 3 is answered "Yes."

1 Dues, assessments and similar amounts from members	1	
2 Section 162(e) nondeductible lobbying and political expenditures (do not include amounts of political expenses for which the section 527(f) tax was paid).		
a Current year	2a	
b Carryover from last year	2b	
c Total	2c	
3 Aggregate amount reported in section 8033(e)(1)(A) notices of nondeductible section 162(e) dues	3	
4 If notices were sent and the amount on line 2c exceeds the amount on line 3, what portion of the excess does the organization agree to carryover to the reasonable estimate of nondeductible lobbying and political expenditures next year?	4	
5 Taxable amount of lobbying and political expenditures (see instructions)	5	

Part IV Supplemental information

Complete this part to provide the descriptions required for Part I-A, line 1; Part I-B, line 4; Part I-C, line 5; and Part II-B, line 1i. Also, complete this part for any additional information.

Schedule O (Form 990 or 990-EZ) (2010)

Name of the organization

THERMOSTAT RECYCLING CORPORATION

Employer identification number

54-1830284

DETERMINE THE COMPENSATION OF THE ORGANIZATION'S EXECUTIVE DIRECTOR.

FORM 990, PART VI, SECTION C, LINE 19; TRC MAKES ITS GOVERNING DOCUMENTS,
CONFLICT OF INTEREST POLICY, AND FINANCIAL STATEMENTS AVAILABLE TO THE
PUBLIC UPON REQUEST (VIA E-MAIL OR MAIL).

PART XII, LINE 2C - THIS PROCESS HAS REMAINED UNCHANGED FROM THE PRIOR
YEAR.

Form **8868**
(Rev. January 2011)
Department of the Treasury
Internal Revenue Service

Application for Extension of Time To File an Exempt Organization Return

OMB No. 1545-1709

▶ **File a separate application for each return.**

- If you are filing for an Automatic 3-Month Extension, complete only Part I and check this box **X**
- If you are filing for an Additional (Not Automatic) 3-Month Extension, complete only Part II (on page 2 of this form).

Do not complete Part II unless you have already been granted an automatic 3-month extension on a previously filed Form 8868.

Electronic filing (e-file). You can electronically file Form 8868 if you need a 3-month automatic extension of time to file (6 months for a corporation required to file Form 990-T), or an additional (not automatic) 3-month extension of time. You can electronically file Form 8868 to request an extension of time to file any of the forms listed in Part I or Part II with the exception of Form 8870, Information Return for Transfers Associated With Certain Personal Benefit Contracts, which must be sent to the IRS in paper format (see instructions). For more details on the electronic filing of this form, visit www.irs.gov/efile and click on *e-file for Charities & Nonprofits*.

Part I Automatic 3-Month Extension of Time. Only submit original (no copies needed).

A corporation required to file Form 990-T and requesting an automatic 6-month extension - check this box and complete

Part I only

All other corporations (including 1120-C filers), partnerships, REMICs, and trusts must use Form 7004 to request an extension of time to file income tax returns.

Type or print	Name of exempt organization	Employer identification number
	THERMOSTAT RECYCLING CORPORATION	54-1830284
File by the due date for filing your return. See instructions.	Number, street, and room or suite no. if a P.O. box, see instructions. 1300 NORTH 17TH STREET, NO. 1752	
	City, town or post office, state, and ZIP code. For a foreign address, see instructions. ARLINGTON, VA 22209	

Enter the Return code for the return that this application is for (file a separate application for each return) **011**

California's Mercury Thermostat Collection Act: an EPR Approach

André Algazi
Toxics in Products Branch
California Department of Toxic Substances Control

First some background...

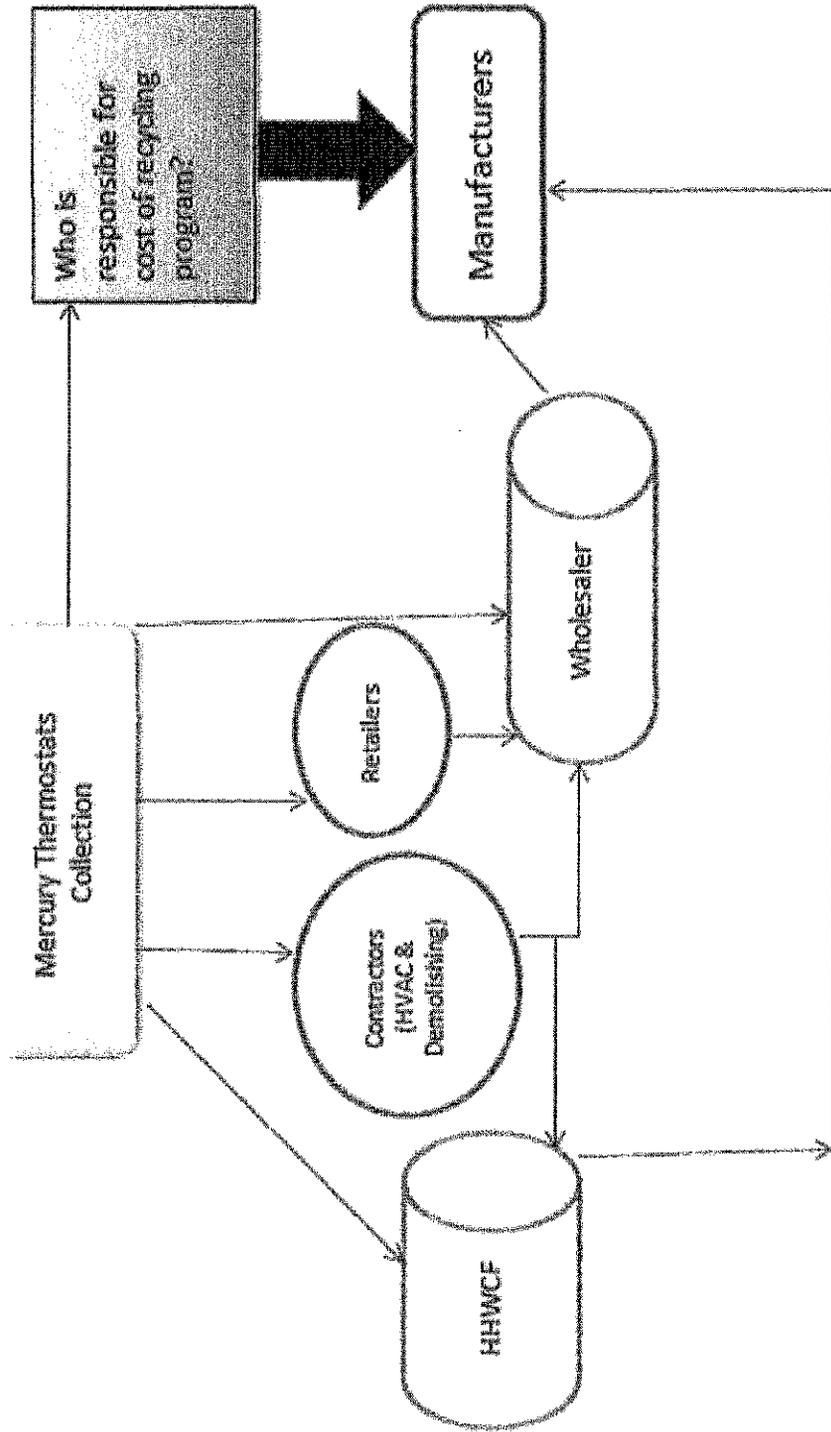

- In California, out-of-service mercury-added thermostats are hazardous waste
 - Regulated as universal waste since 2000
 - Disposal is banned, even for household-generated
- Mercury-added thermostats have been banned from sale since 2006

California's Law is EPR => The Focus is on Manufacturers...

- Individually, or as a group, they must establish and operate a program to collect out-of-service mercury-added thermostats
 - Provide bins to wholesalers of HVAC equipment and to HHW collection programs
 - Cover recycling process including cost
 - Beginning April 1, 2010, submit an annual report to the Department

Acronyms:

HHWCF- HOUSEHOLD HAZARDOUS WASTE COLLECTION FACILITY

HVAC- HEATING, VENTILATION AND AIRCONDITIONING

Manufacturer Requirements

- One-time Survey
 - By March 2009, submit survey plan and methodology for a survey to provide statistically-valid data on the number thermostats that become waste annually in California
 - By December 1, 2009: complete the survey
 - By December 31, 2009: Present all survey data to the State (DTSC)

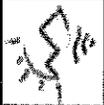

Manufacturer Outreach Requirements

- Develop Public Service Announcements
- Provide education and outreach materials to wholesalers, retailers and others
- These prescriptive requirements expired in December 2011 in expectation of DTSC's regulations...

Who Else Has Obligations under California's Thermostat Law?

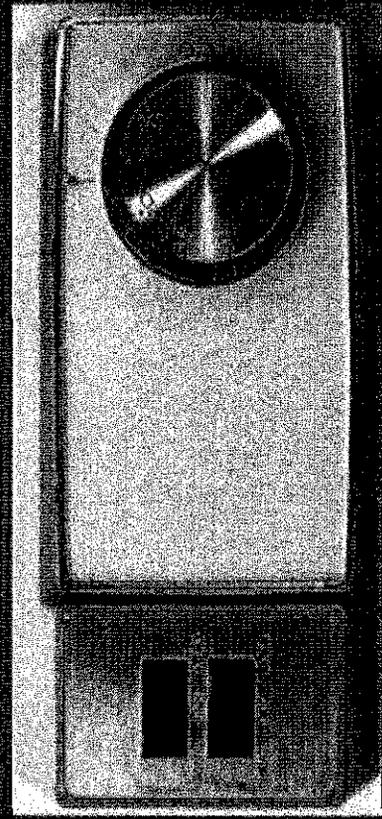

- HVAC contractors, building demolishers (contractors and others)
 - Remove and bring thermostats to a collection location
- Retailers
 - Don't sell thermostats from noncompliant manufacturers
- Wholesalers
 - Collect thermostats
 - Don't sell noncompliant brands

How is TRC Doing in California?

In 2011, TRC reports collecting:

- 18,697 intact mercury thermostats, containing 255.84 pounds of mercury
- This represents 8.4 percent of thermostats available and a 40 percent increase over 2010 collections

TRC Collection Trend...

Year of Collection	2009	2010	2011
Thermostats	7,542	13,340	18,697
Pounds of mercury	104.82	185.80	255.84

TRC Results in Context: vs. Thermostats Available*

Collection Year	2009	2010	2011
TRC data (Thermostats collected)	7,542	13,340	18,697
Available for recycling (SERA Estimates)	237,000	233,000	222,000

*Source: *Mercury-Containing Thermostats: Estimating Inventory and Flow from Existing Residential & Commercial Buildings*. December 28, 2009. Skumatz Economic Research Associates.

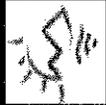

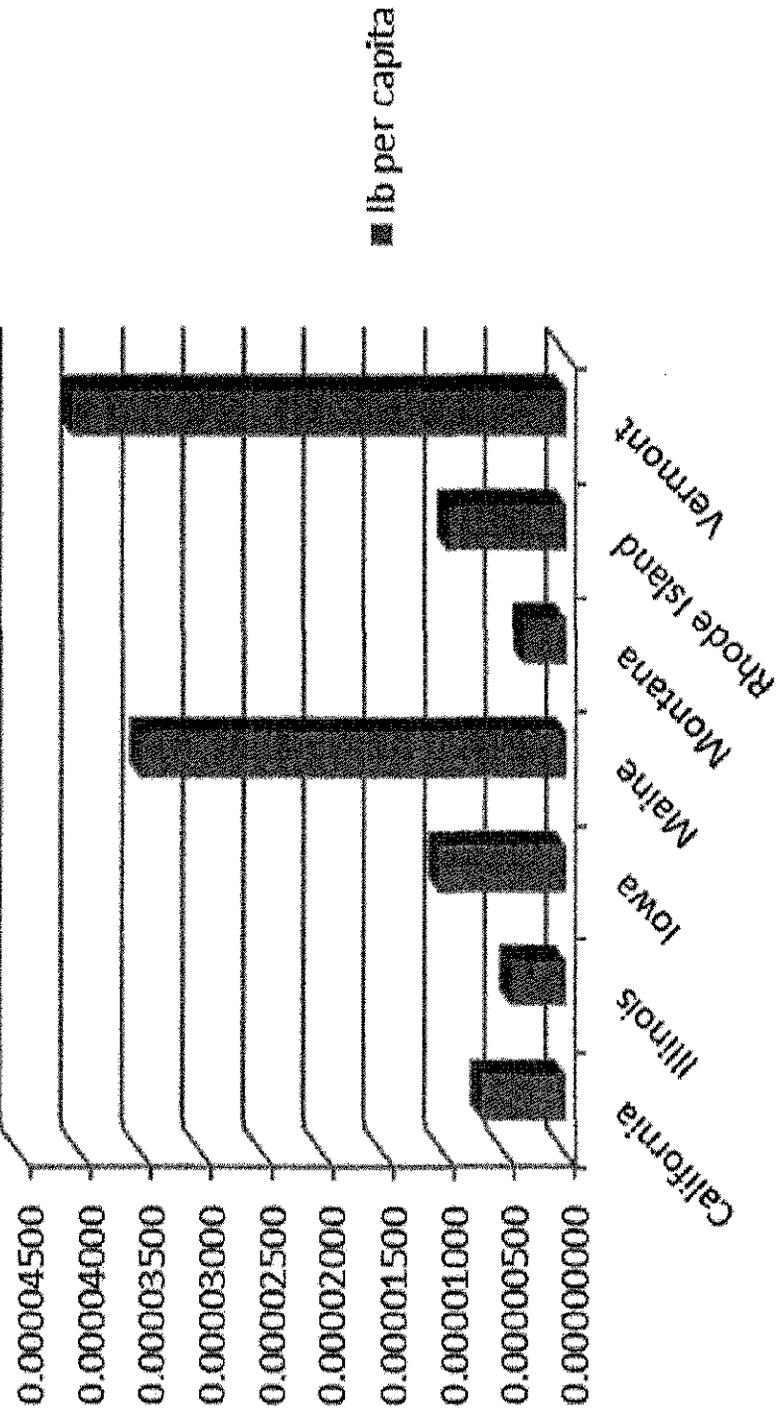

California Results in Context: 2011 Data for Some Other States

State	Total Intact Thermostats	Pounds of Mercury
California	18,697	255.84
Illinois	7,229	58.53
Iowa	3,850	31.63
Maine	6,616	46.36
Montana	274	3.46
Rhode Island	1,068	10.32
Vermont	3,572	25.37

California Results in Context: Mercury Recovered per capita

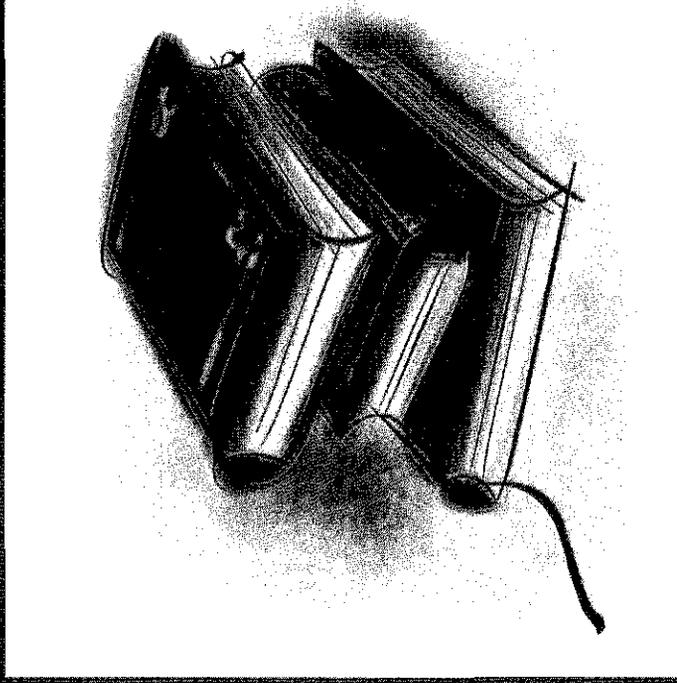

DTSC Efforts to Promote Thermostat Collection

- Outreach to supplement IRC's
 - Web postings
 - Educational Video for Contractors
 - Postcards, flyers, counter signs for wholesalers
- Field visits in 2010 and 2011
 - Some (many?) wholesalers not participating
 - Inadequate manufacturer outreach and education?
 - HVAC contractors feel burdened with various regulatory requirements...

DTSC's Draft Regulations...

- Projected public notice: Early Summer, 2012

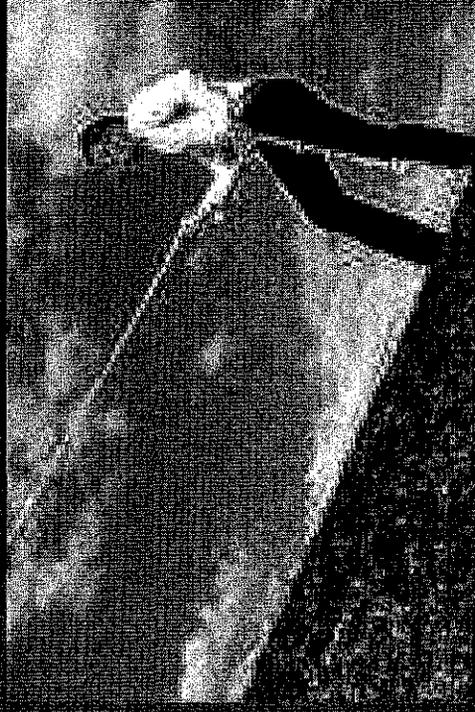

Key Elements of the Current Draft Regulations

- The methodology for determining the annual number of mercury-added thermostats becoming waste based on the manufacturer-funded SERA study
 - Previous proposal relied on contractor reporting after the first two years
- Ambitious collection rate goals from 2013
- Provides for a negotiated agreement on program modification if collection goal is not met

Improving Thermostat Collection Results ...

- Awareness
- Access to program
- Accountability

Thank you...

Eisenberg, Sara J.

From: Chuck Halnan [chuck@halnan.com]
Sent: Monday, October 01, 2012 1:31 PM
To: Eisenberg, Sara J.
Subject: Mercury Thermostat Regulations

In May and June of 2012 I had numerous discussions with DTSC officials concerning the proposed mercury thermostat collection requirements. These meetings were either on the phone or in person and were both one on one meetings as well as group meetings with DTSC staff and the contract lobbyists for manufacturers. From these discussions, it was clear to me that DTSC did not believe manufacturers would be able to achieve the ambitious collection rates set forth in the draft regulations and would likely be forced into some sort of enforcement proceedings almost immediately.

Amend Appendix XII of the California Code of Regulations, title 22, div 4.5, chapter 11.

Insert, in numerical and in alphabetical order within the existing section to read as follows:
(a) Subdivisions (b) and (c) of this appendix establish the California Hazardous Waste Code Numbers assigned to wastes which have been identified as hazardous wastes pursuant to the characteristics of hazardous waste as set forth in article 3 of this chapter or pursuant to the lists of hazardous wastes in article 4 of this chapter. These Waste Code Numbers shall be used in complying with the notification requirements of Health and Safety Code section 25153.6 and, where applicable, in the recordkeeping and reporting requirements under chapters 12 through 15, 18, and 20 of this division.

(b) List of California Hazardous Waste Codes arranged in numerical order:

614 Treated wood waste

(5) California Restricted Wastes:

615 Out-of-service mercury-added thermostats

711 Liquids with cyanides ≥ 1000 mg/l

(c) List of California Hazardous Waste Codes arranged alphabetically within each numbered category in this subdivision:

551 Laboratory waste chemicals

512 Other empty containers 30 gallons or more

615 Out-of-service mercury-added thermostats

541 Photochemical/photoprocessing waste

(5) California Restricted Wastes:

721 Liquids with arsenic > 500 mg/l

NOTE: Authority cited: Sections 25150 and 58012, Health and Safety Code. Reference: Sections 25117.9, 25122.7, and 25150, Health and Safety Code.

Chapter 35 Mercury Thermostat Collection Requirements

§67388.1 Scope

(a) This chapter establishes the requirements for the collection of out-of-service mercury-added thermostats.

(b) Nothing in this chapter is a limitation on the power of any other governmental agency to adopt or enforce additional requirements related to the management of the mercury-added thermostat materials.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.17, Health and Safety Code.

§67388.2 Applicability

Effective January 1, 2012 the requirements of this chapter shall apply to

- (a) Manufacturers as described in section 67388.3.
- (b) HVAC contractors as described in section 67388.3.
- (c) Demolition contractors as described in section 67388.3.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.17, Health and Safety Code.

§67388.3 Definitions

The definitions set forth in section 66260.10 of this division shall apply unless otherwise defined. The following terms shall apply to the definitions used in this chapter. The definitions of the following terms are stated the Health and Safety Code sections unless otherwise noted.

“Collection Rate” means the number of out-of-service mercury added thermostats collected, as reported by a manufacturer or group of manufacturers divided by the calculated number of out of service mercury added thermostats becoming waste annually, as defined in section 67388.4, expressed as a percentage.

“Demolition contractor” has the meaning of a C-21 contractor as defined in Cal. Code Regs., title 16, section 832.21.

“Household hazardous waste collection facility (HHWCF)” has the meaning of a facility as defined in Health and Safety Code, section 25218.1(f).

“Heating, ventilating and air-conditioning (HVAC) Contractor” has the meaning as defined in Cal. Code Regs., title 16, section 832.20.

“Manufacturer” has the meaning as defined in Health and Safety Code, section 25214.8.11(a).

“Mercury-added thermostat” has the meaning as defined in Health and Safety Code, section 25214.8.11(b)

“Out-of-service mercury-added thermostat” has the meaning as defined in Health and Safety Code, section 25214.8.11(c).

“Program” has the meaning as defined in Health and Safety Code, section 25214.8.11(d).

“Retailer” has the meaning as defined in Health and Safety Code, section 25214.8.11(e).

“Thermostat” has the meaning as defined in Health and Safety Code, section 25214.8.11(f).

“Wholesaler” has the meaning as defined in Health and Safety Code, section 25214.8.11(g).

Authority: Section 58012 and 25150 Health and Safety Code. Reference: Section 25214.8.11 and 25218.1, and 25214.8.17 Health and Safety Code. Reference: Cal. Code Regs., tit. 16, §832.20 and 832.21.

§67388.4 Methodology for Calculation of Number of Out-of-Service Mercury Added Thermostats Becoming Waste Annually

(a) For the purpose of the calculation in section 67388.5 the number of out-of-service mercury-added thermostats becoming waste are 222,000 for the 2012 calendar year .

(b) Beginning on March 1, 2013, the department shall post the number of out-of-service mercury-added thermostats that became waste for the previous year based on the following methodology:

Methodology of calculating the annual generation of Waste Mercury Thermostats

$$T_{AW} = T_{HVAC} + T_{UHWM} + T_{HHWCF}$$

T_{AW} = Number of out-of-service mercury-added thermostats that become waste annually

T_{HVAC} = Number of mercury thermostats removed from service as reported by licensed HVAC contractors.

T_{UHWM} = Number of out-of-service mercury reported on Uniform Hazardous Waste Manifests under California Waste Code 615.

T_{HHWCF} = Number of out-of-service mercury thermostats report in the California Household Hazardous Waste Collection Facilities form 303(b).

$$T = (T_{lbs} \times 453.6 \text{ grams/lb}) \div 100 \text{ grams per thermostat}$$

T - Number of out-of-service thermostats collected

T_{lbs} - Weight of out-of-service thermostats collected

k - Conversion factor for weight of thermostat = 100 grams per thermostat

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.15, 25214.8.16 and 25214.8.17 Health and Safety Code.

§67388.5 Manufacturers' Annual Collection Rate

(a) The annual target collection rate for a manufacturer or a group of manufacturers shall be 20% of the number of out of service mercury added thermostats becoming waste annually.

(b) When the 20% target collection rate is met, the target collection rate for the next calendar year shall increase to 30% of the out-of-service mercury thermostats projected to become waste that year. Each time a target collection rate standard is met in a subsequent year, the target collection rate in the next calendar shall increase by 10% of the out-of-service mercury thermostats projected to become waste that year until the maximum feasible collection rate is achieved.

(c) The department shall assign a percentage of the collection rate to each manufacturer or group of manufacturers based upon each manufacturer's or group of manufacturers' share of total thermostats collected, less orphan product reported by all manufacturers or group of manufacturers.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25218.8.13 Health and Safety Code.

§67388.6 Manufacturer Program Requirements

(a) The Department may order a manufacturer or a group of manufacturers operating a program to revise its program and to undertake actions to comply with Article 10.2.2 of Chapter 6.5, Division 20, of the Health and Safety Code.

(b) The Department may review each manufacturer's or group of manufacturers' program each year, beginning in 2014, to determine whether revisions are needed to each program

(b) In order to assess whether revisions are needed to the program implemented by a manufacturer or a group of manufacturers, the Department shall:

(1) Compare the results of each program with the annual target collection rate specified in section 67388.5;

(2) Compare the results of the program(s) to those of other states where mercury added thermostat collection programs are mandated by law;

(3) Assess economic factors or market conditions that may adversely affect program results;

(4) Assess contractor compliance with sections 67388.7 and 67388.9 and other relevant and applicable provisions of law.

(c) If a manufacturer or group of manufacturers fails to revise its program as directed by the Department, the Department shall post a notice on its Internet Website listing the manufacturer or group of manufacturers as out of compliance pursuant to Health and Safety Code section 25214.8.12.

(d) (1) A manufacturer or group of manufacturers may petition the department to reinstate the manufacturer or group of manufacturers.

(2) A petition submitted pursuant to this subsection shall include an updated plan correcting the deficiencies identified by the department.

(3) The sales prohibition specified in Health and Safety Code section 25214.8.12 shall be suspended during the department's review of the updated plan. This suspension of the sales prohibition shall be posted on the department's Internet Web site.

(4) If the department determines that the updated plan corrects the deficiencies identified pursuant to Section 42992, the department shall list the manufacturer or group of manufacturers as no longer banned. If the updated plan does not correct the deficiencies, the sales prohibition shall be reinstated, and the manufacturer or group of manufacturers shall be posted as non-compliant on the department's Internet Web site.

Authority: Section 58012, 25150, Health and Safety Code. Reference: Section 25180, 25187, 25189.2, 25218.8.13 and 25214.8.17 Health and Safety Code.

67388.7 Contractor Compliance Requirements

(a) Any HVAC contractor or Demolition contractor that removes a thermostat from any location shall determine if the thermostat is a mercury-added thermostat.

(b) Notwithstanding any other provision of law, any mercury-added thermostat removed from service in California by a contractor shall be taken to collection location with a collection container operating in accordance with these regulations.

(c) Notwithstanding any other provision of law, any mercury-added thermostat removed from service in California by a Demolition contractor shall be taken to a location that is authorized to collect out-of-service mercury-added thermostats

(c) A licensed HVAC contractor or a Demolition contractor that takes an out-of-service mercury added thermostat to a location with a collection bin and who properly reports in accordance with section 67388.7 shall not be deemed a generator of that thermostat under title 22, division 4.5 of the California Code of Regulations.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.15 and 25214.8.16, Health and Safety Code.

67388.8 Household Compliance Requirements

(a) Any person who maintains a household as defined in section 66273.9 and who removes a mercury added thermostat from that household without the assistance of a licensed contractor is subject to the requirements of section 66273.8.

(b) Any person who maintains a household as defined in section 66273.9 and hires a licensed contractor to remove a mercury added thermostat from that household shall relinquish possession of the thermostat to the contractor for proper handling.

Authority: Section 58012, 25150 and 25154, Health and Safety Code. Reference: Section 25154, 25214.8.15 and 25214.8.16, Health and Safety Code.

§67388.7 9 Reporting Requirements

(a) **Thermostat Manufacturer Group Programs:** In the annual report submitted to the department, each group of manufacturers operating a program collectively shall include the following information: (1) Household Hazardous Waste Collection Facility, Retailer, HVAC contractor, or HVAC wholesaler name and physical street address.

(2) For the previous calendar year, the date(s) the program received waste shipment(s) of mercury thermostats from the collection points, the collection point name, count of thermostats, count of mercury switches from collection point, number of loose switches, and pounds of mercury.

(3) For the previous calendar year, the number of whole thermostats collected by the name of manufacturer participating in the program.

(4) For the previous calendar year, the number of thermostats collected of indeterminate manufacturer.

(5) For the previous calendar year, the number of loose mercury switches recovered and the conversion factor for determining the number of whole thermostats the loose mercury switches represent.

(b) **Thermostat Manufacturer Individual Programs:** In the annual report submitted to the department, each manufacturer operating a program individually shall include the following information:

(1) Household Hazardous Waste Collection Facility, Retailer, HVAC contractor, or HVAC wholesaler name and physical street address (e.g. shipping address).

(2) The date(s) the thermostat manufacturer received waste shipment(s) of mercury thermostats from the collection point(s), collection point name, count of thermostats, count of mercury switches from collection point, number of loose switches, and pounds of mercury.

(3) The number of thermostats collected by the name of manufacturer. The number of thermostats collected of indeterminate manufacturer.

(4) The number of loose mercury switches recovered

(c) **Thermostat Retailers/Wholesalers Distributing by Mail**

(1) In the annual report submitted to the department, each thermostat retailer or wholesaler that distributes new thermostats by mail in the state shall include the following information: (2) The number of requests for pre-paid shipping labels. (3) For the previous calendar year, the number of thermostats collected and when identifiable the brand name of the manufacturer

(d) Contractor Reporting Requirements: Beginning January 1, 2013, each HVAC contractor shall submit, to the department, an annual report for period beginning January 1 and ending December 31 for the previous calendar year. Annual reports shall be submitted in an electronic format provided by the department within 60 days of the end of each reporting period.

(1) Each annual report shall include the following:

(A) The business location and mailing address;

(B) Contractors state license number;

(C) Name, address and telephone number of contact person with knowledge of reported mercury thermostat removals;

(D) The current number of service technicians employed by the contractor;

(E) The number of mercury thermostats removed from service by the contractor name and location of the collection point(s) where mercury thermostats are disposed of.

(2) Notwithstanding the exemption provided for by section 66273.8, a HVAC contractor shall keep a record of annual reports on site for 3 years.

(3) In addition to the reporting requirements in subsection (c), HVAC contractors shall keep written records on site for the following information:

(A) Date and customer location of each mercury thermostat replacement;

(B) Count of mercury thermostat(s) removed from each location;

(C) Location, date, and count of mercury thermostats disposed of at collection location.

Authority: Section 58012 and 25150, Health and Safety Code. Reference: Section 25214.8.13, 25214.8.15, 25214.8.16 and 25214.8.17 Health and Safety Code.

October 2, 2012

Director Debbie Raphael
California Department of Toxic Substances Control
State of California
1001 I Street
Sacramento, CA 95812

Subject: Initial Statement of Reasons for Mercury Thermostat Collection and Performance Requirement

Dear Ms. Raphael:

On behalf of Johnson Controls, Inc., Lennox International Inc., Trane U.S., Inc., and UTC Climate, Controls & Security, we want to thank the California Department of Toxic Substances Control (DTSC) for this opportunity to comment on the Initial Statement of Reasons for Mercury Thermostat Collection and Performance Requirement (ISOR). We appreciate the openness of staff and the Director to discuss the development of the proposed regulation. Although DTSC has been open to our input, serious flaws remain in this proposed regulation. Specifically, the targets outlined in the regulation are not achievable and will put all affected manufacturers in an immediate enforcement context with your department.

As manufacturers of thermostats, we acknowledge that mercury must be handled and disposed of properly. In a proactive response to this risk, thermostat manufacturers took action long before the enactment of AB 2347 (Ruskin, 2008) to collect and properly dispose of mercury-added thermostats by forming the Thermostat Recycling Corporation (TRC). TRC was formed in 1998 with the specific goal of removing all waste mercury-added thermostats in an effective and efficient manner. Thirty-one manufacturers support the TRC, a voluntary, non-profit organization that facilitates and promotes the collection, transport, and recycling of waste mercury-added thermostats.

Background

All states require the handling of waste mercury-added thermostats in accordance with state and federal regulations. Waste mercury-added thermostats are regulated as “universal wastes” in order to streamline their collection and transport. Federal universal waste regulations are set forth in [40 CFR Part 273](#). States may modify federal regulations and add additional or more restrictive requirements.

Eighteen states currently regulate the sale and/or disposal of mercury-added thermostats. In California, AB 1415 (Pavley, Chapter 578, Statutes 2005) banned the sale of mercury-added thermostats in California. Prior to AB 1415, Title 24 regulations began to require “setback thermostats” in 1978, with further definition in 1992, thus significantly limiting the number of mercury-added thermostats in commerce to approximately 5%. TRC has been actively working with contractors and wholesalers since 1998 and currently has over 350 collection sites in the State. TRC assumes all costs to ship and process mercury-added thermostats collected through the program. There are absolutely no fees for contractors or homeowners to discard thermostats in TRC recycling containers.

AB 2347 (Ruskin, Chapter 572, Statutes 2008), mandated a program for the collection by contractors and manufacturers of mercury-added thermostats in California. This bill requires the manufacturers to administer a program that contractors and wholesalers are required to participate in, as prescribed by the promulgated regulations.

Our industry has proactively sought to reduce the number of mercury thermostats entering the waste stream and remains committed to a successful recycling program in California. However, our companies are but one component of a thermostat’s life cycle and when forced to meet the Department’s unachievable goals, we immediately find ourselves in an enforcement context with the DTSC. For the reasons below, we believe the proposed regulations are unachievable and will put all affected manufacturers in an immediate enforcement context with DTSC:

Lack of HVAC or Demolition Contractor Participation

The critical point at which a thermostat is either directed toward appropriate recycling or the waste stream is when either the HVAC or demolition contractor comes in contact with the device during construction, service and/or replacement. If contractors are not mandated to participate in the collection and recycling of mercury thermostats there is no assurance they will comply within the required constructs of the program.

For this program to be successful, contractors must be mandated to participate.

The ISOR states that:

The current proposed regulations are part of California’s first full “extended producer responsibility” (EPR) law. The premise of EPR is that a person

who manufactures and/**or puts a product into commerce** that poses waste management challenges at end-of-life (often because it contains components or ingredients that render it a hazardous waste) should take responsibility for its safe recycling or disposal.

It is our assertion that all parties included in the supply chain share responsibility in this definition. Manufacturers, distributors, retailers and contractors are equally accountable for the installation, function, and waste of thermostats, however, contractors and wholesalers are largely precluded from the regulations. While the argument has been made that many of these are small businesses, HVAC contractors must currently comply with other regulations requiring collection and reporting of refrigerants. Given that these contractors must already comply with certain collection requirements, we do not believe that this minor responsibility to collect and document a hazardous waste is an undue burden.

Also of note are the comments from California Association of Sheet Metal and Air Conditioning Contractors' National Association (CAL SMACNA), California Legislative Conference of the Plumbing, Heating and Piping Industry (CLC), and Air Conditioning Sheet Metal Association (ACSMA) that state:

Thermostats containing mercury are collected by the HVAC workers from the customer's structure. The device is brought back to the small business. The mercury switch is removed from the thermostat. The switches are then placed into a non-breakable jar that provides containment for the mercury. When these jars are full they are physically taken to an approved collection site for mercury.

These collected thermostats are not recognized by this regulation and are not counted towards the performance requirements. With this being the stated common practice, it begs the question why the metrics provided in the CalRecycle 303a and CalRecycle 303b data are not allocated towards the annual performance requirements or even acknowledged in this regulation. Mercury-added thermostats handled in the manner described above are manifested and should be included in DTSC's evaluation of recycling performance. Even DTSC's Office of Criminal Investigation stated, in a May 31, 2011 letter, that:

“Eventually, the government and private landfills need to be contacted to determine thermostat collection rates at these facilities. Create a waste code for mercury thermostats in order to track via manifests.”

It is unreasonable to expect the objectives of an extended producer recycling program will be achieved without including thermostats collected outside of the TRC. It is not reasonable or equitable to expect manufacturers to be solely responsible for all collections when DTSC, CalRecycle, and others agree that thermostats are present in the universal waste and household hazardous waste streams. DTSC and proponents may argue that the collection of thermostats through other programs is accounted for by only requiring a 75%

collection rate. However, we believe this 25% gap will be filled by those who are not licensed contractors, handymen, and Do-It-Yourself homeowners.

Collection Rates are Unrealistic

This regulation lacks achievable recovery goals when compared to other recycling and collection programs. Furthermore, it lacks the necessary shared responsibility throughout the supply chain and forces manufacturers into an enforcement context within the first year of implementation.

We have performed a cursory review of other recycling programs and that review demonstrates that the collection rates in this proposed regulation are impossible to achieve. This program mandates that manufacturers collect 30% of the known thermostats by 2013, 45% by 2014, 55% by 2015, 65% by 2016, and 75% by 2017 and every year thereafter. DTSC states on page 3 of the ISOR:

“The proposed regulations establish a reasonable methodology for determining the number of out-of-service mercury-added thermostats becoming waste annually and establish ambitious but achievable collection rate goals for the former manufacturers of mercury thermostats. Thermostat Recycling Corporation (TRC) collected 19,927 mercury thermostats in 2011, containing a total of 254.84 pounds of mercury. The 2013 collection rate goal established by these regulations, 30 percent, represents 73,888 thermostats—3.7 times the number collected in 2011. Assuming the quantity of mercury per thermostat remains consistent, the thermostats required to be collected in 2013 will contain nearly 945 pounds of mercury—690 pounds more mercury than was collected in 2011.”

The matrix enclosed in this letter describes other programs that have either a low collection rate or took many years to reach a high level of collection (75%). Beverage containers are one of the only recycling programs to achieve those rates and it took over two-decades. With the proposed regulations, DTSC requires manufacturers to achieve similar results in just 5 years. Other programs like electronic waste, car tires, and others, do not include denominators and thus lack the hard performance requirements found in the mercury-added thermostats program. All of those other programs have the benefit of significant infrastructure and/or a more cohesive supply chain that contributed significantly to reaching their collection goals. In contrast, this proposed program has a critical link in the chain broken by the absence of contractors. Furthermore, the proposed program disregards existing mercury thermostat recycling streams and mandates an impossibly short time frame to reach the required recycling rates. The proposed also overlooks the declining presence of mercury thermostats in California since 1978, 1992, and 2006 as well as a lack of public awareness for existing mercury thermostats.

Destined to Fail

Our industry was closely involved in the negotiations for the enabling legislation, AB 2347. We have a vested interest in this program and we are eager to see it succeed. Many of the key players in the industry formed the Thermostat Recycling Corporation in 1998, long before this bill, demonstrating their commitment to the recycling of mercury-added thermostats. However, the impractical requirements of this regulation cannot be met and they will force an adversarial relationship between industry and the DTSC within the first year of the term of the regulations. This is poor public policy and it ultimately undermines the objectives California originally set out to achieve and that is the reduction of mercury thermostats entering our waste streams.

Solution

Given that the primary concern is our ability to achieve DTSC's proposed collection rates, we urge DTSC to work with CalRecycle and the State Auditor to complete a performance audit that would identify and evaluate current mercury collections through the universal hazardous waste program.

Mercury thermostats enter the universal hazardous waste stream are not accounted for in the DTSC thermostat regulations. Additionally, the data collected on universal hazardous waste is variable and a performance audit by the State Auditor or other government audit agency could provide recommendations to enhance data collection and provide reliable numbers that could be referenced in the ISOR and included in the proposed performance requirements. This information could then be used to help DTSC determine more realistic goals for this program. Without accounting for thermostats recovered from the universal waste stream, this program will not be able to clearly articulate success and manufacturers will be further exposed to unnecessary enforcement action.

DTSC should also create a more intrinsic connection between contractors, wholesalers, and manufacturers with shared responsibility throughout the chain-of-custody. While DTSC and AB 2347 lay out justification for an Enhance Producer Responsibility for recovery of mercury-added thermostats, the goals set forth are unattainable without clear requirements and responsibilities for contractors and wholesalers.

Johnson Controls, Inc., Lennox International Inc., Trane U.S., Inc., and UTC Climate & Controls, and Security, would like to thank DTSC for considering its comments on the revisions to formal draft regulations for Mercury Thermostat Collection and Performance Requirements. We look forward to additional changes in the draft regulation in the near future. We also look forward to playing a constructive role in the development and implementation of the Mercury Thermostat Collection and Performance Requirements.

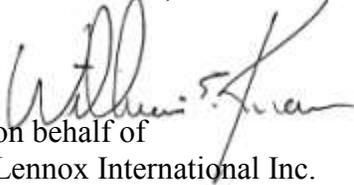

Sincerely,

on behalf of
UTC Climate, Controls & Security

RE: NEMA Comments on Proposed Regulations: DIVISION 4.5, TITLE 22, CALIFORNIA CODE OF REGULATIONS - CHAPTER 24. MERCURY THERMOSTAT COLLECTION AND PERFORMANCE REQUIREMENTS: Department Reference Number: R-2010-03

Dear Ms. Von Burg:

The National Electrical Manufacturers Association (NEMA) is the primary trade association representing the interests of the US electrical products industry. Our 400 member companies manufacture products, including thermostats, used in the generation, transmission, distribution, control, and end-use of electricity, constituting the very foundation of the worldwide infrastructure for supplying electrical power.

In 1998, three NEMA member companies – Honeywell, White-Rodgers, and GE – launched the Thermostat Recycling Corporation (TRC), a non-profit enterprise designed to facilitate recycling of mercury-added thermostats. The TRC now has more than 30 corporate members and is the only national program of its kind in the US (see www.thermostat-recycle.org). The TRC program has recycled more than 1.5 million mercury thermostats nationwide since its inception, thereby diverting nearly 7 tons of mercury from the solid waste stream.

NEMA appreciates the opportunity to comment on the proposed regulations referenced above. Our membership supports product stewardship and the formation of the TRC long before any legislative mandates concerning mercury thermostats were enacted testifies to that commitment. In general, NEMA supports state legislation that **complements and strengthens** our industry's proactive efforts to recycle thermostats over the past 15 years. We were therefore hopeful that the mandatory framework established by the Mercury Thermostat Collection Act of 2008 (AB 2347, Ruskin), would serve a sound basis for growing the program in California through collaborative efforts by manufacturers, state authorities, and other stakeholders, particularly the waste generators in the supply channel and other channel participants who provide collection points.

Regrettably, however, DTSC's proposed rule does not serve as a roadmap for a successful program. It is punitive more than supportive of the existing program, relies on flawed assumptions and limited understanding of thermostat installation and disposal channels, and sets a disturbing precedent for other product stewardship programs. We are particularly disappointed by DTSC's apparent decision to not propose collection rates that are capable of being carried out successfully.

NEMA's specific comments are as follows.

1. Determination of Thermostats Becoming Waste and Industry Performance Standards: §66274.4 - §66274.5

NEMA's principal concern lies with the overly ambitious Performance Standards manufacturers would be obligated to attain under the regulation, under threat of enforcement measures. These standards are problematic for the following reasons.

- **The proposed annual increases in the percentage collection rates have no precedent or historical basis in recycling programs and they are arbitrary.**

Section 66274.5 proposes a rapidly rising collection scenario over a very short period of time: a 30% collection rate in 2013, rising to 45% in 2014, and then further increments of 10% per year to 55% (2015), 65% (2016) and 75% (2017-2022). In aggregate units, collections of used mercury thermostats would increase from a base of about 20,000 in 2012 to 65,100 in 2013, then by an additional 30,000 to 95,000 in 2014 and another 20,000 units to 113,850 units in 2015. This represents an overall increase of nearly 100,000 units over a three year period. There is no precedent for anticipating that kind of behavior, and we note that compliance is in the control of waste generators who are not otherwise regulated except by a requirement to dispose of thermostats properly. As far as NEMA can tell, these incremental, rapidly rising percentages over a short period of time have been pulled out of the air. They are not feasible.

Reams of data and articles reveal that improvements in recycling behavior generally do not take place in large, annual, stepwise jumps over a handful of years such as those proposed by DTSC in Section 66274.5, and there is absolutely no precedent in experience for expecting that kind of growth. Improvements in recycling behavior occur gradually over a lengthy period of time.¹ We do know that appropriate incentives and facilitators can influence recycling behavior, and that legislation and regulation (if adequately enforced) can help motivate proper behavior by waste generators. But nothing in the documented performance of recycling programs generally, in California or any other state or in TRC's program, provides a basis for believing that the rapid incremental increases over a very short period of time, as proposed by DTSC (shown in the table below for 2013 through 2017) are capable of being achieved successfully.

¹ For example, it took 20 years for newsprint recycling to go from 35% to 73%.

<http://www.conservatree.org/paper/PaperTypes/newsoverview.shtml>. It took 33 years for the number of aluminum cans recycled to double from 27% to 54%.

<http://www.aluminum.org/Content/NavigationMenu/NewsStatistics/StatisticsReports/FactsAtAGlance/factsataglace.pdf>.

Glass bottle recycling has only reached about 25% after many years of recycling.

<http://earth911.com/news/2009/06/22/truth-about-glass-recycling/>. National plastic bottle recycling rate has remained steady at about 27% (2008) for a number of years, despite growing in volume each year,

<http://earth911.com/recycling/plastic/plastic-bottle-recycling-facts/> and increasing 0.8% from 2008 – 2009 to 27.8%.

<http://www.plasticsrecycling.org/news/news-archives/58-press-release/106-2009-us-national-post-consumer-plastic-bottle-recycling-report>. While California has apparently experienced recycling rates for consumer household disposables well above national figures because of its laws and long-term programs, the point is true for California as well: annual growth is gradual and occurs in small increments over a very long period of time.

<http://www.calrecycle.ca.gov/bevcontainer/Rates/BiannualRpt/12MonPeriod.htm>

Year	T-Stats Collected/Projected ²	Tstats Per 100,000	Annual % Growth
2008	7007	19	13%
2009 ³	7542	20	22%
2010	13,340	35	77%
2011	18,687	50	40%
2012 (P) ⁴	20,000	54	8%
2013 (P)	65,000	173	220%
2014 (P)	95,400	253	46%
2015 (P)	113,850	302	19%
2016 (P)	131,300	348	15%
2017 (P)	147,750	392	12%
2018 (P)	144,750	384	-2%
2019 (P)	140,250	370	-3%
2020 (P)	135,750	360	-3%
2021(P)	130,500	346	-4%
2022(P)	126,000	334	-3%

NEMA's experience in evaluating recycling behavior --- drawn from thermostat and battery and lamp programs ---- has shown there is typically a first-year “boost” effect following a legal mandate that waste generators recycle a particular product. Recycling tends to jump because there is a desire among many regulated parties to comply with the law. Improvement also occurs when recycling is made more convenient because the waste generators have access to recycling and the waste generators' time cost of recycling has been substantially reduced. Curbside collection and single stream recycling have greatly incentivized and facilitated household recycling of certain consumer materials, for example, but these strategies are not applicable to mercury-containing products. TRC's collection data from California and other states shows that triple digit and even high double digit growth occurs *only* in the earliest years of a program and/or where the thermostat collections show very low numbers: e.g., increasing thermostat collections by 600 from 300 to 900 in 1-year is a 200% increase; increasing thermostat collections by 600 from 13,200 to 13,800 in 1-year is a 4.5% increase. Furthermore, a “recycling rate” can jump up even though the number of collections of used product is stable (slightly up, slightly down, same), but the denominator represented by new material coming into the waste stream falls more significantly. This has certainly been the case in recent years in the case of newsprint and aluminum cans.⁵

What DTSC fails to account for is that the kinds of incentives and facilitators that prompt higher annual growth rates for thermostats have already been introduced in California for some time. TRC's program in California began in 2002 and grew modestly at first. The statute

² Counts of whole mercury-added thermostats—does not include mercury thermostat equivalents derived from loose mercury switches recovered by the program.

³ California's mandatory thermostat collection law became effective July 2009

⁴ (P) indicates projected. Data for 2008-2009 provided by TRC; the projection for 2012 is an estimate provided to NEMA from TRC based on collections to date; for 2013 and thereafter it is what is statutorily deemed “feasible” by Section 66274.5 of the proposed regulation.

⁵

<http://www.aluminum.org/Content/NavigationMenu/NewsStatistics/StatisticsReports/UsedBeverageCanRecyclingRate/UBCRecyclingRate.pdf>

that required contractors to begin recycling used mercury thermostats in 2009, and the distribution of wholesale collection points has been increasing since the law was enacted to the point where most of the early “access” gains have been achieved. DTSC cannot expect that these important stimulants of additional recycling of thermostats are going to have a big bang in 2013 and thereafter. California is now beyond baseline collections in very low numbers. The bang derived from the enactment of the law and its initial implementation has already occurred, and future improvements are going to be gradual at much lower percentages.

This fact is borne out by Thermostat Recycling Corporation’s data from other states where mandatory recycling has been enacted, including those with financial incentives, which have not had significant impact on recycling of thermostats.⁶ The more reasonable conclusion from the data is that California may see some increase in thermostat recycling in the next few years, but it will be relatively flat, slow growth. This is what is likely, reasonable to expect, and capable of being dealt with successfully .

Manufacturers have found that other policies not directly tied to recycling can have a temporary impact on the amount of thermostats recycled. The TRC has reported the experience of Maryland, where a substantial, but temporary increase in mercury thermostat collections occurred because of a state public policy initiative aimed at improving utilities’ demand-response capabilities. The program led to the removal and replacement of older, mercury switch thermostats with programmable models earlier than would have occurred in the absence of the Maryland demand-response program.⁷ There is no expectation at this time that California will adopt a similar program, which is the kind of event that might drive a sudden, albeit temporary jump in the recovery of used thermostats. That being the case, there is no basis for anticipating the rapidly rising collection scenario described in Section 66274.5.

NEMA also knows from lamp recycling that general economic conditions can cause the amount of recycling to decline significantly in a given year. We successfully demonstrated this phenomenon in Massachusetts for the recent years in which residential and commercial construction fell precipitously nationwide, leading to a wide divergence between what was projected to occur based on averages and what in reality occurred because of economic conditions. The DTSC has evidently made no allowance for the possibility of an impact of external economic conditions on its proposed collection targets, and this factor is just another reason that speaks to the wisdom of anticipating slower, gradual growth over time.

With respect to lamp recycling, NEMA regularly confers with the Association of Lighting and Mercury Recyclers (ALMR, see www.ALMR.org) concerning factors that influence lamp recycling behavior --- in ALMR’s experience, a key element, in addition to mandating recycling by waste generators, is law enforcement. This is relevant to thermostats because, like thermostats,⁸ the commercial/industrial sector is the largest generator of waste fluorescent lamps and that is where lamp recycling companies obtain the largest volume of waste lamps. ALMR members have advised NEMA about the initial positive impact a mandatory recycling

⁶ Thermostat Recycling Corporation’s comments in this rulemaking on the effectiveness of financial incentives to contractors shows that they are not effective in significantly inducing additional collections of mercury thermostats. NEMA incorporates those comments by reference.

⁷ See Thermostat Recycling Corporation’s more detailed explanation of this Maryland program in their comments in this rulemaking. NEMA incorporates them by reference in these comments.

⁸ In the case of thermostats, commercial contractors/technicians and property managers are the principal generators of waste units and thus constitute the primary target group for collection by wholesale distributors.

law typically has on those who want to comply with the law. But they primarily stress the importance of enforcement and note the significant increase in recycling observed in the commercial sector after the US Environmental Protection Agency brought two well-publicized enforcement actions.⁹ NEMA contends that enforcement of thermostat waste disposal laws in California would have a similar impact on recovery of used thermostats, but our experience is that States are reluctant to enforce these laws given limited budgets and resources.

- **The empirical evidence underlying the baseline estimate of the number of thermostats available for collection is insufficient.**

DTSC's methodology for determining how many thermostats are expected to become waste in forthcoming years is founded on one independent, non-peer reviewed study.¹⁰ This analysis (the SERA study), represents the only existing effort in California to determine a value that is continually changing and impossible to quantify with any reasonable degree of certainty. The study has not been replicated and more than anything illustrates the futility of seeking precision where it cannot be found. Specific problems with the SERA study are presented below.

a) "Self-assessments" are inherently unreliable

The SERA study employed a web-based survey to query a sample of California residences and businesses on the presence, quantity, and type of thermostats in the building, the age of the building and the year thermostats were installed, remodeling history, type of heating fuel used, as well as demographic and "firmographic" factors. These data were used to estimate the "*annual flow of thermostats into the market*," a key parameter for the sake of setting performance rates. The SERA study acknowledged that it could "not accurately project the share of these total thermostats that are mercury-containing."

As SERA concedes in a footnote: ". . . *the data used for this analysis is necessarily imperfect. It is based on **recall of current occupants**, some of whom have been in the location a long time, and some were newer*" (emphasis added).¹¹ While the data are somewhat consistent with state energy program data bases, the study's findings rest entirely on the ability of mostly untrained, non-technical homeowners to make the critical distinction between mercury and non-mercury thermostats. The latter category often includes mechanical, non-programmable thermostats that are very difficult to differentiate from mercury switch units, as shown in the photograph below.

9

¹⁰ "A Study to Meet Requirements for State of California Thermostat Recycling Legislation-Mercury-Containing Thermostats: Estimating Inventory and Flow from Existing Residential & Commercial Buildings," prepared for the Thermostat Recycling Corporation by Lisa A. Skumatz, Ph.D., Skumatz Economic Research Associates, Inc. (SERA), December 2009 (hereinafter "SERA Study").

¹¹ *ibid*, pg 18

The picture on the right shows both a mercury (Meridian) and non-mercury (Miller) thermostat. Without removing the covers, which respondents were not asked to do, it is easy to see how identification errors could occur.

b) The study findings were not sufficiently validated

Responses to the SERA survey on critical issues such as “*How many of each type (of thermostat) have been removed from the building,*” plus estimations on when they were installed or removed undoubtedly relied on speculation in many cases more than actual records. SERA, at the last minute at the request of DTSC, attempted to verify the integrity of the responses through field validation exercises, but they were admittedly “small scale” – constituting only 30 site visits restricted geographically to “the Bay Area.” A second “camera validation” study was conducted as well, but had not been completed at the time the study was released.

NEMA contends that the very small sample used for the validation study, coupled with the fact it was limited to a few, relatively homogeneous counties in Northern California, is an insufficient basis to conclude with respect to everyone who responded to initial survey that the “*self-reports were correct in the majority of cases.*” California is the largest, most diverse and most populous state in the continental US. It is not possible to affirm the findings of a statewide analysis through such a limited follow-up in a limited geographic area of the State.

The fact that the validation efforts, minimal as they were, uncovered errors in the self-reported survey values further underscores the need for more extensive verification measures.¹² Until those measures are implemented, NEMA strongly recommends against using the data collected by SERA as the basis for regulatory performance standards, particularly if they are inordinately high and enforceable against the regulated parties.

c) The SERA methodology cannot account sufficiently for changing market factors

SERA’s analysis is an estimation procedure based on a sample – it is not a census designed to produce an actual count of thermostats in place or entering the waste stream. The findings are therefore an estimated “snapshot” of a situation that is constantly changing and affected by numerous factors that the study does not address.

There is no allowance in the “estimated annual flow” figures, for example, for the potential impact of economic downturns.¹³ Sales of new heating systems and upgrades to programmable thermostats will decline in a recession, which in turn will lead to fewer older units entering the waste stream. Market conditions as severe as the recession of 2008-

¹² *Ibid*, pg 15

¹³ *Ibid*, footnote, pg 20

2009, in the midst of which U.S.GDP fell by nearly 9%,¹⁴ will greatly depress home improvement and commercial upgrade activities that result in thermostat replacements.

The principal outcome of the SERA study is paired, high-low estimates of the anticipated annual flow of mercury thermostats into the waste stream over a 25-year time horizon. Even without accounting for economic conditions, the high and low figures vary each year by more than 100%.

NEMA respectfully contends that the SERA study alone does not constitute a sufficient scientific basis for setting performance standards in a state regulation.

d) The SERA Report says nothing about the arbitrary collection rates proposed by DTSC.

The SERA report was solely designed to provide a methodology for estimating the flow of waste thermostats in California, and contains no information that DTSC can rely upon for the arbitrary, rapidly rising collection rates over a short period of time, which it has proposed in its regulation.

- **California's thermostat collection program has performed well to date**

California's thermostat collection program has been successful in comparison with other mandatory state programs. According to the TRC's 2011-2012 Progress Report, California's 4 year growth in the program's Mercury Recovery Index¹⁵ of 206% is 3rd highest among states with mandatory programs, far exceeding those of Maine (25%) and Vermont (128%), which are often portrayed as model state programs because they feature "bounty" payments to HVAC contractors.¹⁶

California's success is also apparent when measured by the rate of growth of thermostats collected per 100,000 residents. The contention that the number of mercury thermostats collected per 100,000 population is higher in a couple of states such as Maine and Vermont than the collections proposed by DTSC for California is true, but it is readily explained by factors that are not applicable to California. In fact, the baseline number of mercury thermostats per portion of the population **should be expected** to be much higher in these two states than in California for a variety of reasons.

Oil heating systems, for instance, are widespread in New England states yet almost nonexistent in California, and fuel oil systems are far more likely to be controlled by mechanical, mercury switch thermostats. Homes in northern New England do not use air conditioning units, and electronic thermostats are more common when air conditioning is available, as in California. In addition, California's early transition to electronic programmable thermostats was greatly accelerated by the California Building Standards Code (Title 24), which has no counterpart in Maine or Vermont.¹⁷ Installations of mercury switch thermostats in new construction in California virtually ceased in the early 1990s.

¹⁴ See <http://www.tradingeconomics.com/united-states/gdp-growth>

¹⁵ The Mercury Recovery Index tracks the growth in the quantity of mercury recovered through the TRC measured against a base year quantity.

¹⁶ Keeping Mercury out of the Waste Stream – One Thermostat at a Time: 2011-2012 Progress Report, the Thermostat Recycling Corporation, pg. 13. Available at <http://www.thermostat-recycle.org/files/media/20120808125856.pdf>.

¹⁷ Peffer et al, *How people use thermostats in homes: A review*. 46 Building and Environment 2529, 2533 (2011)(showing that California has 33% more homes than national average *without thermostats*, and of homes with thermostats California

Due to these and many other factors, it is not surprising that the number of mercury thermostats collected per 100,000 residents is higher in two northern New England states than in California. This baseline difference will be reflected in collections data in a given year. Comparisons of state programs that fail to take these key factors into account are therefore misleading.

DTSC has undertaken no analysis to determine whether its comparison to Maine or Vermont is justifiable or not. This requires a thorough examination of whether the conditions being measured are comparable and, if they differ, determining what adjustments to the measurement are therefore appropriate based on the magnitude of the differences. DTSC is apparently satisfied, without any analysis whatsoever, that its proposed measurement for thermostat collections is a “modest” discount¹⁸ compared to Maine or Vermont, but the factors differentiating Maine and Vermont from California cited above are so great and so significant they plainly warrant a much more significant discount in the case of mercury thermostats in California.¹⁹

DTSC’s effort to justify its proposed percent collections based on collection data from Vermont, Maine, and Maryland constitutes a “*foundation of a rule that [is] premised upon, or derived from, empirical data or other scientific findings, conclusions, or assumptions establishing a regulatory level, standard, or other requirement for the protection of public health or the environment.*” That being true, there is a legal requirement that the comparison be subject to peer review under California Health & Safety Code §57004, and DTSC has provided for nothing to be peer reviewed on this subject.

This is important for the following reason. DTSC has selected a baseline of the purported number of thermostats becoming waste each year from the SERA Report, which has its limitations as noted above. DTSC then applied arbitrary, rapidly rising percentage collection rates to this number, which we have explained have no historical precedent. This led to the mandated number of mercury thermostats to be collected between 2013 and 2022. As apparent justification for applying arbitrary collection rates to a baseline that may not be accurate, DTSC purports to standardize the number of thermostats to be collected in terms of thermostats collected per 100,000 residents. This metric is then employed as the basis for comparing the proposed rates to performance of programs in three states without any consideration whatsoever to the differences or similarities between those jurisdictions and how to measure the impact of those differences. As noted above, those differences are very, very substantial. This exercise is a house of cards.

was 50% higher than national average in use of programmable thermostats that do not contain mercury. “The percentage of houses in California without thermostats differs from the national percentage due to milder weather, whereas the increased number of programmable thermostats in California versus nationwide is likely attributed to the last 30 years of energy code requiring setback or programmable thermostat. Of those that used central air conditioning in California, 68% had programmable thermostats; this most likely reflects the fact that homes built in the last 30 years were more likely to have central air conditioning.”)

¹⁸ DTSC, Initial Statement of Reasons at 11 (DTSC Control Ref. No. R-2010-3).

¹⁹ NEMA has received a copy of the comments that Thermostat Recycling Corporation is submitting in this rulemaking, and we note that TRC has made some additional factual points about the differences between Vermont and Maine, on the one hand, and California. NEMA incorporates by reference TRC’s comments on this subject, which are supportive of NEMA’s point. Similarly, we have already noted above that the other state cited by DTSC at footnote 10 of its Initial Statement of Reasons on this point --- Maryland --- had a unique circumstance that drove substantial thermostat collections that would not have ordinarily occurred but for the event that was described earlier. There is no expectation that this will occur in California at this time. NEMA incorporates TRC’s comments and data on Maryland as well.

- **The exorbitant performance standards included in the regulation as performance requirements rest on flawed assumptions of compliance behavior**

To stay in compliance with the proposed regulation, manufacturers would need to increase thermostat collections by an estimated 220% in 2013 (based on TRC's anticipated collections in 2012), followed by 46% the second year, ultimately reaching an aggregate increase of **2000%** in five years. These collection rates result from the "house of cards" calculation described earlier, which all experience suggests will put force manufacturers into default instantly.

In this regulation, DTSC clearly does not propose a systems approach to achieving its public policy objective.²⁰ The underlying statute, however, clearly outlined the actors in the waste thermostat collection *system* who are critical to its successful implementation insofar as it recognizes that

- (a) waste generators (*i.e.*, installers, technicians, contractors) are legally responsible for taking the used thermostat out of service and ensuring that it placed in the alternative waste stream,
- (b) wholesalers provide the collection point for waste generators to bring the used thermostat, thereby serving as "convenience facilitator" and ensuring access by generators, and
- (c) manufacturers must sponsor the program, generating awareness and minimizing economic costs to the generator.

The aggressive thermostat collection rates proposed in the rule presupposes that there will be **substantial compliance** by the other actors in the waste collection system, outside of the control of manufacturers, in fulfilling their responsibilities under the statute.

The regulation fails critically in this respect, however, by not assigning any channel participant accountability prior to the manufacturer sponsored program receiving the waste thermostats. Without regulatory accountability and enforcement for the other channel participants, the collection system is not optimally designed to achieve collection rates, whether the unattainable rates proposed by DTSC, or even more modest rates. It is logically inconsistent with the statute that clearly acknowledges that parties at each stage of the process have important responsibilities that DTSC would do nothing to ensure that those other parties are accountable, particularly where those other parties are going to be more influential than the manufacturers in influencing behavior.

In setting collection rates, DTSC failed to incorporate incentives and facilitators contained in the underlying statute, thereby placing very real limitations on the feasibility of the proposed rates. The rule places no requirements on employers of contractors, technicians, and installers of HVAC equipment to educate their employees or stress that their employment depends on compliance with the law. There is no indication that the state plans to bring enforcement actions against contractor/technicians who fail to return mercury thermostats to a wholesaler with a collection bin. Absent a system of shared responsibility, for all in the supply

²⁰ DTSC, Initial Statement of Reasons at 8 (DTSC Control Ref. No. R-2010-3).

chain as well as public authorities, the overall structure of the incentives and facilitators for thermostat recycling in California is simply not conducive to anything approaching the kind of arbitrary collection rates proposed by DTSC.

NEMA therefore urges DTSC to revise the collection rates downward to levels that are capable of being successfully achieved for the following reasons:

- The rapidly rising collection rates over a short period of time reflected in the proposed regulation are contradicted by all data --- from recycling programs generally in California, in other states, and TRC's mercury-thermostat program. They don't reflect the gradual nature of changing waste generator behavior that has been documented with all other recycling programs. They don't reflect the fact that this is not the first year of implementation of the Mercury Thermostat Collection Act of 2008, but it is already the 4th year and 2013 will be the 5th year. The incremental percentage gains that tend to ensue after a legislative mandate or when collection numbers are low have already occurred.
- DTSC cannot expect to see anywhere near the recovery of thermostats per hundred thousand population in States where mercury thermostats are far more prevalent than in California or where a special policy temporarily inflated the removal and collection of mercury thermostats. If DTSC continues to make that justification, DTSC will need to undertake an extensive peer-reviewed analysis of the differences with other states and quantitatively substantiate how those differences relate to what is feasible in California.
- DTSC must acknowledge the fact that its proposed rule does not optimize the collection of mercury thermostats from waste generators who are responsible for recycling, because DTSC has not incorporated regulatory accountability or contractor/technician/employer education into all the key points in the collection system, and has not included shared responsibility into the overall system so that more logical, reasonable collection rates can be able be attained successfully.
- DTSC must acknowledge that the SERA Report contains only limited verification of its statistical analysis --- limited in number of persons contacted and limited to a homogenous geographic area that does not reflect the diversity of California, and what little verification was accomplished in a short period of time suggests the number of thermostats becoming waste may be lower than what the statistical analysis would suggest.

2. DTSC's projection of benefits from this rule is overstated and has no empirical support.

In accordance with California Government Code section 11346.3(b), DTSC presented a description of anticipated benefits to accrue from promulgation of the proposed regulation.²¹ The department references OEHHA's inventory of fish consumption advisories for CA waterways due to potential mercury contamination as the basis for benefits of this rule. But they offer no evidence whatsoever that would connect the prevalence of CA waterway advisories to recycling higher numbers of mercury thermostats. The relationship is simply implied – *i.e.*, exposure to mercury in

²¹ INITIAL STATEMENT OF REASONS, Mercury Thermostat Collection and Performance Requirement Department of Toxic Substances Control; Reference Number: R-2010-3, Office of Administrative Law Notice File Number: Z-2012-0807-05, pg 3-4

the environment is potentially harmful; thermostats contain mercury, therefore recovering more thermostats from the waste stream will necessarily reduce harm to the population.

In fact, thermostats are undoubtedly far down the list of factors that could affect blood mercury levels in CA residents due to fish consumption. OEHHA's web site notes that

*“Mercury, a metal, is **widely found in nature** in rock and soil, and is washed into surface waters during storms. Mercury evaporates from rock, soil, and water into the air, and then falls back to the earth in rain, often far from where it started. Human activities redistribute mercury and can increase its concentration in the aquatic environment. **The coastal mountains in northern California are naturally rich in mercury in the form of cinnabar ore, which was processed to produce quicksilver, a liquid form of inorganic mercury. This mercury was taken to the Sierra Nevada, Klamath mountains, and other regions, where it was used in gold mining. Historic mining operations and the remaining tailings from abandoned mercury and gold mines have contributed to the release of large amounts of mercury into California's surface waters.** Mercury can also be released into the environment from industrial sources, including the burning of fossil fuels and solid wastes, and disposal of mercury-containing products.”* (emphasis added)

The extensive and long-lasting wildfires of recent years are clearly another significant source of mercury in the environment in California. Wildfires release mercury contained in soil and plant matter, where it accumulates as a result of natural and industrial processes worldwide, the latter primarily being coal-fired utility plants. An average of 3.4 tons of mercury was estimated to be released in CA each year by vast wildfires between 2002 and 2006, more than any other state except Alaska.²² In addition to domestic California sources of mercury, there are also international sources.²³

OEHHA also admits on its website that mercury poisoning from fish consumption is virtually nonexistent in California.

“No case of mercury poisoning has been reported from eating California sport fish. The levels of mercury in California fish are much lower than those that occurred during the Japanese outbreak. Therefore, overt poisoning resulting from sport fish consumption in California would not be expected. At the levels of mercury found in California fish, symptoms associated with methylmercury are unlikely unless someone eats much more than what is recommended or is particularly sensitive. The fish consumption guidelines are designed to protect against subtle effects that would be difficult to detect but could still occur following unrestricted consumption of California sport fish. This is especially true in the case of fetuses and children.”

NEMA concurs that mercury-containing products should be handled appropriately at end of life, which is why three NEMA member companies voluntarily instituted the TRC in 1998 and now operate it nationally. Proper handling and disposal can in fact prevent mercury in the products from ultimately being released to the environment in some form, fashion, and time frame. So while there are some benefits and substantial costs from recycling mercury thermostats, the benefits are **not** the benefits cited by DTSC.

DTSC presents no model of how and where mercury emanating from thermostats disperses, accumulates in the California environment, and ultimately contributes to fish consumption advisories or elevated mercury blood levels in Californians. Thus there is no basis for demonstrating that collecting more thermostats will somehow reverse these phenomena.

There are, in other words, **no measurable benefits** associated with this rule to offset the considerable cost to NEMA members and other companies that once supplied thermostats to the market. The Department has produced no quantitative statement of benefits aside from estimated

²² http://www.nsf.gov/news/news_summ.jsp?cntn_id=110320

²³ <http://www.nytimes.com/2006/06/11/business/worldbusiness/11chinacoal.html?pagewanted=all& r=0>

quantity of mercury that *could be* diverted from the state's waste stream if the rule is adopted and the program succeeds in capturing the full quantity of mercury thermostats that DTSC estimates are still in use. The question of how and to what extent this diversion will manifest in terms of health and environmental impacts is not addressed. DTSC has therefore not satisfied its obligation under California Government Code Section 11346.3(b) to assess "*the benefits of the regulation to the health and welfare of California residents, worker safety, and the state's environment.*"

3. DTSC has underestimated compliance costs associated with the proposed rule

DTSC conducted an economic impact assessment of this proposed rule, as required by Government Code section 11346.3. The department concluded that "*the regulation would require thermostat manufacturers operating a collection program an estimated \$ 2,916,638 over the next 10 years.*"²⁴ No information is given to explain how this figure was determined.

In an earlier version of this proposed rule, as well as through discussions with NEMA and other industry representatives, DTSC has indicated that failure to achieve the performance standards could compel the department to impose a financial incentive, or "bounty" requirement on manufacturers.²⁵ As discussed above, a financial incentive mechanism is in place in two states (VT and ME) and **has not** stimulated significant incremental collections. We assume DTSC, by its calculation, has not undertaken any evaluation of whether it would require revisions in the manufacturers' program pursuant to Cal. Health & Safety Code §25214.8.17(b), because if DTSC did contemplate revisions, for example, that included a financial incentive (see Initial Statement of Reasons at page 8 discussing definition of "incentive"), this rule would become a "major regulation" under Cal. Health & Safety Code 57005 and require DTSC to consider whether there is a less costly alternative or combination of alternatives which would be equally as effective in achieving increments of environmental protection in a manner that ensures full compliance with statutory mandates.

Because the performance standards proposed in the rule are for all intents and purposes unattainable, NEMA assumes that its members (and other thermostat manufacturers) will be judged noncompliant as early as 2014, the year after the first year of the proposed percent collection rates go into effect, and DTSC should now consider this to be a major regulation and undertake the required analysis. One of the outcomes of that analysis will likely be a substantial re-evaluation of the arbitrary collection rates in the proposed rule and a reduction in those rates to levels that are feasible in order to "ensure full compliance with the statutory mandates." Cal. Health & Safety Codes §57005.

²⁴ DTSC Notice: 45-DAY PUBLIC NOTICE AND COMMENT PERIOD, *Mercury Thermostat Collection and Performance Requirement*; Department Reference Number: R-2010-03; Office of Administrative Law Notice File Number: Z-2012-0807-05; issued Aug. 16, 2012; pg 6

²⁵ The underlying statute requires industry collection programs to include "*incentives and education*" to contractors and other parties to encourage them to recycle out-of-service thermostats, but is silent on the question of what form the incentives should take.

Moreover, as noted earlier, DTSC has failed to document any measurable benefits that would result from this rule, aside from generalized claims that it would prevent a quantity of mercury from entering the environment. There is no discussion of how, even if this were true, it would result in fewer fish advisories, less consumer exposure, or improved public health.

NEMA is also concerned that compliance costs will not be imposed on all past sellers of mercury thermostats into the CA market. NEMA is aware of at least one company²⁶ that has not joined the TRC and, to our knowledge, has not completed the survey plan and methodology required under Sec. 25214.8.18 of the statute.²⁷ In addition, Companies that sell thermostats through the mail (internet) are required under Sec. 25214.8.14 of the law to alert purchasers and facilitate mail-back disposal of used thermostats with each sale, but NEMA is not aware of DTSC efforts to enforce this requirement.

Finally, NEMA is distressed by the uncertain time-horizon for implementation of and compliance with this regulation. DTSC surely is aware that companies plan their corporate strategies and establish financial plans and budgets based on expectations of market conditions, government action, consumer trends, and other factors. This proposal includes a performance standard for 2013, but it appears unlikely the rule will be finalized before the end of 2012. Manufacturers are therefore unable to incorporate their expected compliance burden into financial projections and budget accordingly.

Thank you for your consideration of these comments.

Sincerely,

Kyle Pitsor

**Regarding: DTSC Proposed Regulations for Mercury Thermostat
Collection and Performance Requirements**

Dear Director Raphael:

The Product Stewardship Institute, Inc. (PSI) is pleased to support the proposed regulations for California's 2008 Mercury Thermostat Collection Act, the *Mercury Thermostat Collection and Performance Requirements*, released for public comment on August 17, 2012.

PSI a national environmental institute with membership from 47 states, including California, over 200 local governments, and more than 75 companies, organizations, universities, and non-U.S. governments.

PSI supports the methodology established by the California Department of Toxics Substances Control (DTSC) to determine the number of mercury thermostats available for collection, which sets the basis for a baseline collection rate. This methodology is the same one developed by the Thermostat Recycling Corporation's (TRC) own consultant (Skumatz Economic Research Associates).

PSI also supports the performance requirements proposed by DTSC, which are based on a *conservative* estimate of the number of mercury thermostats available for collection in California. Given that the number of mercury thermostats in use are declining each year, particularly as replacements for energy conservation increase, we need strong collection targets in the near term to capture the remaining mercury thermostats. The 2017 collection requirement also aligns with the state's overall goal to reduce, recycle, or compost 75 percent of solid waste generated statewide by 2020.

Product Stewardship Institute, Inc. • 29 Stanhope Street • 3rd Floor • Boston, MA 02116
Telephone: (617) 236-4855 • Fax: (617) 236-4766 • www.productstewardship.us

 Non-chlorine Bleached / 100% Post-Consumer Recycled Paper / Soy Ink

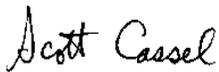

The Product Stewardship Institute is an equal opportunity provider and employer.

PSI also supports DTSC's clarification of the term "incentive" to include "a cash payment or provision of a coupon, discount, or rebate." Financial incentives have proven successful in Maine and Vermont, the only two states with EPR laws for mercury thermostats that require that thermostat manufacturers offer a \$5 per thermostat collection incentive. The 2010 collection rate in Maine (540 mercury thermostats per 100,000 population) and Vermont (517 mercury thermostats per 100,000 population) are among the highest collection rates in the country, and are above the 75 percent collection rate proposed for California. If TRC does not meet the performance requirements in a given year, DTSC can require TRC to offer a financial incentive to increase thermostat collection.

In addition, PSI supports DTSC's requirement that TRC report data in its annual report on thermostat collections from states with EPR laws. However, PSI also recommends that DTSC require TRC to report state-by-state data on thermostat collection *from all states*. As stated in the Initial Statement of Reasons, DTSC will need access to state-specific data to assess its performance against those states with and without EPR laws. Through its national voluntary program, TRC already compiles state-specific data on thermostat collections, although TRC currently does not make this information public.

We commend DTSC's diligence on this issue and encourage you to finalize the regulations in a timely manner. This process has fallen behind the timeline set in the 2008 law that required collection rates to be established by January 1, 2012. According to its annual report, TRC collected 19,927 mercury thermostats in California in 2011, which captured only between 4.1 – 8.5 percent of the number of mercury thermostats becoming waste for that year. Therefore, we hope that the regulations will be finalized soon so that TRC can focus on improving its collection efforts in the state.

Sincerely,

Scott Cassel

To: Algazi, Andre@DTSC
Subject: Hg T-stat Peer Review

Andre,

Are you able to share the questions DTSC asked the peer-review?

Also have you seen this study indicating that 19% of households in California did not have any thermostats. The study: http://eec.ucdavis.edu/publications/How_people_use_thermostats_in_homes.pdf could help inform the denominator used in this regulation. This study also notes the differences in California, explaining why there are less thermostats in California on a percentage basis than the Northeast states often referenced in this proceeding.

Although programmable thermostats have been available for more than 30 years, only 30% of U.S. households have installed them. In the 2005 RECS, 14% of U.S. households reported having no thermostat, 30% (34.6% of thermostat owners) had a programmable thermostat, and 56% had a manual thermostat [1]. According to the AHCS, 36% of households had programmable thermostats in 2004, and the percentage increased to 42% in 2008 [28]. In California, the 2005 RECS reported 19% of households with no thermostat, 44% (54% of thermostat owners) with a programmable thermostat, and 37% with a manual thermostat [24]. The percentage of houses in California without thermostats differs from the national percentages due to milder weather, whereas the increased number of programmable thermostats in California versus nationwide is likely attributed to the last 30 years of energy code requiring a setback or programmable thermostat. Of those that used central air conditioning in California, 68% had programmable thermostats; this most likely reflects the fact that homes built in the past 30 years were more likely to have central air conditioning (Fig. 5). Another

It is also important to note the California Energy Commission regulations on “setback thermostats” starting in 1978 and further defined again in 1992, drastically reduced the number of mercury-added thermostats entering commerce. My understanding is that roughly 95% of setback thermostats did NOT contain mercury. In that light other regulatory efforts on energy efficiency did a lot to curb the use of these products well before the 2006 ban.

I was hoping over there would be a way of looking at this additional information. Is there a process for this?

Thanks,

Mik

Re: DTSC's "Mercury Thermostat Collection and Performance Requirement (August 2012) Division 4.5, Title 22, California Code of Regulations, Chapter 24"

Dear Ms. Von Burg:

Thermostat Recycling Corporation (TRC) appreciates the opportunity to provide comments on the proposed Mercury Thermostat Collection and Performance Requirement (August 2012) Division 4.5, Title 22, California Code of Regulations, Chapter 24 (hereafter referred to as the "Proposed Regulations"). We ask that TRC's comments and all of our attachments that accompany these comments be included in the rulemaking file, along with all other comments, in accordance with Government Code §11347.3(b)(6).

TRC is a non-profit membership organization that facilitates the collection and proper disposal of mercury-added thermostats. Today thirty-one manufacturers support the program nationally. TRC's collection network includes over 3,000 HVAC wholesale distributors, HVAC contracting businesses, local governments, and thermostat retailers. Nationally, TRC has recovered over 1,500,000 million mercury thermostats, keeping nearly seven tons of mercury out of solid waste. On behalf of its members that historically branded mercury-added thermostats sold in California, TRC has been and is implementing the collection program required to comply with the Act. TRC provides these comments from the perspective of an entity that actually implements a thermostat collection program every day, and has 15 years of practical knowledge in doing that.

TRC has made significant progress expanding its program and increasing collections of mercury thermostats in California since the enactment of AB 2347. In the intervening thirty-eight months, access to the program (represented by collection bins located with wholesalers) has increased by over 300% and the collection of mercury-add thermostats by TRC have increased by 167%. TRC now recovers more mercury-added thermostats in California than any other state in the United States.

TRC and the thirty-one manufacturers supporting its program in California and forty-seven other states are committed to implementing a recycling program that achieves meaningful environmental results. TRC's goal is to collect and properly dispose of as many waste mercury thermostats as practicable. TRC and its members encourage the development of public policies that complement and enhance its recycling program. In fifteen years of national operations TRC determined the most successful thermostat recycling programs embody the concept of shared responsibility. Achieving high collection rates requires the participation, support, and accountability among all supply channel participants.

TRC believes the regulation proposed by DTSC will not enhance its program in California, and some aspects of the proposed regulation will in fact have a deleterious effect on recycling of mercury thermostats in California.

- First, the empirical basis for establishing the performance requirements (percent rates) is nowhere to be found in the Initial Statement of Reasons. DTSC has not demonstrated the proposed collection rates will likely be attained, certainly in the short-period of time mapped out by DTSC in the proposed regulation. All experience indicates that they will not be. As such, TRC sees no reasonable pathway for manufacture compliance with the performance requirements that are not feasible.
- Second, TRC fears the reporting requirements in the proposed regulation will deter desired recycling behavior and likely lead to greater non-compliance with both the disposal ban and contractor requirements to recycle.
- Finally, the proposed regulation critically fails to provide for channel participant accountability and that will have an impact on program performance.

TRC has additional detailed comments (see attachment to this letter) on these and several other key issues that we believe the State must address in developing a regulation that will enhance program outcomes in a meaningful way.

Finally, TRC urges the Department to be mindful of impacts of this regulation beyond its borders. It is well understood mercury pollution is a national issue. TRC's mercury thermostat program is a national program. In an attempt to achieve the unachievable in California, TRC fears it will be compelled to withdraw resources from programs in other States where they may be more effective in terms of reducing mercury.

Please feel free to contact me (mark.tibbetts@thermostat-recycle.org) if you have any questions or require clarification on any areas of our comments.

Sincere Regards,

Mark R. Tibbetts

Attachment: Specific Comments of Thermostat Recycling Corporation (TRC) on DTSC's Mercury Thermostat Collection and Performance Requirement (August 2012) Division 4.5, Title 22, California Code of Regulations, Chapter 24"

Attachment 1

Specific Comments of Thermostat Recycling Corporation (TRC) on Mercury Thermostat Collection and Performance Requirement (August 2012) Division 4.5, Title 22, California Code of Regulations, Chapter 24”

I. The Empirical Basis for Establishing the Regulation’s Proposed Performance Requirements is Flawed.

TRC’s experience in operating thermostat collection programs in 48 states brings a considerable appreciation for how different statutory/regulatory regimes (disposal bans and recycling mandates vs. no regulation at all) and market and energy regimes and demographics impacts collection of mercury thermostats. None of this experience is reflected in DTSC’s Initial Statement of Reasons.

First, the proposed regulation’s annual “percent rate” in Section 66274.5 over a ten year period from 2013-2022 is set initially at 30% and then increases by 15% to 45% in 2014, by 10% per year to 55% (2015), 65% (2016), and 75% (2017 – 2022). The “percent rates” are not based on any experience that would suggest what kind of annual increase (if any) is reasonably likely to be attained. They are arbitrary round numbers that increase in large annual increments over a very short period of time that have been arbitrarily inserted into the regulation. DTSC has provided no analysis of whether such percentage increases have any basis in experience or whether they are contradicted by experience. Since the feasibility of the rising annual percentage rates cannot be empirically justified based on any experience, DTSC indirectly attempts to justify the number of thermostats that might be collected in terms of those rates through comparison to TRC’s collection in a limited number of other states by normalizing thermostat collections on the number of mercury thermostats collected per 100,000 population. DTSC’s analysis of the “comparables,” however, is non-existent. The DTSC’s Initial Statement of Reasons is devoid of any facts or analysis of how the “comparable” states (Maine, Vermont, and Maryland) are similar to or different than California. In fact, they are very different. In relying on comparables, it is standard practice that if no comparable can be found, some effort and analysis to explain the differences would be undertaken that would support a premium or discount from the results of the measurement that is being compared. DTSC has not done that.

A. DTSC Undertaken No Analysis of the Comparable States to Justify its Percent Rates

DTSC attempts to justify its proposed percentage mercury thermostat recovery rates based on per capita mercury thermostat recovery rates in two New England states, Maine and Vermont. Noting that these two small states are able to collect >500 thermostats per 100,000 population, DTSC concluded that because its proposed performance requirements did not exceed 392 per 100,000 population the proposed performance requirements for California were quite “modest.”¹ The percentage rates proposed in Section 66274.5 over ten years yields an average per-capita collection per 100,000 population of 326 per year, with a range of 173 per 100,000 to 392 per 100,000. Without explaining why or providing any data in support of its claim that California’s

¹ DTSC, Initial Statement of Reasons at 11, n.10.

requirement is “modest,” TRC respectfully points out that “modesty” is a legally insufficient basis for justifying a comparable. Essentially what DTSC has done in its claim of modesty is to conclude that it can discount California’s projected performance on average 40% (326/540) off of Maine and Vermont’s collection performance. If the DTSC is making such a discount, it should say so and provide the specific reasons why that number and not some other number makes sense. This is standard practice in justifying a result when making comparables. Due to radical differences between the demographics and weather, the building and energy infrastructure, and the marketplaces in Maine, Vermont and California, a substantially deeper discount is warranted off the Maine and Vermont comparables, and TRC submits that it would be well over 85%.

For the reasons explained below, TRC respectfully disagrees with DTSC’s assessment and recommends that DTSC substantially revise its percent rate performance requirements downward. Simply because the program achieved certain per capita rates in one state (Maine or Vermont) does not mean it can achieve specific discounted results in another very different state (California), unless DTSC can establish that conditions among the states warrant that specific discount. Otherwise, DTSC is setting rates based on guesswork without substantial evidence. If DTSC is going to undertake that analysis, TRC suggests DTSC account for 1) differences in the historic and current installed base of mercury-added thermostats in northern New England and California; 2) the impact of specific time limited programs or market changes on collections; and 3) the fact actual program performance (year-to year growth) between Maine, Vermont and California is not dissimilar.²

To illustrate this point, TRC refers DTSC to data compiled by the U.S. Census and U.S. DOE’s Energy Information Agency, Residential Energy Consumption Survey (RECS)³ and other sources to illustrate the substantive differences in the historic and current installed base of mercury-added thermostat between the two northern New England states cited in the Statement of Reasons and California.

For instance:

- In Maine fuel oil heats 70- 80% of homes and 59% in Vermont, while the use of fuel oil is almost nonexistent in California.⁴ This is meaningful as mercury-added thermostats were the most commonly used thermostat to control oil furnaces. Additionally, unlike the replacements of other heating systems, replacing an oil furnace/boiler with another oil furnace/boiler often does not necessitate a new thermostat, meaning many older mercury-added thermostats remained in service and are only now being replaced.

² TRC asserts that DTSC’s comparables analysis, when completed, will have to be externally peer reviewed pursuant to Cal. Health & Safety Code §57004.

³ Residential energy consumption survey 2009: Housing characteristics tables. Energy Information Agency. Available from <http://www.eia.gov/consumption/residential/data/2009/>.

⁴ U.S. Census, Historical Census of Housing Tables, House Heating Fuel. Available at: <http://www.census.gov/hhes/www/housing/census/historic/fuels.html>.

- A study conducted for the Vermont Department of Public service indicated, “statewide three out of four (71%) of owner-occupied homes and about four out of five (79%) of rentals have manual thermostats (e.g. non-programmable thermostats).”⁵
- Less than 17% of homes in New England use central air-conditioning.⁶ In contrast, 40% of homes in California use central air-conditioning and of those homes, 68% have programmable thermostats (vast majority of which are electronic and do not contain mercury due to Title-24 requirements).⁷
- Maine and Vermont have dissimilar building codes. There is no equivalent of California’s Title-24 in Maine and Vermont. Thirty years of California’s Title 24’s requirement for the installation of set-back or programmable thermostats radically transformed the market away from mercury thermostats in California ahead of other sections of the country.⁸ Mercury-added thermostats were never installed in many California homes.
- A recent study, citing federal Energy Information Agency data for 2005, revealed that California has over 33% more homes without thermostats than the national average and, for homes that do have thermostats, California has almost 50% more homes with electronic programmable thermostats than the national average.⁹

With respect to the first point, DTSC should consider the impact of market trends and other policy measures on collection rates in Maine. TRC notes a recent article in the *Portland Press Herald* indicating fuel oil consumption in Maine declined by half between 2004 and 2010¹⁰. The article noted many homeowners are replacing older oil furnaces with new higher efficiency equipment due to high fuel oil prices.¹¹ This stimulates thermostat replacement in Maine at a rate that California will not replicate, because of the radical infrastructure, energy policy, and demographic differences in California from Maine.

Similarly, DTSC cited TRC’s “per-capita” collections in Maryland, but ignored the fact that an exogenous regulatory event temporally stimulated replacement of thermostats in Maryland and there is no expectation that a similar regulatory event will occur in California. From 2009 to 2012, TRC recycled nearly 70,000 mercury-added thermostats removed from service through the

⁶ The percentage is likely lower in Maine and Vermont as this includes data from Rhode Island and Connecticut; two southern New England states that are warmer climatically, more suburban, and are more wealthy.

¹¹ *Id.*, Another article from the Bangor Daily News notes that the number of conversions from oil to gas in the Bangor area of Maine has increased substantially since 2008.

<http://bangordailynews.com/2012/09/23/business/more-homeowners-cooking-heating-with-bangor-gas/>

implementation of a demand response program by Baltimore Gas and Electric (BGE).¹² BGE offered free set-back/communicating thermostats and discounts on utility bills in exchange for allowing the utility to adjust the thermostat during periods of peak demand. The program was funded by ratepayers. To date over 300,000 BGE customers have participated in the program.

The contractor for BGE’s program, Honeywell Utility Solutions, (HUS), offered participants free recycling of all mercury-added thermostats removed from service and subsequently arranged transport using TRC’s recycling bins. As a result, TRC achieved very high collection rates in Maryland during the three years this program operated (see Table 1.1). The BGE program has subsequently scaled down and TRC projects 2012 collections in Maryland similar to the collections achieved prior to BGE program in Maryland.¹³ TRC points out the Initial Statement of Reasons overlooked the unique and transitory nature of the Maryland program and that the high collection rates in Maryland have not been sustained.

DTSC should consider the likelihood of a demand response program being implemented in California between 2013 and 2022. TRC notes that even if a program were implemented, there is still no guarantee TRC would enjoy similar outcomes in California. TRC benefited from its existing relationship with Honeywell International, Inc., who was contracted to establish and manage the BGE program. Likewise, the BGE program emphasized thermostats as opposed to an outdoor switch installed on the air-conditioner increasing the number of thermostats recycled in Maryland. Moreover, there are likely more mercury-added thermostats in service in Maryland for many of the same reasons mentioned such as no Title-24 requirements.

Table 1.1: Thermostat Collections Maryland

Year	Maryland Collections	HUS Share	Maryland Collection less HUS Share	Thermostats per 100,000 population w/ HUS	Thermostats per 100,000 population w/out HUS
2007	8,765	-	8,765	150	150
2008	10,207	-	10,207	175	175
2009	36,622	27,722	8,900	628	153
2010	43,489	32,624	10,865	746	186
2011	23,709	8,735	14,974	407	257
2012*	15,000	565	14,435	257	248

* Projected

B. California’s Growth Projections Derived from the Proposed Percent Rate Collections in the Regulations Are Not Empirically Sanctioned

¹² Legislation, passed in 2008, required the Maryland’s electric utilities to achieve a 15% reduction in per capita peak demand by 2015, compared to 2007 levels. Most utilities opted to use thermostats to control peak demand

¹³ Other utilities offered programs similar to BGE and TRC has made similar arrangements with their contractors. Some of these programs remain active and continue to contribute to TRC’s performance in 2012.

Finally, while the per capita collection rates will differ substantially between northern New England and California, program performance as measured by growth is not dissimilar. TRC refers to Table 1.2 which tracks actual collections, per capita collections, and growth of collections in all three states from 2002 – 2011. Using DTSC’s own per capita rate, TRC’s collections in Vermont have increased by 161% since the implementation of the mandatory manufacturer program. California’s increased by 167%. Maine’s has only increased by 42%, reflecting the incremental implementation of its mandatory program.

TRC finds this significant. All three programs achieved similar levels of early growth subsequent to the implementation of mandatory programs. All have experienced a flattening of growth after a high initial growth. In Maine and Vermont, both programs saw high initial growth and collections flattened quickly. TRC is seeing similar results in California. None have achieved the kind of growth contemplated by DTSC’s proposed regulation. This suggests the positive impact of the legislative mandates on collections in California has already been enjoyed by the program and the future increases contemplated in the Section 66274.5 of the proposed regulation are highly unlikely.

Table 1.2: Comparisons of Collections Maine, Vermont and California

Year	Maine	Tstats per 100,000	Growth	Vermont	Tstats per 100,000	Growth	California	Tstats Per 100,000	Growth
2002	280	21		54	9		702	2	
2003	482	36	72%	194	31	259%	2,395	6	241%
2004	1,078	81	124%	131	21	-32%	3,025	8	26%
2005	1,290	97	20%	371	59	183%	3,945	10	30%
2006	2,924	220	127%	223	36	-40%	5,110	14	30%
2007	4,656	351	59%	1,665	266	647%	5,750	15	13%
2008	5,555	418	19%	1,367	218	-18%	7,007	19	22%
2009	6,374	480	15%	1,890	302	38%	7,542	20	8%
2010	6,523	491	2%	3,349	535	77%	13,340	35	77%
2011	6,616	498	1%	3,572	570	7%	18,687	50	40%

(Red indicates start of mandatory HVAC wholesaler collections)

Mandatory collection of mercury thermostats by wholesalers went into effect in Maine in July 2004, in Vermont in April 2009, and in California in July 2009. You can see that in the first full year following the effective date of the mandatory thermostat collection requirement, there is an expected increase in thermostat collections¹⁴ in each state that is roughly comparable in terms of its annual growth rate --- Vermont and California are identical at 77%, Maine’s was higher. California’s growth rate is now decelerating, which was the case in Maine and Vermont as well.

As displayed in Table 1.3, the DTSC is projecting an unheard of 220% increase in the growth rate of thermostat collections in the fourth full year (2013) following mandated wholesale

¹⁴ S. Sidque et al, *Factors influencing the rate of recycling: An analysis of Minnesota counties*, 54 Resources, Conservation and Recycling 242, 248 (2010) (“Our findings also indicate that regulations can be an effective means of increasing recycling. We found that the enactment of recycling ordinances making residential recycling mandatory increase the rate of recycling.”).

collection of used mercury thermostats, after California already experienced its first year surge in collection with typical declining rates thereafter. In its Initial Statement of Reasons, DTSC provides no justification why a 220% increase in 2013 over 2012 collections is either feasible or reasonable. As documented above, experience elsewhere cannot support the kind of growth contemplated by DTSC’s proposed collection rates. This growth rate analysis supports the conclusion that the annual “percent goals” for 2013 – 2022, are simply a set of rising round numbers in arbitrary increments with no factual foundation. Not only is the 220% annual growth rate for 2013 unreasonable and factually unsupportable, but the projected growth rates in later years is unreasonable and factually unsupportable as well.

Table 1.3: DTSC’s Projected Growth Rate for California Collections (2013-2022)

Year	T-Stats Collected/Projected	Tstats Per 100,000	Annual Growth Rate
<u>2009</u> [1]	7542	20	
2010	13,340	35	77%
2011	18,687	50	40%
<u>2012 (P)</u> [2]	20,000	54	8%
2013 (P)	65,000	173	220%
2014 (P)	95,400	253	46%
2015 (P)	113,850	302	19%
2016 (P)	131,300	348	15%
2017 (P)	147,750	392	12%
2018 (P)	144,750	384	-2%
2019 (P)	140,250	370	-3%
2020 (P)	135,750	360	-3%
2021 (P)	130,500	346	-4%
2022(P)	126,000	334	-3%

[1] California’s mandatory thermostat collection law effective July 2009

[2] (P) indicates projected. The projection for 2012 is an estimate from TRC based on collections to date; for 2013 and thereafter it is what is projected by Section 66274.5 of the proposed regulation.

It is noteworthy that researchers have found that the enactment of statutory or regulatory recycling goals does “not have a statistically significant positive effect on recycling.” W.K. Viscusi et al, *Discontinuous Behavioral Responses to Recycling Laws and Plastic Water Bottle Deposits* at 11 (NBER Working Paper 15585¹⁵, 2009)(ruled out classifying recycling laws with recycling goals as “effective recycling law.” An effective recycling law is one with “mandatory recycling, opportunities for recycling, or regional waste management plans with recycling considerations.”). In short, the existence of a recycling goal is ineffective in changing behavior

¹⁵ Available from the National Bureau of Economic Research. <http://www.nber.org/papers/w15585.pdf>

and improving recycling, and DTSC cannot count on the existence of a goal as an incentive or facilitator in promoting recycling, particularly the increased volume of thermostat recycling in Section 66274.5 of the proposed regulation.

II. TRC Sees No Reasonable Pathway for Compliance with the Performance Requirements

DTSC's collection rate performance requirement assumes significant percentage increases in collections in 2013, 2014, and beyond. Table 1.3 above shows the absolute number of thermostats manufacturers' would be required to collect and the number per 100,000 population. TRC's California program is currently collecting ~50 per 100,000 population and projects a similar level of collections in 2012.

As mentioned previously, TRC's California collections have increased by 167% since the 2008 Act was passed. To keep manufacturers in compliance, the program will have to increase collections by another **220%** in 2013 and by an additional **46%** in 2014. By the end of 2017 TRC will need to recover **140,000** more thermostats *per year* over current levels. This a **2000%** cumulative increase over collections achieved prior to the implementation of the mandatory program.

TRC fails to see any reasonable basis for the proposed performance requirements. The requirements do not reflect thermostat recycling program outcomes in any other state,¹⁶ including those with disposal bans, mandatory collection programs and other incentives. No state, with a high baseline number (<5,000 units) has achieved the proposed growth rates. Even Maryland, at its peak with its special program, failed to achieve these rates, and as referenced above, the high rates were not sustained after the special energy program was curtailed. The proposed annual growth rates are not only not supported by any other experience with collecting and recycling thermostats, but they enjoy no credibility based on consumer recycling data, which likewise demonstrates that annual increases in recycling rates in a given state occur gradually over a considerable period of time (decades).¹⁷

Recognizing DTSC must envision a reasonable path to compliance TRC believes it is instructive to review recent enhancements to the program; enhancements advocated for by others; and how these enhancement may affect collections in California.

2012 Enhancements

TRC expanded advertising in 2012 that targeted both California HVAC contractors and consumers generally. Enhancements included but were not limited to:

- Placing full-color tip-in inserts in the May, June, and July issues of *Indoor Comfort News*, the only California specific HVAC trade magazine. Each issue reached 17,000 subscribers in California.

¹⁶ See TRC's 2011/2012 Progress Report, Appendix- Mercury Recovery Index. Available at: <http://www.thermostat-recycle.org/media/index>.

¹⁷ <http://www.calrecycle.ca.gov/bevcontainer/Rates/BiannualRpt/12MonPeriod.htm>

- Running consumer-facing banner ads on www.sacbee.com, www.latimes.com, and www.sfgate.com.
- Implementing an aggressive direct-mail campaign targeting California HVAC contractors. Over 16,000 postcards have been mailed, with another 16,000 planned this month.

To date, TRC has seen no impact in 2012 collections from this significant increase in direct outreach. In fact, as of last month, collections were down 8% compared to the same period last year.

While awareness can be an important factor in influencing recycling behavior, it is not the only factor. TRC believes awareness of California's disposal ban, contractor mandate to recycle, and program availability at HVAC wholesale distributors is very high. TRC's recent experiences in California suggest increased investments in its awareness programs will have a small impact on future collections.

TRC Field Staff

TRC currently does not have staff assigned to a specific state or like some other national stewardship organizations regional staff. TRC explored retaining a consultant to conduct site visits to California HVAC wholesalers this year and opted not to pursue this tactic. A number of factors influenced this decision and TRC believes DTSC should consider these factors in establishing performance requirements. For instance:

- There are over 380 HVAC wholesale collection locations in California. It is not practical, as has been suggested by others, to physically visit all locations within a calendar year. TRC notes the sales representatives of its manufacturer members do not visit every customer location in the state annually.
- TRC site visits have little impact on locations that are not participating in the program or are minimally participating (meaning little or no evidence of active collections). For non-participating locations the most frequent refrain is branch staff is not empowered to order containers. For those showing minimal participation, again it reflects either disinterest at the location or that corporate has not stressed the program. Again, our experience is that TRC will not affect this during a field visit. It must be recognized TRC has no authority, real or perceived, to enforce the requirement to collect.
- Routine site visits condition undesired behaviors. For instance, Maine Department of Environmental Protection staff routinely visited locations and shipped their recycling containers. This conditioned staff to expect others to prepare and ship their bins which is a basic responsibility of the collection location. Now, TRC frequently receives calls requesting when TRC staff will come and pick up the bin.
- TRC can achieve similar outcomes as site visits through phone, mail, and engaging corporate offices. TRC's experience is the only value in field visits is accelerating the shipment of bins, not signing up new collection locations. It is more efficient to use

postcards, staff training, and engaging corporate offices than physically visiting each location.

It was also suggested TRC staff attend local contractor meetings. TRC has researched various marketing opportunities in California and determined this is not a viable strategy. National trade groups have state and in many cases regional or local chapters that host a number of activities. TRC determined that these groups generally represent a very small subset of the industry and their meetings are social events that provide little or no opportunity to promote the program. TRC has exhibited at a number of regional trade shows in California and determined the attendees at most of these events are not the targeted audience and or attendance is poor providing little justification for future participation.

Financial Incentive

A certain mythology has developed over the positive impact of a financial incentive on program outcomes. Some continue to maintain an incentive significantly increases collections. That has not been TRC's experience in Maine and Vermont. TRC has found the increases in collections achieved in those states are no greater than in other states with similar mandatory programs and no financial incentive. Likewise, as explained elsewhere in these comments, the per-capita collection rates result from the high installed base of mercury-added thermostats remaining and the relatively low populations of both states.

DTSC should not assume that the imposition of a financial incentive program would lead to a meaningful impact on mercury-thermostat collections. It certainly will not lead to the kind of percentage or absolute collections envisioned by Section 66274.5 of the proposed regulation. DTSC indicated that it relied on select publications on mercury-add thermostat collection programs in developing the proposed regulations. TRC cautions DTSC on the utility of these publications. TRC notes the HVAC industry was not consulted in the drafting of any of these reports. TRC suggests DTSC expand its scope of its literature review and include TRC's annual reports to the Maine Department of Environmental Protection and Vermont Department of Environmental Conservation in order to better understand the programs in each state. TRC has appended the 2009, 2010, and 2011 reports to these comments.

TRC also believes a more thorough review of the incentive programs is also instructive. TRC urges DTSC to consider the following in assessing the potential impact of a financial incentive on program outcomes:

- **Supply Channel Barriers:** Incentive payments to contractors, technicians, and homeowners participating through HVAC wholesale distributors and HHW facilities are neither timely nor direct. It is important to recognize TRC has no means to make direct payment. TRC relies on cumbersome mail-back coupons to remit incentive payments via check. The coupon system has a number of faults; the biggest being as it often takes months to fill and return a bin to TRC delaying payment. Particularly for an HVAC technician, a check in the amount fifteen dollars for three thermostats is not much of an incentive if it takes nine months to receive payment. For a consumer, \$5.00 off the purchase of a \$75.00 thermostat is also not significant.

- There are no easy fixes to this issue. HVAC distributors oppose making direct cash incentive payments to customers. For distributors, discounts on purchases do not work either. They would apply to the account holder, frequently not the person whose behavior TRC is trying to affect. Clearly cash is also not an option at HHW locations.

TRC's retail programs in Maine and Vermont address this issue by offering a \$5.00 discount on any purchase. However, TRC cautions DTSC from assuming a similar program could be developed in California. Both Maine and Vermont had retail mercury-added lamp programs in place and many retailers were familiar with operating a take-back program for mercury devices. It is also important to recognize that there is no big-box retail participation in this program and only local hardware stores participate. Relying only on small retailers is negated to some extent in Maine and more so in Vermont because both states are very rural.¹⁸ TRC purposefully targets HVAC wholesaler as they remain the most convenient location for HVAC contractors/technicians to recycle. In small rural communities these local retailers may offer similar convenience. However, this is unlikely the case in California. Finally, both state agencies took very active roles in developing these programs by recruiting retailers, providing recycling bins, and by providing regular technical assistance.¹⁹ Recognizing the geographic scale, lack of DTSC staff support, and the marketplace TRC does not foresee similar program support from state agencies in California. The absence of such support suggests little likelihood of developing a similar program in California.

- **Level of Participation in Incentive Programs is low:** Only a small subset of contractors/technicians actually participate and take advantage of the incentive program. This is despite over three years of operations in Vermont and five in Maine and extensive direct outreach to the channel (direct mail, paid advertising, and active collection at HVAC wholesale distributors).

In Vermont approximately 30% of all thermostats recovered did not request incentive payment. The number of those not requesting incentive payments was higher at locations using the "coupon," where only 55% of the thermostats returned requested payment. It's important to recognize the desired behavior of recycling occurred, but program participants chose not to claim the \$5.00 incentive.

Likewise, individual contractor/technician participation remains low. In three years less than 500 persons have requested payment in Vermont, of which well less than 50% are contractors/technicians (according to state licensing records there are at least 1,000 licensed technicians in Vermont). TRC's experiences in Maine are similar. And this experience is not unique to Vermont and Maine. The Product Stewardship Institute's

¹⁸ See New York Times, May 13, 2012. Available at: <http://www.nytimes.com/2012/05/14/us/dollar-store-plans-divide-vermont-residents.html>

¹⁹ In both states, agency staff routinely visit retail locations and facilitate participation by assisting in packing the recycling bin and preparing it for shipment. In the absence of such support a majority of locations fail to regularly return the bin.

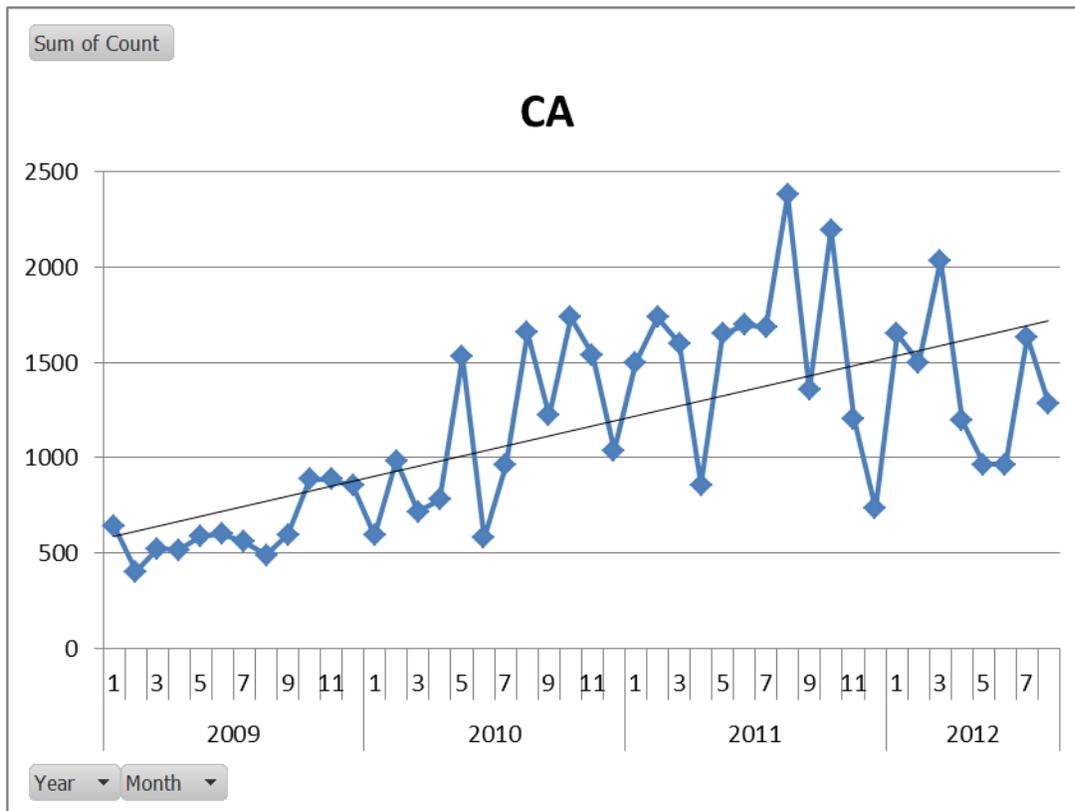

final report of the 2006 incentive pilot documented overall program participation was low.²⁰

In part this reflects the program’s inability to make direct and timely payments. TRC believes it also reflects economic choice. The average hourly wage of an HVAC technician in Maine is \$20.00 per hour and \$19.00 in Vermont.²¹ For many technicians the incentive is insufficient to have a meaningful effect on recycling behavior.

To further illustrate fundamental problems with the assumption a financial incentive will have a meaningful impact on collection rates; TRC encourages DTSC to revisit the April 11, 2012 presentation given by TRC staff to Karl Palmer, Andre Algazi, Robert Sullivan, and Ed Benelli.

The following charts, updated to include 2012 collection data through August, demonstrate the impact of an incentive of collections.

Chart 1.1: California Thermostat Collections by Month 2009-2012

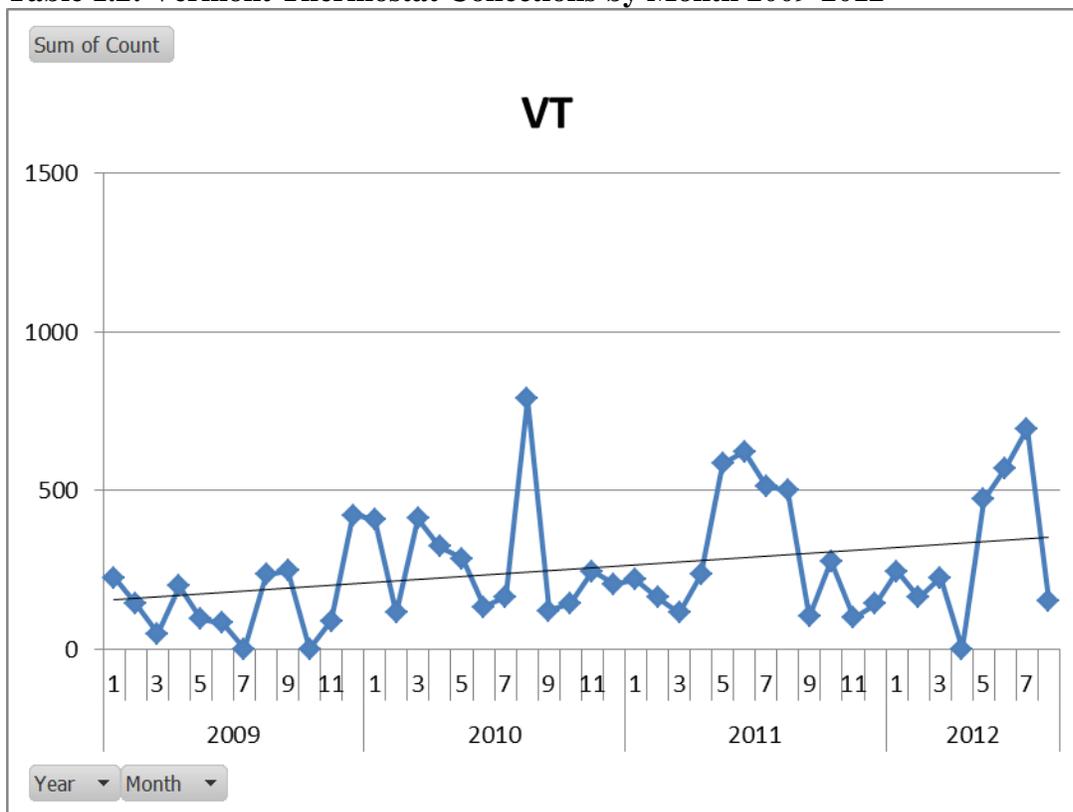

²⁰ Mercury Thermostat Recycling Final Report on Effect of Financial Incentive for HVAC Contractors in Two-State Pilot, Product Stewardship Institute, November 2007.

²¹ Mean hourly wages in Vermont and Maine are ~\$20.00 an hour. In California they are ~\$25.00 an hour. Data on HVAC technicians is available at: <http://www.bls.gov/oes/current/oes499021.htm>.

In California, collections were approximately 500 units per month prior to the implementation of the mandatory program (HVAC wholesalers had to act as collection points by July 1, 2009). Collections accelerated within a year and increased to over 1400 units per month through 2012.

In Vermont, collections were approximately 150 units per month prior to the implementation of the mandatory program (HVAC wholesaler had to act as collection points by April 1, 2009). Collections accelerated within a year and currently average around 300 units per months. Two additional data points are extremely important: 1) only 22% of the thermostats recovered in 2009 had a claim for incentive, most likely a result of thermostats collected prior to the incentive program and contractors/technicians opting out of the program and 2) in 2010 30% still opted out of the incentive program.

Table 1.2: Vermont Thermostat Collections by Month 2009-2012

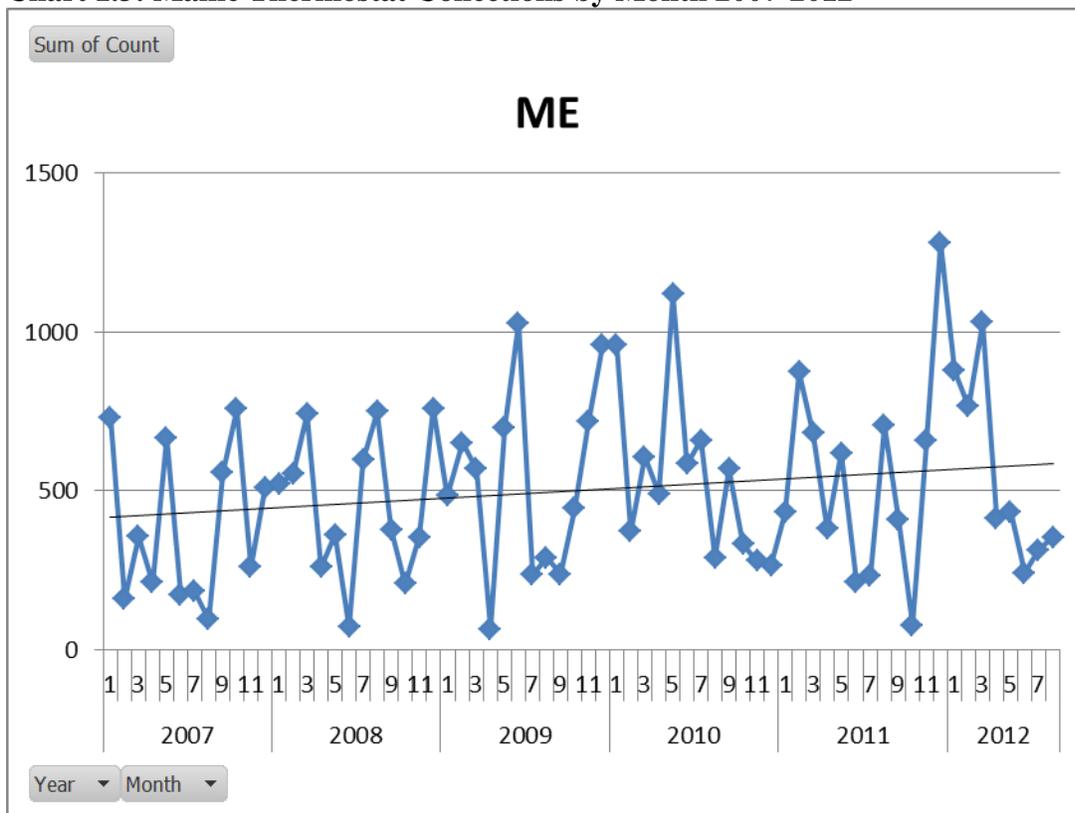

Maine provides a more interesting case. Maine’s mercury-added thermostat law was amended several times and one is able to isolate the impact of different aspects of a mandatory program (such as requiring HVAC wholesaler distributors to act as collection points).

The contractor/technician phase (through distributors) of the financial incentive program was implemented in the spring of 2007 and the homeowner (mail-back) was implemented by early 2008. The previously discussed retailer program was implanted during the winter of 2008/2009. Note collections increased by 59% from 2006 to 2007 and by 19% from 2007 to 2008 and have subsequently remained relatively flat. Importantly, the big increase in collections typically seen

with the implementation of a mandatory program occurred from 2004 -2006 (see Table 1.2), when Maine DEP provided TRC recycling containers to approximately 70 wholesale distributors that had been required to collect waste mercury-added thermostats since 2004.

Moreover, TRC saw recycling behavior similar to Vermont. TRC notes its annual reports to Maine DEP in which we highlighted that 44% of the thermostats collected in 2007 had no claim for incentive and subsequent review of payees to the program noted that by 2009 well over 20% of the payments had gone to persons other than those the law intended to incent (namely staff at collection points).

Chart 1.3: Maine Thermostat Collections by Month 2007-2012

Again, TRC cautions DTSC against assuming a financial incentive will have a meaningful impact on collection rates in California. The impact of the incentive has clearly been overstated, as actual collection and payment data indicate the impact was minimal in Maine. All the incentive achieves is to pay people to do what they are already doing and there is no data that suggests imposing an incentive independent of or in concert with other modifications will enable manufacturers to reach the proposed collection rates.

IV. Concerns with Reporting Requirements Imposed on Manufacturers, HVAC Wholesale Distributors, HVAC Contractors, Demolition Contractors, and others

A. Section 66274.7 and Section 66274.8 (C)(2)(g) Identification Requirements when Delivering Mercury Thermostats to a Collection Location

§66274.7 of the proposed regulation DTSC requires HVAC and demolition contractors or their staffs and others to provide the collection location with the contractor's State Licensing Board Identification Number (CSLB Number).

In our earlier comments on the proposed regulation we pointed out meaningful increases in collection rates are unlikely in the absence of additional public policy measures aimed at increasing compliance with California's mercury-added thermostat disposal ban and recycling requirement. Ostensibly this reporting requirement is an attempt to create accountability by providing DTSC with data to monitor compliance and enforce disposal/recycling requirements on contractors/technicians and others.

Unfortunately, this requirement is not well conceived and TRC fears it will be counter-productive. In exploring options regarding using reporting as means to monitor compliance with California's disposal/ recycling requirements DTSC should consider the following:

- Any step that fundamentally alters the simplicity of the program needs to be weighed against any perceived benefits of the change. Currently recycling a thermostat at any of TRC's collection locations in California requires nothing more than dropping the thermostat in the collection bin. For the collection location it takes ~5 minutes to prepare the collection bin for shipment. It is well understood that economics and convenience are critical factor in any recycling program²². Adding the additional step of reporting CSLB Number at a collection location fundamentally alters the process for both the collection point and program participant. Additional transaction costs (e.g. providing number, recording number, requiring staff assistance with recycling) will result in less recycling rather than more.
- The logistics and burden associated with collecting this data. It remains ambiguous how CSLB Numbers will be captured and reported to TRC. Would the collection points use log sheets and include them in the bin or would they create electronic records and transmit them to TRC? TRC notes the potential volume of data to be captured and reported. There are 11,449 active C-20 licenses in California and according to the Bureau of Labor Statistics a minimum of 17,000 HVAC technicians.²³ Assuming an average of 3 thermostats per transaction, under the proposed performance requirements the regulation contemplates approximately 49,000 transactions be recorded and reported annually.

²² Shaufique F. Sidiq, et al, The Effects of Behavior and Attitudes on Drop-off Recycling Activities, Resource Conservation and Recycling 54 (2010) 163-170.

²³ Estimate undercounts total number of technicians as it does not include self-employed workers. Available at: [http://www.bls.gov/oes/current/oes499021.htm#\(1\)](http://www.bls.gov/oes/current/oes499021.htm#(1)).

- Contractors and others simply place whole thermostats in the provided collection container—other containers are not used in the manner contemplated by the proposed regulation in where a technician could record a CSLB Number on container with thermostats. Beyond its incongruence with current practice, the use of additional package would decrease bin volume requiring more frequent bin shipments and add to TRC’s administrative costs with additional handling and disposal of the packaging.
- The utility of the data collected. It is unclear to TRC how the CSLB Number or the absence of a CSLB Number (or the frequency the number was reported) is valid indicator of compliance with the requirement to recycle mercury-added thermostats. By example, assume a CSLB Number is reported twice in a calendar year from a location that shipped 100 thermostats annually to TRC. By one measure this is an indication of compliance. What if the contractor holding that license employs 100 technicians and core business is service/repair? Under this scenario it suggests substantial non-compliance. TRC suggests DTSC better familiarize itself with CSLB licensing requirements as it is important to understand, CSLB licenses are business licenses not technician licenses.
- Enforcement of the reporting requirement on program participants other than manufacturers. How does DTSC envision enforcing this requirement? TRC notes there is no definition of contractor in the statute or regulation. Recognizing that it is a business license not an individual license (unlike other states that require technician licensing) who would be subject to enforcement—the contractor or the technicians employed by the contractor? In the absence of any meaningful consequence for non-compliance TRC sees little likelihood that 1) CSLB Numbers or names will be provided to collection points or that 2) collection points will collect and transmit data to TRC.²⁴
- For persons other than HVAC and demolition contractors (homeowners, handymen, others) it is unclear how the name, address and telephone number will be collected and reported to TRC and how TRC will report it to DTSC. Is DTSC contemplating that HHW locations and retailers to collect and provide this data to TRC? TRC notes that HHW and retailers have no obligation to participate in its program and suggests DTSC consider this reporting requirement is likely a significant disincentive for their participation in its program.
- No consideration has been given to the likely proprietary nature of this data. In effect DTSC is requiring TRC to report customer lists of its collection sites.
- Creating a perverse incentive not to recycle. Ironically, any meaningful consequence with the reporting requirement may lead to less compliance with the

²⁴ See “Contractors Walk on the Wild Side: Why?” Heinemeir, Kristin, University of California-Davis. Available at: <http://www.aceee.org/files/proceedings/2012/data/papers/0193-000249.pdf>.

recycling requirement. TRC fears a perverse logic may result—less risk in improper disposal than from the failure to provide CSLB number.

B. Subsection 66274.8 (a) and (c)

TRC is concerned with the requirement to specifying the brand name of each thermostat recovered. TRC represents 31 manufacturers that historically distributed 91 brands of mercury-added thermostats in the United States. Currently TRC records the count of the number of thermostats in each recycling container returned to the program by the manufacturer not the brand. If the manufacturer of a brand is not immediately known, staff uses a reference guide to identify the manufacturer. For those thermostats where the manufacturer is indeterminate or is not participating in the program the thermostat is recorded as “not our manufacturer” (NOM).

The proposed regulations would require significant changes in how TRC processes bin receipts by requiring TRC staff to pick from 91 brands of thermostats rather from a list of 31 manufacturers when recording recycling container receipts. TRC is concerned with the impact of this requirement on productivity and accuracy of data.

TRC believes knowing the brand of thermostat is unnecessary to proportion performance requirements among programs. Knowing the manufacturer is sufficient. If DTSC desires information on the brands manufactures’ owned or own, a program can include a list of manufacturers and the brand(s) that manufacturer owns or owned in its annual report. Likewise, program(s) can report the count of thermostats recovered by manufacturer, something TRC has done voluntary in each of its reports to DTSC.

C. Subsection 66274.8 (1)(A), (2)(A), (3)(A), (3)(C)(f)

TRC is pleased to note DTSC included the opportunity for the program to “get credit” for mercury switches recovered by the program. In 2011 TRC recovered 2,534 switches and representing an estimated 1,230 thermostats or 6% of the total thermostats recovered for the year.

However, TRC has a number of concerns with DTSC’s augmenting the annual report beyond the statutory reporting requirements. TRC previously communicated many of these concerns to DTSC on September 7, 2010 and March 1, 2011 and requests DTSC review these comments.

Much of the request for additional data seems to be driven in an effort by DTSC to assess HVAC wholesaler compliance with section 25214.8.14 of the Health and Safety Code. TRC disagrees with DTSC’s assessment that current reporting is inadequate to determine compliance with section 25214.8.14 and provides insufficient justification for the additional reporting requirements in the proposed regulation.

TRC notes it has provided data on the names, address, and zip code of all participating collection locations (records of locations where TRC shipped recycling containers) and

the number of out-of-service mercury-added thermostats collected at each location for three years (including collection container numbers with bin receipts for the last two).

Knowing which location has ordered recycling containers and those that demonstrated active collection by the shipment of waste mercury-added thermostats to TRC is more than adequate data determine which locations have ordered recycling containers and which locations are regularly shipping thermostats to TRC in compliance with section 25214.8.14. Logically this assumes DTSC has independently developed and maintains records of all facilities in California that have obligations under section 25214.8.14.

In an obvious effort to shift the burden of enforcement upon TRC, DTSC failed to consider the inherent limitations of the program to collect and maintain certain records on collection locations beyond what is already collected and reported to DTSC and the retroactive nature of these requirements. For instance:

- TRC data is limited to the information it collects through transactions with collection sites. TRC collects data from locations when recycling container(s) are ordered. This data includes a location name, contact person, street address, phone number, and email address. TRC also records the date the bin order is fulfilled. Subsequent to the initial order, the only data collected is the return address on the pre-printed Federal Express label provided with the recycling container. This data is limited name of the location and the street address and the date the collection container was received.

If the return address is different from the address in the system, then TRC updates its record for the location with the different address. The mailing label is provided by Federal Express and does not provide the opportunity to capture additional data like a contact phone number as being required by DTSC. Likewise, even if TRC could collect additional data on the label, the completeness or accuracy of that data is outside of its control.

- The program has not maintained records on all locations to which it shipped recycling containers. As records relating to a specific collection bin changed, the practice was to overwrite and update the record for the location now in possession of that collection bin. Additionally, the phone number (whether main branch number or direct line for staff person ordering recycling container) was not required to complete order.
- TRC notes it has been operating the program in California since 2002, well prior to the mandatory program. The statutory reporting requirements were developed recognizing this fact. TRC cannot provide data it never collected or could be reasonably expected to collect retroactively.
- TRC has no reliable means of knowing the location of a collection container unless 1) TRC is first provided location information with the initial order to ship collection container(s); 2) collection containers are returned from a collection

location and the return address (if different from the initial order or subsequent collection container returns) is provided to TRC on the pre-printed Federal Express shipping label; or if 3) the location is responsive to program inquiries related to location address, contact information, and collection container(s) assigned to that location.

- TRC's data on locations is transitory. Locations move, businesses are acquired and consolidate, cease operations, staff change, etc. At best, the program's data on collection locations are snap-shots in time. TRC stresses even items such as a street address, which one would assume to be stable, change with surprising frequency.
- When a collection location's name and/or address change it is difficult to determine if it is a new location or if an existing location that has moved. Until recently TRC did not request a "branch number" with the bin order which assists TRC in determining if it is a new location or an existing location that moved (note not all locations have branch numbers or provide them). Likewise, consolidation within the industry has resulted in the acquisition of distributors in California by others. In some cases the name of the location has changed, but in others it has not. Additionally, staff commonly continues to refer to the location by the previous name confounding efforts to update records.
- A distributor or HHW may have ordered multiple collection bins over time using different location names and/or addresses. Many of the older bins from these locations have never been returned and remain in the TRC database often appearing as separate locations where they are not. Rarely (>10 in the last 24 months nationally), do collection locations proactively inform the program of address changes. The fact a single recycling container has not been returned does not mean a HVAC wholesale location is not in compliance with the requirement to collect or with regulations on the storage of universal wastes.
- Requiring the inclusion of data as the "date of report" does not afford TRC the opportunity to compile, analyze, and error check the data. This is why the statute affords TRC three months to compile data and prepare its report for the previous 12 months.
- The unique identification number of a container is not a viable means for tracking collection locations. Many locations have more than one recycling container and recycling containers are lost, move, and/or reassigned. While TRC still assigns container(s) to a collection location, the movement of bins among locations limits its utility as an identification number for a collection location. The weakness of the bin unique identification number became apparent in developing TRC's new data management system. As such TRC no longer uses the unique identification number of each bin to track collection locations.

TRC emphasizes that maintaining records on collection locations is continuing challenge to the program. Recent upgrades in TRC’s data management system provide significant improvements in the program’s ability to manage and track location information and collection container receipt information. However, TRC remains dependent on others for much of the data DTSC is requesting. By example, in May 2012 TRC sent 385 letters to HVAC wholesale distribution collection locations in California. The letter contained a simple form requesting location information and the bin number(s) currently at the location. To incent response, respondents were entered into a drawing for a \$100 visa gift card. The initial mailing had a 35% response rate. In July correspondence was sent to unresponsive locations and TRC received 70 additional responses—for a total response rate of 53%. Staff follow-up via phone was also conducted to validate and clarify responses.

Finally, TRC notes inconsistencies in the reporting requirements outlined the Initial Statement of reasons and the proposed regulations. Specifically, the Initial Statement of Reasons indicates a contact person is to be reported in addition to the items in the proposed regulations. DTSC should address this issue in the final regulations.

D. Subsection 67388.8 (i)

This subsection will require TRC on an annual basis summarize information on programs it operates in other states. TRC fails to see any reasonable basis for this requirement as DTSC failed to adequately justify the burden of this significant expansion to the annual report.

TRC notes that DTSC states that “some of the information in the subsection *may* be publically available.” In fact, all of this information is publically available. For all states with mandatory programs TRC submits reports for the preceding year beginning with Maine’s by January 30. Others follow with the majority due April 1. These reports are part of the public record and available upon request from each state and many are posted on TRC’s website. Recognizing only Pennsylvania’s report would not be complete by California’s April 1 deadline, conflicts with DTSC’s assertion that such information would not be available in a timely fashion by the May 1 posting date.

Table 1.4: State Reporting Requirements

State	Due Date
Maine	30-Jan
New Hampshire	1-Mar
Rhode Island	1-Mar
Iowa	1-Apr
California	1-Apr
Illinois	1-Apr
Montana	1-Apr
Vermont	1-Apr
Pennsylvania	1-Jun

Likewise, information on each states' statutory requirements is widely available with a simple web search of each state's mercury thermostat law. Moreover, TRC notes that statutory provisions are unlikely to change from year to year, yet DTSC is requiring TRC to report the same information on an annual basis.

Finally, TRC questions DTSC rationalization this requirement is driven by the need to meet the May 1 Web posting deadline. How does this additional information affect the determination the program achieve its performance requirement? It seems such a determination is a simple calculation of the number of thermostats collected by the program compared against the program's performance requirement. Unless DTSC is suggesting it will unilaterally order manufacturers to modify their program(s) within 30 days of the submission of the annual report there is no urgency for this additional information and the requirement places an unreasonable and poorly justified obligation on the program.

V. The Performance Requirements Inadequately Address the Inherent Limitations of Awareness Strategies and the Impact of Lack of Channel Participant Accountability

As documented above, DTSC's proposed performance requirements contemplate a 639% increase in the number of mercury-added thermostats recovered during the period of 2012-2017²⁵. This is in addition to the 167% increase achieved during the period of 2008 – 2011.

To put it simply, the growth rates do not make sense, are divorced from all experience around the United States, and the numbers do not add up. TRC cannot imagine, even under a perfect regulatory and market environment whereby incentives (positive and negative) and facilitators align to achieve the kind of thermostat collection numbers that DTSC is imagining by its proposed regulation. In addition to the limitations that TRC has already described above, DTSC should also take note of other limitations as well.

There is a body of research literature that has examined the determinants of recycling behavior, primarily in the consumer/residential channel.²⁶ The determinants include an array of extrinsic and intrinsic incentives, and extrinsic and intrinsic facilitators. Incentives could include monetary rewards, social influence, enactment and enforcement of laws and regulations, personal pro-environmental attitudes and attachment to a cause. Facilitators can include education and awareness, and minimizing barriers to recycling (providing access).²⁷ The literature also indicates that demographic variables, such as education, income, age, and geography can explain to some extent whether the waste generator will be influenced by specific incentives or facilitators and become a diligent recycler or not. Whether the waste generator is a residential consumer or a business can influence whether specific incentives or facilitators are actually

²⁵ TRC is projecting collections of ~20,000 mercury-added thermostats in 2012 in California.

²⁶ See e.g., J. Hornik et al, *Determinants of Recycling Behavior: A Synthesis of Research Results*, 24 *The J. of Socio-Economics* 105 (1995); Sebastian Bamberg, et al, *Twenty years after Hines, Hungerford, and Tomera: A New Meta-Analysis of Psycho-Social Determinants of Pro-Environmental Behavior*, 27 *Journal of Environmental Psychology* 14 (2007).

²⁷ J. Hornik et al, *id.*

influential in affecting recycling behavior. Certain incentives and facilitators can accomplish so much, and beyond some point they are no longer effective and cannot be justified.

Mercury thermostat collections might be improved, although not to the levels imagined by DTSC in its proposed regulation, by some additional steps that may or may not be authorized by statute. The point TRC is making here is that the absence of additional incentives and facilitators, including weaknesses in the underlying regulation, should be factored into determining what is practicable.

Access to recycling is no longer going to be a major issue. TRC sees no substantial increases in access going forward in California, as wholesaler compliance has reached a level in which lack of access is not a mitigating factor for contractors and technicians. While collection bins will continue to be distributed to new locations in 2013 and beyond, that increase will not substantially affect program performance, particularly within the time-frame envisioned by the proposed regulation. The collection rates should not be based on prospects for increased access to thermostat recycling.

TRC urges DTSC to consider 1) the inherent limitation of awareness strategies 2) high levels of HVAC contractor/technician noncompliance with other regulations in the absence of meaningful enforcement, and 3) the level of enforcement (or lack thereof).

Regarding the first point, there is a substantial body of research regarding psychological and social determinants of recycling behavior.²⁸ This research suggests there are outer limits to which marketing and promotional strategies can achieve environmental outcomes by recognizing the receptiveness of the audience to the messages. In other words, due to factors beyond TRC's control there are segments within the HVAC contractor/technician community that will not alter their behavior despite awareness of the moral and/or legal obligation to do so.

The proposed regulations make no effort to account for HVAC contractor/technician attitudes and TRC recommends DTSC consider HVAC contractor/technician demographics in assessing the likelihood of the behavior change needed to meet or exceed the collection rates. By example, according to the Bureau of Labor Statistics less than 5% of HVAC technicians have a Bachelor's degree or higher and 13% failed to earn a high school diploma; the median wage is \$20.00/hour and over 15% are self-employed.

TRC's program performance to date (particularly in comparison to other states with mandatory programs) suggest significant behavioral change by technicians and contractors in California as a result of improved access to recycling at wholesale drop-off locations and channel education. Notwithstanding these existing facilitators and incentives, many technicians and contractors still have not altered their behavior. While TRC believes that there will be some additional investment on its part in these types facilitators and incentives that can continue to incrementally increase collection of mercury thermostats for recycling in California up to a point, without additional types of incentives *coming from other actors in the system who are likely to influence*

²⁸ Sebastian Bamberg, et al, *Twenty years after Hines, Hungerford, and Tomera: A New Meta-Analysis of Psycho-Social Determinants of Pro-Environmental Behavior*, *Journal of Environmental Psychology* 27 (2007) 14 -25.

contractor/technician/wholesaler behavior more than TRC can influence their behavior, the kind of aggressive collection results contemplated by the proposed regulation will never be achieved. For example, the statute imposes no requirements on contractors to offer or require attendance at any educational programs that would include thermostat recycling content. The statute imposes no mandatory communication programs upon the technician's employer. Employers are in a very effective position --- the most effective position of all ---- to explain to their employees that return of mercury thermostats is a requirement of their job and they could face sanctions for failure to comply with this legal requirement. This could be supplemented by something as simple as requiring the placement of a sign on the dashboard of every contractor's work vehicle that used mercury thermostats must be returned to a wholesale location with a collection bin for recycling under penalty of law. This would daily reinforce in the mind of the waste generator --- the person whose compliance is critical to the used mercury thermostat collection system --- that used mercury thermostats must not go into the waste stream. The statute's failure to include obligations on other persons in the collection system --- persons who are in a far better to influence behavior than manufacturers or TRC --- is a factor that weighs against setting collection rates that have not basis in reality.

TRC suggests DTSC look at two analogous regulatory issues to further illustrate this point. The first is the management of HCFC-22 (R-22). US EPA regulates R-22 under Section 608 of the Clean Air Act and R-22 is also regulated by the California Air Resources Board. A complex regulatory scheme has been developed to both restrict the supply of R-22 in the market to effect a transition towards more environmentally friendly refrigerants and to limit the amounts of R-22 released into the environment through system leaks and intentional venting.

EPA restricts the supply of R-22 by limiting the amount of virgin R-22 available in the market in effort to stimulate the reclamation of R-22. Interestingly, despite recent significant price increases in R-22 (tripling in some cases in the last 12 months), reports from within the industry continue to suggest the contractor/technician behavior remains unchanged as there is no indication that contractors/technicians are reclaiming significantly higher amounts of refrigerant despite economic incentives to do so. TRC notes that there has never been any meaningful enforcement on contractors/technicians.²⁹

The second analogous issue is compliance with California's Title-24 by the HVAC industry. One study conducted by Southern California Edison indicated the non-compliance rate in residential building for duct improvement was 73% and in nonresidential 100%.³⁰ By most estimates permits are obtained for fewer than 5% of air-conditioning replacements in California homes.³¹

The Western HVAC Alliance conducted a survey of HVAC contractors focusing on residential replacements (service and repair).³² TRC notes the vast majority of respondents indicated a little

³¹ Kristin Heinemeier, *Contractors Walk on the Wild Side Why?* University of California Davis, (2012) Available at: <http://wcec.ucdavis.edu/wp-content/uploads/2012/05/Kristin-Heinemeier-ACEEE-2012.pdf>.

³² *Ibid*

probability or certainty for getting caught not complying with requirements to failing to obtain a building permit? Likewise the perceived consequences for getting caught are insignificant.

Finally, DTSC should also consider whether it is going to devote significant resources for a robust or non-existent enforcement program directed at waste generators. This is a powerful incentive if it is robust, but if it is non-existent it diminishes the likelihood that collections will be higher than experienced elsewhere.

TRC believes DTSC should consider demographic/cultural factors, and the channel's history of non-compliance in analogous regulatory regimes, and the DTSC's regulatory enforcement program directed at waste generators. This is a critical weakness in the proposed regulation. DTSC should acknowledge these limitations in the system created by the statute and the demographics of the population that are being counted upon for compliance, and discount the feasibility of its proposed collection rates substantially.

CONCLUSION

While these comments are pointed, TRC offers them constructively in the spirit of the legislative intent. Like the statute, TRC's mission is to maximize the collection of mercury thermostats for recycling, and as documented by TRC's annual reports TRC has a record of steadily increasing collections.

For the reasons set forth above, DTSC should reduce the collection rates to what is feasible; DTSC should revisit the proposed reporting requirements, because they are likely to have a deleterious impact on TRC's collection program, and DTSC should look at what legal measures should be required by other actors in the thermostat collection system that would have a greater impact on collection system performance including contractor/technician education programs undertaken by contractors and their employers.

Subject: Thermostat Recycling Corporation's 2011 Annual Report

Dear Mr. Dyer and Ms. Pistell:

Attached is TRC's annual collection report for calendar year 2011. TRC has made its best effort to be responsive to the Department's request for expense and collection data.

In recent correspondence to the Department we made a number of recommendations that will improve the efficiency and effectiveness of this program. We look forward to engaging with the Department and others in a constructive dialogue in the future.

Sincerely,
Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", written over the typed name.

Mark Tibbetts
Executive Director

I. Thermostat Data

Table 1. Thermostat Count by Manufacturer

	Total Number of Thermostats by Brand Holder	Total Mercury Switches	Pounds of Mercury

Table 3. 2011 Non-Qualifying Thermostat Totals

	Mail-back (homeowner Program)	Retail	Wholesale	Contractor	HHW
Total Received	5	2607	3139	92	773
Non-Qualifying due to no Cover[†]	n/a	n/a	n/a	n/a	n/a
Non-Qualifying due to other Reason^{††}	n/a	n/a	n/a	n/a	n/a
Total	5	2607	3139	92	773

1. Please list towns from which TRC received Homeowner thermostats through mail-back program. Use Separate sheet.

Athens, Harborside, Belgrade, Waldoboro, and Orono

2. Number of TRC thermostats qualifying for incentive payment?

5976^{†††}

TRC voluntarily pays the incentive on thermostats received without covers. It has since the program's inception in 2007. If an eligible (i.e. thermostat containers mercury and has coupon attached) is received without a matching remittance coupon, that thermostat remains in the system until such a time a remittance coupon is received that matches coupon that was attached to the thermostat. Likewise, if TRC receives a remittance coupon and has yet to receive a thermostat with a matching coupon the coupon remains in the system. At that point TRC will issue payment.

TRC recovered 48 items in 2011 with incentive coupons attached that were deemed ineligible (e.g. non-mercury thermostat, other mercury containing device, non-mercury containing device, mercury thermostats collected through a retail collection point or mercury thermostats collected at EcoMaine). TRC received 5 remittance coupons that were incomplete, damaged, or otherwise illegible that resulted or will result in nonpayment. Finally, TRC voided over 20 checks in 2011 that were undeliverable or stale checks.

[†] TRC did not track returns in this manner. See response to question 3.

^{††} TRC did not track collections in this manner. See response to question 3.

^{†††} This figure represents the count of mercury thermostats received at TRCs' processing facility in 2010 that either had an incentive coupon attached or came from sources that do not require coupons for payment (retail and mail-back).

II. Costs

Table 4. Thermostat Recycling Program Costs*

Program Component	TRC Program	Maine Incentive Program
TRC Staff and Administration [†]	\$266,580	n/a
Postage	\$2,831	n/a
Phone	\$138	n/a
Recycling Costs	\$299,877	n/a
Maine Incentive Payments		\$25,775
Maine Collateral Design		n/a
Printing of Maine Materials		n/a
Maine Marketing and Promotion ^{††}		n/a
Marketing and Promotion ^{†††}	\$123,221	
Legal Fees	\$69,252	\$24,020
Other ^{††††}	\$59,065	n/a
Total	\$820,965	\$49,795

* TRC allocates expenses supporting the Maine program when it is able to isolate costs that may be solely attributable to the Maine program. Certain materials are used and/or activities are conducted concurrently in other states (i.e. development or printing of collateral or direct mail) and TRC cannot isolate the costs for those activities strictly to Maine. TRC is also unable to apportion recycling costs to Maine, as it would underreport actual costs to process thermostats as additional labor is required to process thermostats due to the incentive program.

† TRC staff and administration includes expenses for staff, corporate fees, copying, shipping/next day air (does not include costs to ship recycling containers), toll free line, wireless services, conference calls, software/hardware, banking fees, recycling container expense, and annual audit.

†† As the following section will highlight TRC carried out a number of activities in 2011, but is unable to allocate the expenses solely to Maine.

††† Marketing and promotion includes direct costs to promote the program nationally and in certain states, including Maine. It does not include TRC staff time devoted to promoting the program (TRC estimates at minimum 50% of staff time is expended on promoting the program). These costs include expenses for marketing consultants, website development/maintenance, paid advertising, graphic design, trade show (not including travel expense), public service announcements, direct mail, printing, meeting registration fees, and sponsorships.

†††† Other includes costs for travel, overhead, insurance, memberships/subscriptions, Vermont incentive payments, and miscellaneous expenses.

III. Education and Outreach

Paid Advertising: Please include ad copy, a list of papers and dates

Web-based advertising— TRC developed new rotating banner advertisements for 2011 and ran them (Exhibit 1) on the websites contractingbusiness.com (160x600 skyscraper) and hvac-talk.com (300x250 medium rectangle) during the months of April, May, September and October. Together, the websites average 1.8 million pages views and 280,000 unique visitors per month. HVAC-Talk.com, an online discussion community, boasts 122,000 registered users.

TRC strategically placed ads to coincide with the spring and fall HVAC business cycles. While the ads were featured, 701,528 impressions were delivered and 522 clicks on the advertisements were recorded.

Exhibit 1: Web Banner Advertisement (300x250 version)

Social Media— TRC developed and deployed a Social Media strategy that leveraged the power of Google and the popularity of Facebook. This campaign, which ran from mid-September through early December, geo-targeted contractors and consumers in states with mercury thermostat disposal bans, including Maine, in an effort to create awareness and increase thermostat collections.

Ads and landing pages were developed with variable messages targeting both audiences. What makes this campaign so interesting is the fact it was targeted. Advertisements appeared on Google search results pages after an individual searched terms related to TRC's mission (E.g. thermostat replacement, contracting recycling regulations, mercury thermostat recycling, programmable thermostats, etc.). Similarly, the Facebook campaign targeted users over 18 who "like" industry-relevant topics or organizations (i.e. renovating, renovators, HVAC, HVAC Technicians, home repair, etc.)

The campaign was very successful. The campaign resulted in over 340,000 impressions on Google and 8.1 million on Facebook.

an industry-funded non-profit

**Don't know how easy it is
to recycle mercury
thermostats?**

You do now.

We know that when it comes to getting the job done, the last thing you need is another hassle. But the simple fact is recycling old mercury thermostats in your state is the law. You can just toss them in the dumpster and be done with it.

And we're here to make compliance with said law easy. Very easy indeed.

[Find a Drop Off Location!](#)

Click. Locate. Drop-off.

Yep, it's that simple. Just click here to locate the drop-off point near you (or your job site) and take the old mercury thermostat - or your stockpile of old thermostats - to them and drop them off. Not only will you walk away knowing you've done the right thing, you'll know you're not breaking any state laws.

Tip-In Insert in HVAC Trade Press—TRC placed an insert in the April and October issues of *HVACR Business* (see Exhibit 3). The insert was included in issues received by approximately 12,000 subscribers in states with mercury thermostat disposal bans (including Maine). This enabled TRC to incorporate the message, “It’s something you gotta do, because it’s the law.” Additionally, TRC incorporated the logos of larger HVAC wholesale distributors on the backside of the card enabling contractors to quickly identify collection locations.

2. PSA and Radio & TV: Please include a description of any changes to the PSA’s resubmission to the stations, or relevant information.

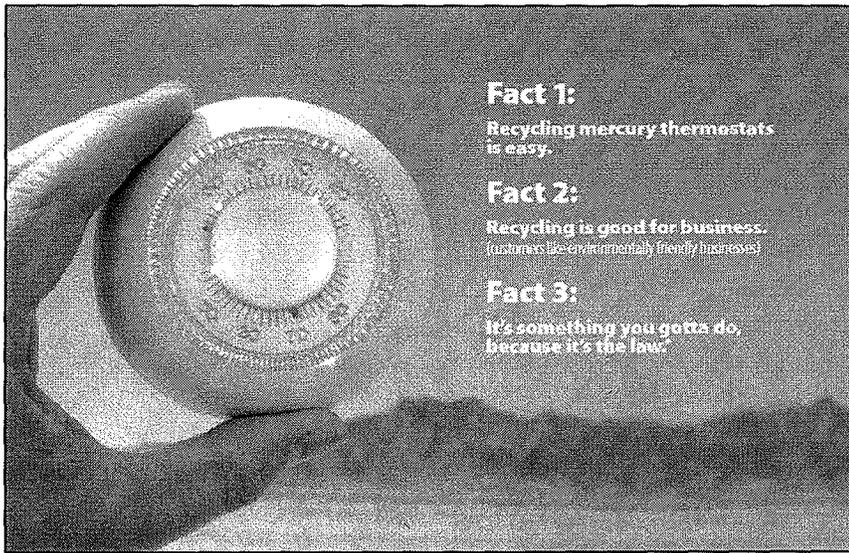

TRC did not resubmit radio PSA’s to stations in the Maine market in 2011.

3. Please specify what additional educational and outreach activities were conducted in this reporting year.

Direct Mail—TRC mailed a postcard to approximately 650 contacts at HVAC contracting businesses in Maine. The mailing list was sourced from D&B Zap data. TRC conducted the mailing in the spring and repeated it in the fall.

The spring mailing used the same art as the previous year. For the fall mailing TRC redesigned the card (see Exhibit 4) to better align it with the current branding and improve the messaging.

Exhibit 3: Tip-in Insert *HVACR Business* (front and back)

And we're the ones who make it easy.

We know you have a lot to do in a day and the last thing you want is a hassle. Which is exactly why, when it comes to recycling mercury thermostats, keeping it simple is a must.

So the next time you complete a job, hang onto the thermostats you remove then go to thermostat-recycle.org, find the nearest HVAC wholesaler drop-off site that's part of our network and just drop them off. That's all you have to do.

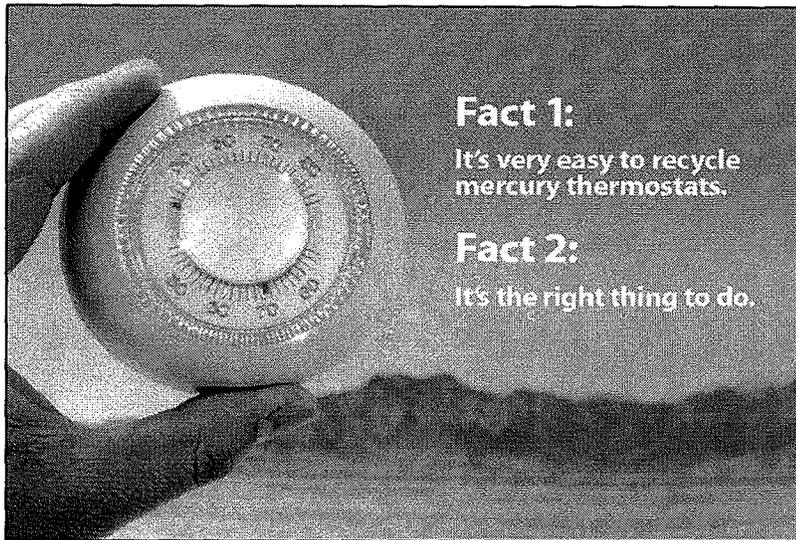

The service is free and easy. Very easy indeed.

 **Thermostat Recycling CORPORATION**
AN ENVIRONMENTAL SERVICE COMPANY
www.thermostat-recycle.org
1000 WASHINGTON STREET, SUITE 100, BOSTON, MA 02111

These HVAC wholesale distributors are proud to be TRC collection partners.

Exhibit 4: Updated Postcard Art

There's \$5 in it for you for every thermostat you recycle.

(We think that's a fact you can live with.)

While we know you're all about complying with state law, we also know that sometimes a little incentive doesn't hurt. Which is why when you properly recycle mercury thermostats through us, you'll get a coupon worth \$5 for each one you drop off. Go to thermostat-recycle.org to find the drop-off site near you. The service is free and it helps us help you protect the environment.

Recycle thermostats through TRC, it's smart and easy. And there's five bucks in it for you.

AN INDUSTRY-FUNDED NON-PROFIT

888.266.0550 | www.thermostat-recycle.org

Tradeshows—TRC attended and exhibited at the following trade shows relevant to Maine:

January 31-February 2: AHR Expo. Las Vegas. AHR Expo is the largest national trade show for the HVACR industry. TRC staff exhibited and promoted the program to HVAC contractors, manufacturers and distributors. The show had a total registered attendance of over 53,000. Specifically, 944 attendees were from New England.

February 15 – 17: Air Conditioning Contractors of America Indoor Air Expo, San Antonio, Texas. Representatives from over 200 HVAC contracting businesses attended the show.

May 22-26: National Association of Oil and Energy Service Professionals. Hershey, PA. This was OESP's annual convention and trade show. Nearly 2,700 HVAC professionals attended this show, which targeted service managers for HVAC firms that install and repair oil fired furnaces (about 80% of Maine homes heat with oil).

October 23-26: Heating Airconditioning and Refrigeration Distributors International (HARDI). Maui, Hawaii. TRC exhibited and participated in the "Booth Program," which provides for 1-on-1 sessions with senior executive staff from HARDI member companies. This event targeted representatives of approximately 80% of the wholesale market for HVACR products. TRC also presented the inaugural Thermostat Recycling Award to three HVACR distributors recognizing their support of the program.

Website—TRC continued to update the website with information pertinent to its various audiences. Notably, a scrolling banner was added to the homepage which showcases the logos of TRC's major collection partners. TRC also added materials co-branded with the Heating Air Conditioning Refrigeration International (HARDI) to the site. HARDI members represent over 80% of the HVAC wholesale distribution market in the U.S. and these materials were designed specifically for its members use.

TRC continued to update its data management systems in 2011. It is now able to make real-time edits to collection locations listed on the site, improving both the timeliness of changes and their accuracy.

Promotional Tool Kit—Concurrent with the launch of the website in 2010, TRC added high resolution templates of a number of promotional items. These items are available for use by TRC collection points at no additional cost to aid them in promoting the program to their customers. Items include a poster, bill stuffer, invoice template, cling sticker, banner, postcard and print advertisement. In 2011, TRC added point of sale cards and two new posters to the kit. TRC also put the new posters and this version of the cling-sticker in inventory and began distributing these items to collection sites.

Exhibit 5: New Program Collateral

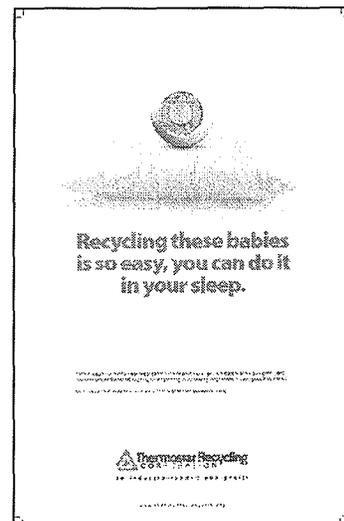

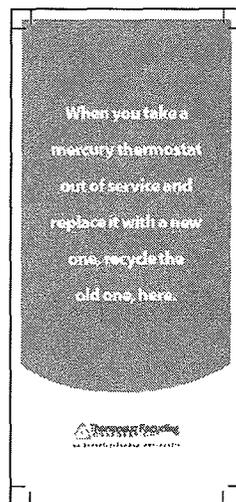

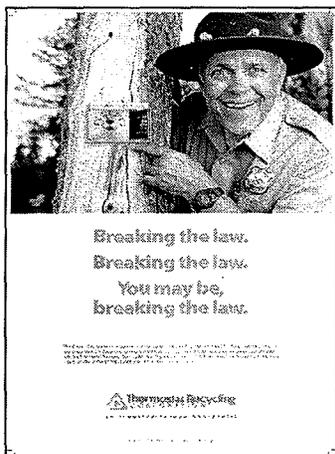

Table 1: Earned Media

Publication/Website	Month	Coverage	Readership/Reach
<i>Air Conditioning, Heating & Refrigeration News</i>	January	Article on thermostat recycling and TRC	111,000
<i>RSES Journal</i>	January	TRC & HARDI partnership	18,000
<i>HVACR Business</i>	April	Guest Column thermostat recycling	33,000
<i>Indoor Comfort News</i>	June		25,000
<i>Air Conditioning Today</i>	June	2010 TRC annual report	n/a
ACCA-Hot Air! Blog	July	TRC program	n/a
Wholesale Observations (HARDI)	July	TRC program	n/a
<i>Demolition Magazine</i>	July/August	Proper management of mercury	n/a
<i>Indoor Comfort News</i>	July	2010 TRC annual report	25,000
<i>1800recycling.com</i>	September	Recycling old thermostats	N/A
<i>Contracting Business</i>	October	Thermostat recycling awards	29,000
<i>Indoor Comfort News</i>	October	USACD thermostat recycling	n/a
<i>Supply House Times</i>	October	Thermostat recycling awards	12,800

Earned Media—TRC generated considerable positive media attention in 2011. TRC made a concerted effort in 2011 to generate stories on the program. Most notable was the four page article in the *Air Conditioning, Heating, and Refrigeration News (The News)* which included a TRC provided table on mercury thermostat laws. *The News* is the leading industry publication.

4. Please specify what additional education and outreach activities are planned for the next calendar year.

As part of its overall marketing strategy, TRC among other things will:

- Continue to attend and exhibit at national and regional trade shows in 2012.
- Continue to maintain and update its website in an effort to increase traffic and provide more on the program.
- Continue efforts to engage HVAC wholesale distributors to increase the level of participation in the program.
- Continue bi-annual postcard mailings to Maine HVAC contractors.
- Continue the mercury thermostat recycling awards with HARDI.

Due to the early reporting deadline in Maine (the majority of TRC's annual reports are due April 1) TRC has yet to complete its 2012 marketing plans and at this time is unable to commit to a specific paid advertising strategy.

5. Please provide a list of TRC members and their contact information

Please see Appendix B

6. Other comments or recommendations.

By statute the mercury-containing thermostat program goal for 2010 is 160 pounds of mercury. TRC efforts will contribute 46.36 pounds to the collective goal.

Maine remains the most costly and difficult recycling program for TRC to administer. TRC and its members fully support the Department's efforts to review this program and explore ways of improving both its efficacy and efficiency of the Maine program. Below TRC reiterates and in some cases expands on recent comments to the Department.

- **Department Compliance Assistance:** It is our view the current contractor and wholesaler compliance assistance program lacks structure. We have found guidance offered to generators and collection sites has been incomplete, inconsistent, and unfortunately in many cases interfered with TRC program operations.
- **Coordination/Collaboration with the Department:** TRC deeply appreciates your willingness to engage in a constructive dialogue. The next step is to begin to coordinate and collaborate on program activities. Areas where there are opportunities for collaboration include program outreach, collection site assessment, and stakeholder engagement.
- **Reducing Abuse within the Incentive Program:** We appreciate the Department's acknowledgement that the program has been abused by some. We remain concerned by allowing, and in some cases encouraging, collection site staff to collect incentive payments the Department has created an incentive not to promote the program.

We respectfully disagree with the July 11, 2011 guidance provided to the Department by Assistant Attorney General Nancy Macirowski. Reading the statute as whole, it is quite clear the intended recipients of the incentive are the generators of the waste, meaning the person who removed the thermostat from service.

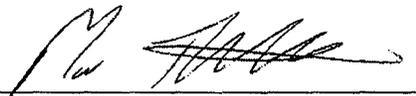

We note the statute (§ 1665-B(2)(E) and § 1665-B(2)(F)) specifically states the financial incentive is for the "return" by a technician, contractor, or homeowner of each mercury thermostat to an established recycling collection point. Once the thermostat has been delivered to that point (e.g. HVAC wholesale distributor) there is nothing further to incent.

As we have previously reported, the generator returns the thermostat(s) to a collection point but forgoes the incentive; subsequently an employee of the collection location claims the payment. Contractors, technicians, and homeowners have well defined meanings within the trade and are understood not to include staff at HVAC wholesale distributors, retail establishments, or transfer stations. As such, employees of recycling collection points were never intended to be recipients of the incentive payments since the thermostat had already been "returned" to the collection point.

We again note, the Vermont Department of Conservation concurred with our interpretation of the statute and in Vermont, collection point staff is prohibited from collecting incentive payments.

- Simplifying the Administration of the Incentive Program: TRC has documented numerous problems with the incentive program in prior correspondence and reports. The system is complex and has multiple points of failure outside of TRC's control. TRC has made a best effort to work within these limitations, but some simple changes to make it consistent with Vermont's program would ease the administrative burden.
- Developing better performance metrics: The current performance goal of 160 pounds is based upon a flawed metric. The assumptions used to develop this goal were not empirically based and represent little more than guesses. Other states including Vermont, New Hampshire, Iowa, and California have all recognized this methodology's deficiencies and opted not to emulate it. No one knows the remaining installed base of mercury thermostats in Maine or the number that become waste annually. As the program has matured there is a need for a better means of assessing performance.

Respectfully Submitted by: Mark Tibbetts
Executive Director
January 30, 2012

January 31, 2011

Mr. James Brooks, Acting Commissioner
Department of Environmental Protection
17 State House Station
Augusta, ME 04333

Ms. Ann Pistell
Department of Environmental Protection
17 State House Station
Augusta, ME 04333

Subject: Thermostat Recycling Corporation's 2010 Annual Report

Dear Mr. Brooks and Ms. Pistell:

Attached is TRC's annual collection report for calendar year 2010. TRC has made its best effort to be responsive to the Department's request for expense and collection data.

TRC would like to take the opportunity to summarize a few of its major accomplishments in 2010.

- Notwithstanding continued economic challenges for the HVAC industry, the national recovery of thermostats increased by 29 percent, keeping almost 1,900 pounds of mercury out of landfills and municipal solid waste incinerators.
- Industry participation in TRC continued to grow and by year end, TRC represented 29 manufacturers that historically branded and distributed mercury switch thermostats.
- TRC continues to see substantial growth in access to the program, adding over 700 new collection locations in 2010. TRC saw solid growth in all collection location types in 2010.

Unfortunately, we did not see similar results in Maine. Collection growth in Maine was relatively flat in 2010, despite our and the Department's efforts to promote and expand the program.

Since legal requirements to ensure waste mercury thermostats are diverted from landfills and municipal solid waste incinerators in Maine have now been in force for over nine years, we respectfully suggest it is appropriate to review Maine's mercury thermostat recycling program at this time. While TRC continues to strongly support the intent of the law, we have been and remain critical of certain aspects, including, by way of example, the cumbersome financial incentive program imposed on manufacturers, and urge the Department to review the program and to work with us to make recommendations for simplifying its administration.

We look forward to working with the Department and other stakeholders if it opts to conduct such a review.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", written over a horizontal line.

Mark Tibbetts
Executive Director

Maine DEP Thermostat Collection Report Form For Calendar Year 2010 Activities.
Due January 31, 2010

Directions: This form may be completed electronically. Please provide the following information on thermostat collection and recycling efforts in Maine.

I. Thermostat Data

Table 1. Thermostat Count by Manufacturer

	Total number of Thermostats by Brand Holder	Total Mercury Switches	Pounds of Mercury

Table 2. 2010 Thermostat Recovery Totals by Location

Please copy the attached table in an Excel spreadsheet format with the following information, please use font 12.

Please See Appendix B

Table 3. 2010 Non-Qualifying Thermostat Totals

	Mail-back (Homeowner Program)	Retail	Wholesale	Contractor	HHW
Total Received	32	1011	4635	554	291
Non-Qualifying due to no Cover ¹	n/a	n/a	n/a	n/a	n/a
Non-Qualifying due other reason ²	n/a	n/a	n/a	n/a	n/a
Total	32	1011	4653	554	291

1. Please list towns from which TRC received Homeowner thermostats through mail-back program. Use separate sheet.

Please See Appendix C

2. Number of TRC Thermostats qualifying for incentive payment?

4,490³ (84% of total received)

3. Number of thermostats not qualifying for payment?

990 thermostats were recovered without incentive coupon bar-code.

TRC voluntarily pays the incentive on thermostats received without covers. If an eligible (i.e., contains mercury and has coupon attached) thermostat is received without a matching remittance coupon, that thermostat remains in the system until such a time a remittance coupon is received that matches that thermostat. At that point TRC will issue payment.

TRC recovered 37 items with bar-coded stickers attached that were deemed ineligible (e.g., non-mercury thermostat, other mercury containing device, non-mercury containing device, or mercury thermostats collected through retail outlet). Additionally, TRC received 113 remittance coupons that were incomplete, damaged,

¹ TRC did not track collections in this manner. See response to question 3.

² TRC did not track collections in this manner. See response to question 3.

³ This figure represents the count of mercury thermostats received at TRC's processing facility in 2010 that either had an incentive coupon attached or came from sources that do not require coupons for payment (retail and mail-back).

or otherwise illegible that resulted or will result in non-payment.

II. Costs

Table 4. Thermostat Recycling Program Costs

Program Component	TRC Program	Maine Incentive Program*
TRC Staff and Administration [†]	\$236,063	\$1,294
Postage	\$1,848	n/a
Phone	\$186	n/a
Recycling Costs	\$300,096	n/a
Maine Incentive Payments		\$31,610
Maine Collateral Design		n/a
Printing of Maine Materials		n/a
Maine Marketing and Promotion ^{††}		\$505
Marketing and Promotion ^{†††}	\$74,897	
Legal Fees	n/a	\$7,349
Other ^{††††}	\$59,845	n/a
Total	\$672,935	\$40,758

* TRC allocates costs supporting the Maine Program when practicable. It is unable to allocate most costs to Maine as TRC has no ready means to isolate and apportion costs for activities in Maine. Certain materials are used and/or activities are conducted concurrently in other states (i.e. printing of collateral such as posters or direct mail) and TRC cannot isolate the costs for those activities strictly to Maine. TRC is also unable to apportion recycling costs to Maine, as it would underreport actual costs to process thermostats as additional labor is necessary to process thermostats from Maine due to the incentive program.

† TRC Staff and Administration includes costs for staff, certain consulting services, corporate fees, copying, shipping/next day (does not include costs to ship recycling containers), toll-free line for Maine/Vermont, wireless, conference calls, software/hardware, banking fees, recycling container expense, and audit.

†† Maine Marketing and Promotion includes costs associated with advertising in the Maine "weeklies." Costs associated with other Maine promotional activities including direct mail, trade shows, etc. could not be isolated and apportioned to Maine.

††† Marketing and promotion includes direct costs to promote the program nationally and in certain states, including Maine. It does not include TRC staff time devoted to promoting the program (TRC estimates at minimum 50% of staff time is expended on promoting the program). These include costs for marketing consulting, website development, advertising, graphic design, trade shows (not including travel to these events), public service announcements, direct mail, printing, meeting

registration fees, and sponsorships. As a small state, there are limited direct channels to market to Maine contractors. As such, TRC also conducts marketing and promotion targeting HVAC contractors and distributors nationally, some of which operate in Maine.

†††† "Other" includes costs for travel, overhead, insurance, supplies, memberships/subscriptions, Vermont incentive payments, and miscellaneous expenses.

III. Education and Outreach

1. *Paid Advertising: Please include ad copy, a list of papers and dates*

Weeklies: TRC conducted paid advertising (Exhibit 1) in the following Maine "weeklies." *Rumford Times, Courier Gazette, Camden Herald, Moosehead Messenger, and Ellsworth American.* The ads ran in February 2010.

Exhibit 1: Image of Maine "Weekly" Advertisement

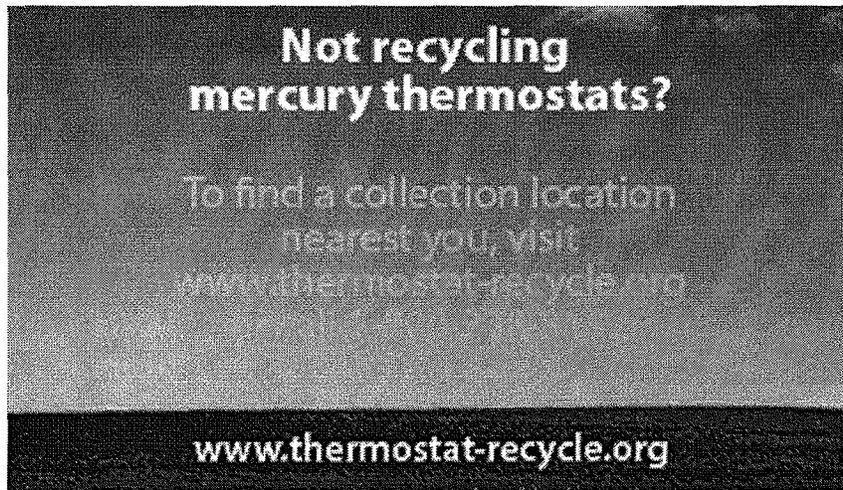

Websites: TRC also ran rotating banner advertisements (Exhibit 2) on the websites contractingbusiness.com and Hvac-talk.com for the months of April, May and June. Both sites are national and target the HVAC contracting audience. Contractingbusiness.com averages 59,000 page views and 27,000 unique visitors

per month. Hvac-talk.com averages 1.5 million page views and 221,000 unique visitors per month.

The advertisement was animated with scrolling images of thermostats, the final message directed contractors to TRC's website.

Exhibit 2: Web Banner Advertisement

2. *PSA and Radio & TV: Please include a description of any changes to the PSA's, resubmission to the stations, or relevant information.*

TRC did not resubmit radio PSA's to stations in the Maine market in 2010.

3. *Please specify what additional education and outreach activities were conducted in this reporting year.*

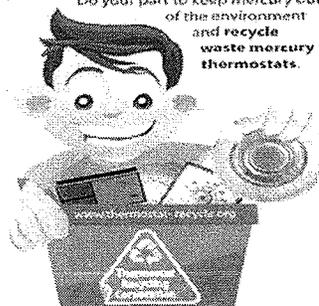

TRC Recycling Poster: TRC mailed two (2) copies of its "consumer" poster (Exhibit 3) to each town office in Maine (approximately 500 towns) requesting the

Exhibit 3: Recycling Poster

Working Together to Keep Mercury Out of the Environment

Many old thermostats contain mercury,
and it's illegal to dispose of them
in the trash.

Do your part to keep mercury out
of the environment
and recycle
waste mercury
thermostats.

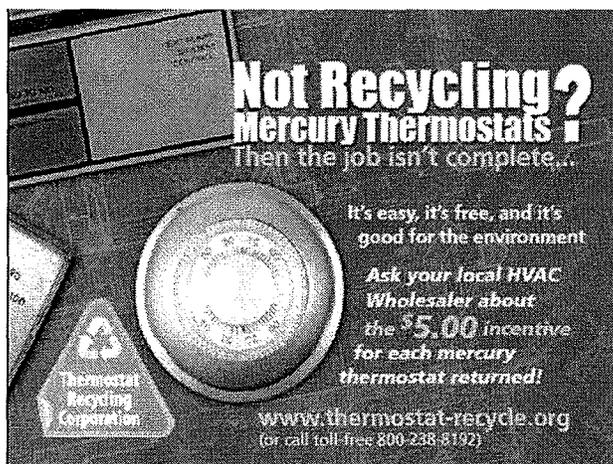

Please ask the staff for more
information or visit our website at:
www.thermostat-recycle.org

poster be hung at the transfer station or other appropriate location within the community. The letter also served as a reminder of Maine's disposal ban on mercury-containing products. A copy of the transmittal letter is available in Appendix A.

Direct Mail: TRC developed and mailed a postcard (Exhibit 4) to approximately 625 HVAC contractors in Maine. The mailing list was sourced from D&B Zap data. TRC conducted the mailing in the spring and again in the fall of 2010.

Exhibit 4: Front of Postcard for Direct Mail to Maine HVAC contractors

Earned Media: TRC drafted and submitted a short article on Maine's recycling law to the following stakeholder groups in Maine: Maine Energy Marketers (formerly Maine Oil Dealers Association) and Maine Plumbing, Heating Cooling Contractors Association (MPHCCA). MPHCCA acknowledged receipt of the article and indicated they would email an update to its members and include information on the program in an upcoming newsletter.

TRC also received coverage in national trade press on numerous occasions. The program was covered in *Indoor Comfort News* (June 2010, July, 2010, and October 2010). The HARDI/TRC media release (December, 2010) was covered in *Waste and Recycling News* and *Air Conditioning Today*. TRC's program also received extensive coverage in the *HARDI Convention Daily* (distributed to all HARDI annual convention attendees).

Local, Regional, and National Trade Shows: TRC attended and exhibited at the following trade shows relevant to Maine:

January 25-27: AHRExpo: Largest national trade show for HVACR industry. Event was held at Orlando Convention center. TRC staff exhibited and promoted program to representatives of both HVAC contractors and HVAC distributors.

March 19: Maine Plumbing, Heating and Cooling Contractors Association annual trade show at the Augusta Civic Center. Event targeted Maine-based plumbing and heating contractors

May 24 and 25: National Oil Heat Service Managers annual meeting and trade show, Providence, Rhode Island. Event targeted service managers for oil fired furnaces and drew New England based contractors due to show's location in Providence. TRC also sponsored the opening reception for additional visibility at the event.

September 23-24: Comfortech. Comfortech is a national trade show for HVAC contractors sponsored by Penton Media, publishers of *Contracting Business*.

October 23-26. Heating Airconditioning and Refrigeration Distributors International (HARDI) annual meeting. TRC exhibited at the event, which targets representatives of approximately 80% of the wholesale market for HVACR products.

New Website: In October 2010 TRC launched a new website. The site updated and reorganized content; making pertinent information on the program to various audiences more accessible.

Promotional Took-kit: Concurrent with the launch of the new website, TRC added high-resolution templates of a number of promotional items. These items are free to use by TRC collection points. Developed expressly for HVAC wholesale distributors, these items are available at no cost to TRC collection points to assist them in promoting the program to their customers. Items include a poster, bill stuffer, invoice template, cling sticker, banner, postcard, and print advertisement.

4. *Please specify what additional education and outreach activities are planned for next calendar year.*

See recommendation number three below regarding Maine-specific activities.

As part of its overall marketing strategy, TRC among other things will:

- Attend several national and regional industry trade shows in 2011.
- Expand its advertising buy in www.contractingbusiness.com and www.hvac-talk.com to 4 months (spring and fall). TRC is also developing a new advertisement for this campaign.
- Place a postcard insert in *HVACR Business* (April and September issues) that will go to 12,000 subscribers in certain states, including Maine, with mercury thermostat disposal bans and/or mandates for recycling.
- Update its website to recognize and promote HVAC distributor participation.
- Directly recruit HVAC distributor participation into the program and encourage distributors to actively promote the program to their customers.
- Conduct direct mail in certain states, including Maine, informing contractors on mandate to recycle and availability of TRC program.

- With HARDI, develop an annual award program that recognizes the HVAC distributors' contributions to the success of the program.

5. *Please provide a current list of TRC members and their contact information.*

Please See Appendix D

6. *Other comments or recommendations?*

By statute the mercury-containing thermostat collection program goal for 2010 is 160 pounds of mercury⁴. TRC efforts will contribute 44.9 pounds to the collective goal.

TRC recovered 149 more thermostats in 2010 than 2009, or the equivalent of 2 or 3 more containers. Growth in recovered thermostats from wholesale locations and HVAC contractors were down and retail collections were flat compared to 2009. The only area in which TRC saw an increase was from the HVAC contractors directly participating in the program. Recoveries from the mail-back program continued to decline, with only 32 thermostats being recovered through this channel in 2010.

The flattening of growth occurred despite expanded education efforts in 2009 and 2010. TRC continued its direct mail campaign in 2010; attended the only in-state trade show for the industry; provided recycling posters to all Maine municipalities in 2010; and, despite reservations on its utility, TRC also advertised in the Maine "weekly" newspapers. In addition to TRC's marketing and promotion efforts, the Department sent letters to approximately 9500 licensed contractors in Maine promoting the retail program. It is notable that the Department's marketing effort had no appreciable impact on retail collections for 2010. Retail collections increased by 14 thermostats last year.

The slowing in growth to some degree likely reflects the maturation of the program. The collection of this product has been actively promoted in Maine since at least 2005. However, because there is no reliable means to estimate the number of thermostats that annually become waste, it is challenging to characterize the program's performance.

Aspects of Maine's thermostat law have been in effect since 2002 and TRC suggests it is appropriate to review and assess various stakeholders efforts and the resources they are allocating in Maine to divert waste mercury thermostats from the solid waste stream.

TRC continues to support the intent of Maine law, and does not seek to debate the continuation of manufacturer-funded efforts to collect waste mercury thermostats in Maine or in other states. However, from the onset TRC and its member manufacturers have opposed aspects of the Maine program, as unnecessary,

⁴ TRC respectfully suggests this goal is arbitrary. The data used to generate this goal are anecdotal and never have been validated.

administratively complex, and vulnerable to abuse. Examples of issues we have encountered include:

- The Department, in the past, has insisted TRC engage in marketing strategies that we advised would not yield benefits commensurate with the cost. The debate has primarily revolved around consumer-facing promotion of the program. Because 90% of new thermostats are sold at wholesale, TRC places a priority on marketing to the HVAC trades. However, the Department has insisted TRC market directly to consumers through print advertising, an effort we view as inappropriate and not effective.
- A singular focus on manufacturers as the root cause of problems with the program and the only party that has responsibility to address them. TRC relies on others to collect and arrange transport of waste thermostats to our facility. Additionally, manufacturers are not the generators of the waste. In our view there are demonstrable conceptual flaws with aspects of the collection program in Maine. In the past, we believe our reports on problems with the program were viewed by Staff as attempts to obstruct the implementation of the program as opposed to reasonable attempts to engage in a constructive dialogue.
- Administrative costs of providing the financial incentive are greater than the value of most payments. The majority of payments have been between \$5 and \$15. However, TRC estimates it costs upwards of \$15 to administer the handling of coupons and the issuance of each check.
- Further we have not seen analytical data demonstrating that the incentive is in itself is contributing to increased mercury recycling in Maine. As TRC notes below, TRC has seen equal, if not greater growth in collections in other states without the imposition of the incentive. In fact, we believe the incentive unfairly burdens the manufacturers, diverts resources, and has limited benefit.
- Given the mercury disposal ban in Maine, the thermostats need to be recycled and TRC acknowledges its important role in providing cost free mercury thermostat recovery. However, the incentive payments are neither timely nor direct, creating little independent incentive to recycle. TRC members do not have a direct contractual relationship with contractors and homeowners who are not TRC's members' customers. As a result, we must rely on the coupons distributed by the collection points and on the collection points to ship us the recycling containers containing the thermostats. As it may take months to fill a container, HVAC contractors recycling thermostats at HVAC wholesale distributors are sometimes forced to wait months for payment, which discourages participation in the incentive. Significantly, on average 20% of the thermostats collected over the last three years had *no* request for an incentive payment. Moreover, as reported to the Department in TRC's 2009 report, at minimum, 20% of incentive payments since the program's inception have gone to either individuals or businesses that are either HVAC wholesale collection points or their staff, persons the law did not intend to incent.

Recycling behavior has changed in Maine, but the change in behavior is not solely attributable to the incentive, if at all. The change of behavior is more related to the disposal ban, to TRC providing an avenue for cost-free mercury recovery, and to the targeted education and outreach program funded by TRC.

- At face value, the results of the program seem positive: collections are up in Maine and the state enjoys one of the highest collection rates in the nation by some measures. However, if one looks at the data in more detail, the results of the financial incentive are not so clear: TRC examined the results of other mandatory collection programs and found in the first two years of operations, the average increase in collections in all states was 46%. Of the five states, the two with incentive programs ranked 4 and 5 in growth of collections (Maine 39% and Vermont 38%).
- TRC has documented to DEP clear instances of abuse, if not fraud, within the program. TRC informed Maine DEP of these activities in its official 2009 program report, noting that a significant percentage of payments had gone to parties not specified in the law. At least 20% of payments have gone to staff at collection points, rather than to HVAC contractors/technicians or homeowners, the intended recipients. Moreover, TRC has documented to DEP the outright theft of thermostats at one location. To our knowledge, the Department has not investigated these issues.

TRC has reported direct expenses of over \$230,000 on the Maine program during its four years of operations, including \$88,000 in direct payments for the return of waste mercury thermostats. This figure does not include the costs to transport and process the waste, TRC staff time, or any of TRC members' time spent engaged on the program. The program in Maine is the most costly of any of the nine mandatory mercury thermostat collection programs TRC is administering.

Evidence continues to build that refutes the contention the financial incentive is an effective policy tool for increasing and/or maintaining the recovery rate of mercury thermostats. TRC sees scant evidence the incentive payment is in fact motivating significant numbers of HVAC contractors to participate in the TRC program.

TRC Recommendations.

1. TRC seeks guidance from the Department on the eligibility of certain individuals and organizations to receive incentive payments that seem contrary to the intent of the law. TRC also recommends the Department open an investigation into payments to individuals and/or businesses that seem contrary to the intent of the law and take appropriate action upon a determination of wrongdoing.
2. TRC again recommends the immediate suspension of the mail-back program. The limited numbers of thermostats coming in through the mail-back program are, with few exceptions, coming from southern and central Maine. The mail-back program

was created to provide access to the program in northern and eastern Maine. The combination of HHW and retail collections now provides convenient access to all Maine residents. At this point the program is duplicative and no longer justifiable.

3. TRC respectfully suggests the key to maximizing collections is maintaining a high level of visibility of the program where HVAC contractors conduct business—HVAC wholesale distributors. TRC has enjoyed recent success in engaging HVAC distributors to voluntarily expand promotion of the program to their customers and is pursuing this approach nationally. This approach works, as the basic voluntary TRC program is simple to administer and the distributor recognizes the value of offering the program to their customers.

TRC recommends the Department, in consultation with HVAC contractors, HVAC distributors, manufacturers and other industry stakeholders, identify collaborative strategies for stakeholders to employ to ensure widespread compliance with Maine's mercury thermostat disposal ban and contractor mandate to recycle. These strategies should be used to inform and guide TRC and Departmental efforts in promoting the program in Maine.

4. TRC respectfully suggests the Department reevaluate the statutory goals for the program. The basis for these goals is a "methodology" that relies on anecdotal data that has not been independently corroborated.
5. TRC requests the Department review its guidance for both the "contractor" and "homeowner" program and make recommendations to streamline the administration of the program. This review should include an assessment on the effectiveness of the incentive program.

APPENDIX A: LETTER TO MAINE LOCAL GOVERNMENTS

1300 North 17th Street • Suite 1762 • Arlington, VA 22209

www.thermostat-recycle.org

March 16, 2010

RE: Educating Maine residents on the proper disposal of mercury-containing thermostats

Dear Local Government Leader:

On behalf of Thermostat Recycling Corporation (TRC), enclosed are two copies of a poster promoting the recycling of mercury-containing thermostats.

As you may be aware, under Maine law it is illegal to dispose of mercury-containing products in solid waste.

TRC, in accordance with its statutory education and outreach efforts, has developed the enclosed poster to help local governments inform their communities on the requirement to properly dispose mercury-containing thermostats, as well as the available resources to help residents comply with the law. Please display these posters at your community's solid waste or household hazardous waste collection site or other appropriate locations.

For more information on TRC's efforts to promote the recycling of mercury containing thermostats, please visit www.thermostat-recycle.org. If you have questions about manufactures' efforts to prevent mercury from being released to the environment, please contact Mark Tibbetts at 703-841-3246.

Respectfully,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", with a long horizontal flourish extending to the right.

Mark Tibbetts
Executive Director

Enclosures

Augusta, ME 04333-0017

Subject: Thermostat Recycling Corporation's 2009 Annual Report

Dear Ann:

Attached is TRC's 2009 annual collection report for the Department. To the extent practicable TRC has made its best effort to be responsive to the Department's request for expense and collection data.

TRC would like to take the opportunity to summarize some of its major accomplishments in 2009.

- Notwithstanding a severe recession that depressed the replacement market for thermostats, the national recovery of thermostats increased by 14.8 percent, keeping almost 1500 pounds of mercury out of solid waste.
- Industry participation in TRC continued to grow and by the end of the year TRC represented 28 manufacturers that historically branded and distributed mercury switch thermostats.
- TRC also saw substantial growth in access to the program, the number of recycling containers at participating collection locations increased by 30%. TRC saw solid growth in all collection location types in 2009.

TRC built upon the prior years efforts in Maine and saw a 14% increase in the number of recovered mercury thermostats over the prior year. TRC was pleased to see the increase in light of our targeted outreach efforts in 2009.

However, TRC remains troubled by many aspects of the Maine program. Entering into what will be the third year of the incentive program; evidence continues to mount demonstrating that the financial incentive, as implemented in accordance with Department guidance, fails to achieve its purported public policy objective. For instance:

- TRC determined that, at minimum, 20% of incentive payments have gone to persons that the law had not intended to incent.
- Significant numbers of program participants are recycling thermostats but opting to forgo the financial incentive (28% in 2009).

Data suggests that the generator (homeowner or contractor) opted to forgo the financial incentive on almost half of all returns.

After expending over \$250,000, the incremental growth in mercury recovered in Maine remains disappointing. TRC recommends the Department, in consultation with stakeholders, review this program and also investigate payments that are made that appear contrary to the intent of the law.

Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", is written over a horizontal line.

Mark Tibbetts
Executive Director

Maine DEP Thermostat Collection Report Form For Calendar Year 2009 Activities.
Due January 31, 2010

Directions: This form may be completed electronically. Please provide the following information on thermostat collection and recycling efforts in Maine.

Total	116	997	4760	234	267

1. Please list towns from which TRC received Homeowner thermostats through mail-back program. Use separate sheet.

See Appendix B

2. Number of TRC Thermostats qualifying (e.g. mercury-switch thermostat with bar-coded sticker attached) for incentive payment?

4,579 (72% of total thermostats collected)

3. Number of thermostats not qualifying for payment?

No Cover: n/a

No bar-coded sticker: **1,795**

TRC recovered 75 items with bar-coded stickers attached that were deemed ineligible (e.g. non-mercury thermostat, other mercury containing device, non-mercury containing device, or mercury thermostats collected through retail outlet). Additionally, TRC received 63 remittance coupons that were incomplete, damaged, or otherwise illegible that resulted or will result in non-payment.

II. Costs

² TRC did not track collections in this manner. See response to question 3.

³ TRC did not track collections in this manner. See response to question 3.

Total	\$ 549,856.00	\$ 57,093.00

* TRC allocates all costs supporting Maine Program when practicable. It is unable to allocate staff and general administrative expenses to Maine with the exception of contractor that assists in processing incentive payments.

III. Education and Outreach

1. Paid Advertising: Please include ad copy, a list of papers and dates

TRC placed animated banner advertisements in Maine's major daily newspapers. The ad (a copy of the static image is below) had a scrolling message that stated:

"If you install a new thermostat you may be replacing one that contains mercury".

Scrolling to:

⁴ TRC Staff and Administration includes staff, corporate fees, copying, shipping (excluding shipping recycling containers), telecommunications (excludes telephone), software/hardware, website, banking fees, bins expense, and audit.

⁵ TRC has no means to isolate postage costs for Maine. However, the mailing of incentive payments and related activities is accounts for 40% - 60% of TRC's annual postage cost.

⁶ This includes costs to fulfill orders for new recycling containers, collection/transport of waste, dismantling of thermostats, recycling of waste, database management, and administration of these activities.

⁷ TRC has no means of isolating design costs for Maine as TRC designs materials for use in multiple states.

⁸ This includes costs for printing incentive coupons, retail coupons, and postcards mailed to Maine HVAC contractors. It excludes cling stickers and other program collateral such as instruction sheets.

⁹ This is the cost of web-based advertisements and does not include direct mail costs, TRC staff time to place advertisements, development/placement of PSA, and efforts to attract earned-media. Allocating these costs is not possible for instance TRC used the same PSA in Vermont.

"For more information on the proper disposal of mercury thermostats & drop-off locations visit www.thermostat-recycle.org.

TRC placed online banner advertisement on www.pressherald.com, www.kjonline.com, www.onlinesenetinal.com. TRC placed two different sizes 728x90 and 160x600 and ordered a minimum of 200,000 impressions. The advertisement started on September 21, 2009 and ran for approximately 30 days.

TRC also placed the online banner advertisement on www.bangordailynews.com. TRC placed a homepage advertisement sized 300x250 and ordered a minimum of 200,000 impressions. The advertisement started on September 20, 2009 and ran for approximately 30 days.

Exhibit 1: Static Image of Web Advertisement

TRC also placed a print advertisement in the August issue of *Contracting Business* and ran a 30 day web ad on www.hvactalk.com.

2. PSA radio and TV: Please include a description of any changes to the PSAs, resubmission to the stations and other relevant information.

TRC contracted VNR-1 communications to update and record a new PSA for Maine and Vermont. The script for the PSA is below.

Script

(UP-TEMPO MUSIC, UNDER THROUGHOUT)

ANNCR: Everyone looks for ways to save money and go green these days and one of the smartest and simplest ways to save on energy costs and protect the environment is to replace your old thermostat with a new ENERGY STAR rated programmable model.

Just remember that the thermostat you're replacing may contain mercury, and Maine and Vermont residents' are eligible to receive five dollars from the Thermostat Recycling Corporation, for each mercury thermostat recycled.

Get information on how and where to recycle your mercury thermostats by visiting the Thermostat Recycling Corporation's website at Thermostat-dash-recycle-dot-O-R-G.

www.thermostat-recycle.org

TRC submitted the new PSA to Maine radio stations in July, 2009.

3. Please specify what additional education and outreach activities were conducted in this reporting year.

Cling Sticker—TRC developed and printed a multi-purpose cling sticker (7.5 x 6") for collection locations to post at their facility. The sticker was designed for use on a location's service counter, door, window, or wall.

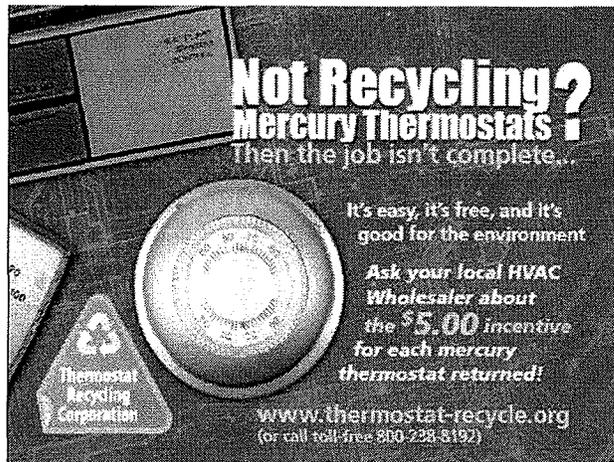

Exhibit 3: Cling Sticker (ME version had no agency logo at base)

Direct Mail—TRC developed and mailed a postcard to approximately 625 HVAC contractors in Maine. The mailing list was sourced from D&B Zap data.

The initial mailing was in August 2009 and TRC repeated the mailing again in October 2009.

Exhibit 4: Front of Postcard for Direct Mail to Maine HVAC contractors

Earned Media: TRC drafted and submitted a short article and media release to the following stakeholder groups in Maine: Natural Resources Council of Maine, Maine Oil Dealers Association, Associated Builders and Contractors, and Maine Plumbing, Heating Cooling Contractors.

4. Please specify what additional education and outreach activities are planned for next calendar year.

TRC will complete the tasks remaining from its agreement with the Department. This includes:

- Print Advertising: TRC will place print ads in Maine "weekly" newspapers in February 2010.
- Poster: TRC will develop, print and distribute 2 copies of a poster promoting mercury thermostat recycling to Maine municipalities.
- Bill Stuffer: TRC will explore option for utility bill stuffer.

Additionally, TRC will conduct the following activities in Maine in 2010

- Attend and exhibit at Maine Plumbing Heating Cooling Contractor annual meeting in Augusta in March 2010.
- Attend and exhibit at National Association of Oil Heat Service Managers Annual Meeting Providence, Rhode Island in May 2010.
- Draft and submit a short article and media release to stakeholder groups in Maine promoting the program.
- Reprint and mail postcard to HVAC contractors (approximately 600 contractors) two times in 2010.

5. Other comments or recommendations?

By statute the mercury-containing thermostat collection program goal for 2009 is 125 pounds of mercury. TRC efforts will contribute 44.454 pounds to the collective goal.

TRC, with the Department's concurrence, expanded outreach efforts in Maine in 2009 targeting both HVAC contractors and homeowners. TRC recovered 819 more thermostats over 2008, or the equivalent of 10 to 15 more shipments. Growth in recovered thermostats from wholesale locations and HVAC contractors were almost flat and TRC saw a slight increase from HHW locations. While recoveries from the mail-back program declined by 72%.

The results from the retail program are more encouraging. TRC recovered 997 thermostats through the retail program in 2009 albeit a majority of participating retail locations have yet to return a container.

The increase in recovered mercury is disappointing in light the extraordinary amount of time and expense incurred by TRC to administer the program in Maine. Since 2007, TRC has expended well over \$250,000, including \$58,000 in incentive payments, to support the collection program.

Evidence continues to build that refutes the contention the financial incentive is an effective policy tool for increasing the recovery rate of mercury thermostats. TRC sees scant evidence the incentive payment is in fact motivating significant numbers of HVAC contractors to participate in the TRC program. For instance in 2009 1,795 (27%) of thermostats recovered by TRC from Maine collection locations using the mail-back coupon¹⁰ had no request for payment—up from 13% in 2008.

Moreover, TRC is very concerned with the program's implementation in the state. The Maine statute, 38 M.R.S. §1665-B provides in paragraphs 2E, 2F, and 4 for the payment by manufacturers of a \$5.00 incentive payment to "contractors, service technicians, and homeowners" for the "return of each mercury-added thermostat to an established recycling collection point." The statute is clear that it is this limited group of persons who were to be incented to bring mercury thermostats to a collection point. Data suggests that a significant number of incentive payments are not going the persons who were to be incented to "return ... mercury-added thermostats to an established recycling collection point" — contractors/service technicians or homeowners. TRC has determined since the program's inception that collection locations and/or their staff --- persons in the chain of recycling *after the thermostat has reached an established collection point* --- received payments for 2,274 thermostats after they have been returned by someone else. At minimum, 20% of incentive payments since the program's inception have gone to either individuals or businesses that are either HVAC wholesale collection points or their staffs (See Exhibit 5 for analysis of payments to the top 60 recipients of payments). Additionally, there are a number of other persons who could not be identified as "contractors/service technicians

¹⁰ Individuals or businesses returning thermostats to participating retailers receive a \$5.00 discount on a purchase at the retailer for each qualifying thermostat returned.

or homeowners” who received incentive payments for an additional 1,132 returned thermostats. (See Exhibit 5). It is estimated that at least thirty percent (and maybe more) of the incentive payments have not gone to persons the law was designed to incent.

Both data points suggest that a substantial number of thermostats (potentially 50% or more in a given year) are being recovered by TRC where the contractor or homeowner either were 1) not informed of the financial incentive at the point of collection, or 2) opted to forgo the incentive.

TRC Recommendations

1) TRC recommends the Department, in consultation with manufacturers, wholesalers, and HVAC contractors amend its Guidance (December 2006) and modify the program to ensure its implementation is consistent with the statute including, but not limited to, ensuring that mechanisms are in place to protect against fraudulent claims on the return of thermostats and that administrative costs of the plan are minimized.

2) TRC recommends the Department open an investigation into payments to individuals and/or businesses that seem contrary to the intent of the law and take appropriate action upon a determination of wrongdoing.

3) TRC again recommends the suspension of the mail-back program. The limited numbers of thermostats coming in through the mail-back program are, with few exceptions, coming from southern and central Maine. The mail-back program was created to provide access to the program in northern and eastern Maine. The combination of HHW and retail collections now provides convenient access to all Maine residents. At this point the program is duplicative and no longer justifiable.

Submitted by: Mark Tibbetts, Executive Director

January 30, 2009

Ms Ann Pistell
Maine Department of Environmental Protection
17 State House Station
Augusta, ME 04333-0017

Subject: Thermostat Recycling Corporation's 2008 Annual Report

Dear Ann:

Attached is TRC's 2008 annual collection report for the Department. To the extent practicable TRC has made its best effort to be responsive to the Department's request for expense and collection data.

TRC would like to take the opportunity to summarize some of its major accomplishments in 2008.

- National collections increased by 18 percent and TRC recovered almost 1300 pounds of mercury in 2008.
- TRC expanded from four to over twenty members last year. TRC now represents approximately two-thirds of the manufacturers who historically sold over 60 different brand names of mercury thermostats.
- TRC also saw real growth in access to the program, the number of recycling containers at participating collection locations increased by 20%. TRC saw its best growth at household hazardous waste locations, with the number more than doubling to nearly 400 containers.

TRC also made significant strides in Maine in 2008.

- With a successful recruitment effort, TRC was able to eliminate the need for the multiple collection programs and streamlined collections for non-member brands.
- TRC implemented a new financial management system which facilitates both financial reporting and administration of the incentive program.
- TRC updated operating procedures and improved program performance on remittance of incentive payments.
- TRC, working with the Department, developed a program to facilitate thermostat collections at retail locations.
- TRC implemented the education and outreach program as agreed to and made additional efforts to raise awareness of the program in Maine.

TRC is continuing efforts on implementing the new website and implementing a national market effort. As the attached report indicates, we remain concerned with collection rates in Maine and the costs of implementing the program. Moving forward, we look to engaging the Department in a constructive dialogue on the best means to build on the previous year's efforts.

Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", is written over a horizontal line.

Mark Tibbetts
Executive Director

Maine DEP Thermostat Collection Report Form for Calendar Year 2008 Activities
Due January 30, 2009

Directions: This form may be completed electronically. Please provide the following information on thermostat collection and recycling efforts in Maine

I. Thermostat Data

	TSTATS	BULBS	Lbs. Mercury
Honeywell	5174	5653	35.05
White-Rodgers	300	359	2.23
GE	27	70	0.43
Nordyne	2	2	0.01
NOMS (other manufacturers) ¹	52	59	0.37
Loose Bulbs		<u>73</u>	<u>0.45</u>
Totals	5555	6220	38.54

1) TRC began tracking recovered mercury thermostats by brand in October 2008.

Table 2 – Please copy the attach[ed] table in an Excel spreadsheet format with the following information. (Please use font 12).

See Appendix A

Table 3

	T-Stat # mail-back	T-stat # Retail ¹	T-stat # Wholesale	T-stat # HHW	T-stat # Contractor
TRC Brands	422	n/a	4625	110	236
EPI Brands ²	n/a	n/a	n/a	n/a	n/a
Non-qualifying due to no cover ³	n/a	n/a	n/a	n/a	n/a
Non-Qualifying to other reasons ⁴	n/a	n/a	n/a	n/a	n/a
Total	422		4625	110	236

1) DEP did not begin retail bin distribution until December 2008, no retail collections in 2008

2) TRC did not track EPI thermostats by source- TRC received 162 thermostats from EPI in 2008. Please Note as of October 2008 TRC membership increased to 19 manufacturers and the EPI program was substantially modified. EPI is no longer collecting thermostats for non-TRC member companies, rather it is reimbursing TRC for TRC's costs associated with collecting and recycling non-member brand thermostats

3) TRC did not track collections in this manner. See response below.

4) TRC did not track collections in this manner. See response below.

1. Please list towns from which TRC received home owner thermostats though the mail-back program. Use Separate sheet.

See Appendix B

2. Number of non-TRC mercury thermostats received and forwarded to EPI

n/a

3. Number of TRC thermostats qualifying for incentive payment

4731

4. Number of thermostats not qualifying for payment—excluding those shipped to EPI

No cover: n/a No sticker: 662 No coupon: n/a Other: 31*

*TRC receives other mercury containing products or non-mercury thermostats with incentive stickers. For instance it received 14 thermometers with incentive stickers in bin from Falmouth Public Works.

II. Costs

Table 4

Program Component	TRC Program *	Maine Incentive Program
TRC Staff and Administration ¹	\$ 77,542	\$ 6,090
Postage	\$ 955	
Phone	\$ 1,751	\$ 6
Recycling Costs ²	\$ 160,405	
Maine Incentive Payments		\$ 22,605
Maine Collateral Design		
Printing of Maine Materials		\$ 6,053
Maine Marketing and Promotion ³		\$ 14,971
Membership Income	n/a	
Other ⁴	\$ <u>34,412</u>	\$ <u>33,239</u>
Total	\$ 275,064	\$ 82,965

* TRC classifies all direct costs supporting the Maine incentive program when practicable. It is unable to allocate general office expenses, labor (excluding contractor that assists in processing payments), and program overhead (for example insurance). TRC estimates that between 15 and 20% of the executive director's effort in 2008 was spent on Maine related activities.

1) TRC Staff and Administration includes TRC professional staff, supplies, and software/hardware.

2) Recycling Costs are paid in arrears- 2008 costs are actual 2007 costs and include costs for recycling containers and costs associated with fulfilling new bin orders, collection/transport of waste thermostats, maintaining collection database, and processing/recycling of waste thermostats.

3) Includes advertising costs and contractual costs for Maine based public relations consultant.

4) Includes corporate fees, insurance, website development, memberships/subscriptions, travel, banking fees, legal, printing, registration and miscellaneous expenses.

II. Education and Outreach

1. Newspaper Ads: TRC placed ads in all major Maine daily and weekly newspapers in February 2008 and again in October 2008. Generally the ad was 3.00rowcolumn x 5.50 inch. A total of 30 placements occurred.

Newspaper	1st Insertion	2nd Insertion	3rd Insertion	4th Insertion
Portland Press Herald	10-Feb	13-Feb	19-Oct	22-Oct
Bangor Daily News	23-Feb	27-Feb	18-Oct	22-Oct
Rumford Times	27-Feb		22-Oct	
Courier Gazette/Village Soup	28-Feb		23-Oct	
Camden Herald	28-Feb		23-Oct	
Kennebec Journal/Waterville Sentinel	24-Feb	25-Feb	23-Oct	25-Oct
Moosehead Messenger	26-Feb		24-Oct	
Ellsworth American	28-Feb		23-Oct	
Lewiston Sun Journal	24-Feb	25-Feb	19-Oct	20-Oct
Biddeford Journal	23-Feb	25-Feb	18-Oct	20-Oct

A copy of the approved advertisement is in Appendix C.

2. PSA Radio

See Appendix D for a list of radio stations contacted for the PSA. The Maine Media website was used as a reference (www.maineinfo/). Stations that accept PSAs received a copy of the PSA script and audio. Each station was called for the appropriate email address and contact and then sent the materials via email. The PSAS was sent to 34 contacts, but many of the contacts manage the PSAs on more than one station. For example, Clear Channel is located in Augusta and Bangor and has several radio stations but only one program director in charge of PSAs.

TRC's Maine-based public relations representative heard the PSA on several radio stations. This work was completed in February and March. It was made clear to the stations that the PSA was appropriate to use for the next year.

As indicated to the Department previously, PSA's are not paid placements and the stations contacted do not provide information on air time and/or time slots. A copy of the script is in Appendix E.

3. PSA – TV

All seven major television stations received the public service announcement in March 2008– Fox, NBC, CBS, ABC in the Bangor, Lewiston, Portland markets. Two TV stations did not return our representative repeated phone messages. However, the materials were sent to them with a self-explanatory cover letter. Maine Public Television does not air public service announcements and did not receive the materials. As indicated to the Department previously, PSA's are not paid placements and the stations contacted do not provide information on air time and/or time slots.

List of Television Stations Provided PSA

WABI-TV (CBS) CHANNEL 5	Bangor
WCSH-TV (NBC) CHANNEL 6	Portland
WGME-TV (CBS) CHANNEL 13	Portland
WLBZ-TV (NBC) CHANNEL 2	Bangor
WMTW-TV (ABC) CHANNEL 8	Portland
WMTW-TV (ABC) Channel 8	Auburn
WPFO TV - Fox 23	Portland
WWII-TV (ABC) CHANNEL 7	Bangor
WVFW Channel 22 Fox	Bangor

4. Please specify what additional education and outreach activities were conducted in this reporting year.

Press Releases

TRC issued press releases in February, April, and again in October promoting the program. The October release was picked up by the Portland Press Herald and a minor story ran. In all cases follow-up calls to statehouse reporters and the major outlets were conducted, but there was no interest in a feature story on the program. See Appendix G for copies of the releases.

Organizational Outreach

Personal contact and emails to distribute the TRC newsletter article (see Appendix F) were distributed to 96 local and statewide organizations. In addition to the 96, several of these organizations, like the Maine Council of Churches and the Maine Land Trust Network, have many affiliates to whom the article and graphic will be sent by the organization. Included were environmental groups like Natural Resources Council of Maine, Appalachian Mountain Club, Environment Health and Maine People's Alliance.

Outdoor organizations targeted were land trusts, lake associations and conservation groups. Chamber of commerce organizations were included, as were groups like Sierra Club and Appalachian Mountain Club.

The response TRC received was mixed – some groups we had anticipated would welcome the information, would not make a commitment to use the materials. Other groups were eager to help educate the public. Some organizations we could not reach via phone to confirm use of the article, despite several attempts.

5. Please specify what additional educational and outreach activities are planned for the next calendar year.

Please see TRC comments and recommendations below. TRC strongly recommends the Department reevaluate the program and considers a number of changes to the outreach efforts. TRC is prepared to implement the following in 2009.

- 1) Conduct a web advertising campaign in major Maine daily newspapers to promote the retail collections of thermostats. This would be in conjunction with the start of the fall heating season.

- 2) Develop program collateral previously agreed to in support of both wholesale and retail collections. TRC suggests retail collateral be coordinated with Vermont DEC. TRC is prepared to move forward with a peg-talker promoting both the \$5 incentive and proper disposal.

- 3) Develop coordinated strategy with the Department to illicit greater contractor participation by engaging other stakeholders. Either the amount of mercury available has been grossly over estimated, or the incentive has not altered behavior sufficiently to increase collections. Contractor participation is critical if collections are to increase.

6. Other comments or recommendations.

By statute the mercury-containing thermostat collection program collection goal for 2008 is 125 pounds of mercury. TRC efforts will contribute 38.5 pounds to the collective goal. It is notable in the first full year of both phases of the incentive program, collections by weight, have increased by only four percent.

It seems apparent there are two significant problems with the program. One, the statute grossly over estimates the amount of mercury available to capture through this program and two, many HVAC contractors still continue to violate Maine law and improperly dispose mercury-containing thermostats.

TRC has sustained over \$150,000 in expenses in Maine in the last two years. The incentive program is labor intensive and inefficient. TRC issued slightly over 700 incentive payments by

check in 2008. Thirty-one percent were for \$5.00 and an additional 19% were for \$10.00. TRC estimates it costs between \$10 and \$15 to issue each payment.

For a program that has not markedly increased collections, TRC questions the environmental benefits in comparison to the costs.

TRC recommends several changes to the program.

1. The Department should reassess the collection goals. TRC and NEMA, during recent Product Stewardship Institute stakeholder meetings, clearly demonstrated the methodology used to establish collection goals is flawed. The methodology uses erroneous assumptions to establish the mercury available to recover from both residential and commercial buildings in Maine.

2. The Department should consider other means for ensuring HVAC contractors comply with the law. It was assumed the incentive and outreach efforts would influence contractor behavior and increase compliance with Maine law.

TRC has no enforcement authority and beyond the financial incentive has limited means to change behavior of HVAC contractors. TRC suggests the Department explore options requiring Maine HVAC contractors to certify compliance with disposal regulations and use the process to engage in enforcement among other stakeholders.

3. TRC recommends the suspension of the mail-back program. Approximately seven percent of 2008 collections are attributed to the mail-back program. The mail-back program was created to provide access to the program for northern and eastern Maine. A limited number of thermostats were collected through this effort from communities in these areas. The mail-back program is inefficient and draws resources away from collection activities that will yield better results. The expansion of retail and HHW programs now provide convenient access to all Maine residents.

4. Despite TRC recommendation for an alternative approach, the Department mandated print advertising. TRC ran print advertisements in all major Maine daily papers and regional weekly papers. The February advertising buy resulted in less than 100 email and telephone requests for mailing labels (requests within the month of the buy) and the October advertising buy yielded less than 140 requests. TRC collected 422 mercury thermostats through the mail-back program in Maine, from approximately 180 individuals, while spending more than \$11,000 on the advertising placements alone. This is an unacceptably low rate of return relative to the expenditure.

TRC strongly suggests the Department approve TRC's initial recommendation for web-based advertising. TRC maintains that web-based advertising is the superior approach. This approach has been approved in New Hampshire, Vermont and Iowa. Web-based advertising extends the length of the buy and facilitates evaluation of the effectiveness of the advertising. A link to TRC's website will be included in the ad allowing a simple click-through for more

information on the TRC recycling program. TRC can track the number of click-throughs and the number of times the ad is viewed. TRC would run internet ads during September and October 2009, corresponding to the start of the heating season.

5. TRC recommends its education and outreach efforts focus on contractor participation. TRC is exploring options for collateral for wholesalers to use to promote the program. The cling sticker will be printed in the first quarter of 2008 for use at both retail and wholesale locations. TRC is also exploring developing a poster (initial feedback from some wholesalers is for 8 x 11 poster). Engaging with the Maine Fuel Oiler Dealers and other stakeholder groups in Maine is also recommended.

**Recycle your old mercury
thermostat and receive \$5 back**

**If you are purchasing a new thermostat,
you may be replacing one that contains
mercury.**

**For more information and proper disposal,
contact the Thermostat Recycling
Corporation:**

**Call 1-800-238-8192 or visit our
website at www.nema.org/TRC**

The TRC is issuing a payment of \$5.00 to anyone in Maine who returns a mercury thermostat to the TRC for recycling. Participants can request a mailing label by phone at 1-800-238-8192 or email at trc@nema.org.

Appendix E— PSA Script

(UP-TEMPO MUSIC, UNDER THROUGHOUT)

ANNCR: One of the smartest and simplest ways to save on energy costs and protect the environment is to replace your old thermostat with a new ENERGY STAR rated programmable model. Just remember that the thermostat you're replacing may contain mercury, and every Maine resident who properly recycles an old mercury thermostat is eligible to receive five dollars from the Thermostat Recycling Corporation, an industry funded non-profit. Get the details about recycling your mercury thermostats by calling the Maine Department of Environmental Protection's toll free 800 number or visiting their web site at MaineDEP.com.

The broadcast television PSA will feature a similar script, but also include graphics of mercury thermostats and the TRC and Maine DEP logos. And instead of referring viewers to the Maine DEP, it will feature the url for the web site and the TRC toll-free number.

Appendix F—Copy of "Canned" Newsletter Article

\$5 Rebate for Mercury Thermostats

Maine homeowners can now receive \$5 for each mercury-containing thermostat they return for recycling to the TRC – Thermostat Recycling Corporation. The rebate process is easy. Homeowners can order a TRC mailing packet at nema.org/TRC or by calling 1-800-238-8192. After the thermostat is received, the homeowner gets a \$5 check in the mail.

As part of a Maine law enacted in 2006, the rebate program offers homeowners another alternative for ensuring mercury is safely recycled. Many towns and cities in Maine have mercury collection programs where thermostats can also be recycled. The TRC program allows homeowners to recycle their old thermostats directly with the thermostat manufacturers

Thermostat Recycling Corporation

Contact: Leann Diehl 207-626-9099

Augusta, Maine – July 1, 2008 -- Maine homeowners can receive a \$5 payment by recycling their old mercury thermostat, which cannot legally be disposed in household trash. Under a program initiated under a new Maine law, thermostat manufacturers will provide pre-paid UPS mailing labels to any homeowner who requests them. The mailing labels allow consumers to ship thermostats to be recycled. In return, the manufacturer provides a payment of \$5 for each thermostat received. By simply recycling five thermostats, in other words, a homeowner can receive a check for \$25.

The program is operated by Thermostat Recycling Corporation (TRC), an industry-funded non-profit that recycles mercury thermostats throughout the continental United States.

Mark Kohorst, executive director of TRC, said, “It is now not only environmentally responsible, but profitable for Maine residents to avoid throwing old thermostats in the trash. Homeowners can obtain mailing labels from us either by phone or email and we encourage them to do so.”

Homeowners can request a mailing label by calling 1-800-238-8192 or sending an electronic request to trc@nema.org. No special packaging is required to ship the thermostat, although TRC recommends that it be placed inside a zip-lock bag and shipped in a well-sealed box. Homeowners should include the entire thermostat, with its cover intact, and under no circumstances try to loosen or remove the mercury bulbs contained inside. After entering a name and return address on the prepaid label, the homeowner may drop the package at any UPS outlet or call UPS to arrange pick-up.

The TRC recycling facility is located in Golden Valley, MN. Once the thermostat is received and processed, the TRC issues a check to the homeowner, which generally arrives within six weeks after the date of shipment. Payments are also provided to contractors who recycle thermostats through their local wholesale suppliers.

“We’re trying to get word of the program out all around the state,” said Kohorst. “Over time, we hope to work with some large retailers to make it easy for homeowners to drop off old thermostats when they shop, rather than rely on the mail.”

The TRC is funded by Honeywell, Emerson White-Rodgers, GE, and Nordyne, all of which sold mercury thermostats in Maine when it was legal to do so. Electronic, non-mercury thermostats have largely replaced the old mercury variety, which are banned from sale in Maine and approximately ten other states. More information can be obtained from the TRC web site, www.nema.org/trc.

Some Maine Retail Stores Now Thermostat Collection Sites

Maine -- The Thermostat Recycling Corporation (TRC) announced today an expansion to its Maine recycling program for mercury-containing thermostats.

Under the expansion, Maine homeowners will soon be able to drop off mercury-containing thermostats at participating Maine retail stores. The stores will accept the thermostats for recycling and provide customers with a \$5 coupon, gift card, or credit per thermostat to be used toward any purchase in the store.

Maine law requires the recycling of all mercury-containing thermostats. It is illegal to dispose of them in household trash. The TRC collection program offers several ways for homeowners to safely dispose of out-of-service thermostats.

“This new retail option provides Do-it-Yourselfer’s with a convenient way to responsibly manage mercury thermostats they take out of service,” says Mark Tibbetts, TRC executive director.

“It’s illegal in Maine for contractors to leave mercury thermostats with homeowners when the thermostats are taken out service. Contractors can already dispose of thermostats in Maine at wholesale supply businesses through the existing TRC program for contractors,” he adds.

“Over time, we hope to have many more large and small retailers participating,” Tibbetts says. The Maine Department of Environmental Protection is supplying the collection bins for the stores. The TRC assumes all other costs of the program including the cost to reimburse retailers for the \$5 coupon, gift card or credit.

“We expect more than 100 retailers to participate statewide,” Tibbetts adds. Today, the stores that have agreed to participate are Home Design Center, Bangor; Dover True Value, Dover-Foxcroft; Paradis True Value, Bar Harbor; Bond Brothers Lumber, Jefferson; Calais Ace Home Center, Calais; Blake Family

Hardware, Oakland; Sportsman True Value, Westbrook and Coastal Ace Hardware, Yarmouth, and Aubuchon hardware stores statewide.

“Customers should call the stores before taking their thermostats for collection to ensure the store has its collection bin and has started the in-store rebate program,” Tibbetts advises.

TRC also provides recycling containers to municipal hazardous waste collection programs and heating and cooling equipment wholesalers throughout Maine. Maine homeowners may also mail their waste mercury thermostats to the TRC. Pre-paid UPS mailing labels are available to any Maine homeowner who requests them by calling 1-800-888-0550 or sending an email request to trc@nema.org.

Homeowners who use the direct TRC mail-in program are eligible for a \$5.00 incentive for each mercury thermostat returned .

The TRC is a non-profit corporation founded by Honeywell, Emerson White-Rodgers, and General Electric. It recycles mercury thermostats throughout the United States. The TRC currently represents 17 of the nearly 30 manufacturers which distributed mercury thermostats in Maine when it was legal to do so.

VIA EMAIL

Gary Gulka
Vermont Department of Environmental Conservation
103 South Main Street
Waterbury, VT 05671

Subject: Thermostat Recycling Corporation's 2011 Annual Report

Dear Mr. Gulka:

Attached is TRC's annual collection report for calendar year 2011. TRC has made its best effort to provide a comprehensive report on its efforts to promote the collection program in Vermont and improve the program's environmental outcomes.

TRC continues to market its program in Vermont. We are working with HVAC wholesalers and others to increase the visibility of the program at their locations and will continue to push information about the program to HVAC contractors, technicians, homeowners, and others in the state.

TRC welcomes the opportunity to review this report with you and discuss our 2012 marketing efforts. I may be reached at 703-841-3246 or by email at mark.tibbetts@thermostat-recycle.org.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", written over a horizontal line.

Mark Tibbetts
Executive Director

bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material. The bin is returned to the location that sent it in with a new pre-paid address label within 72 hours of

TRC recovered 25.37 pounds of mercury from 3,572 intact mercury thermostats and 15 mercury switches from Vermont collection locations in 2011.

TRC recovered 1,670 thermostats from wholesale distributors, 1,268 from retailers, 94 from contractors, and 540 from household hazardous waste collection locations.

Similar to 2010, approximately 30% of all thermostats recovered did not request incentive payment. The rate was higher at locations using the "coupon," where only 55% of the thermostats returned requested payment.

TRC recovered 17 items with bar-coded stickers attached that were deemed ineligible for payment (e.g. non-mercury thermostat, other mercury containing device, non-mercury containing device, etc.). Of 1,038 coupons received in 2011, 63 were deemed ineligible (incomplete, damaged, illegible, or not eligible for payment).

Waste Mercury-Added Thermostat Management

Bins with waste mercury-switch thermostats are received at the fulfillment/processing center in Golden Valley, Minnesota. The facility is owned and operated by Honeywell International under contract with TRC.

Bins are received at the loading dock and sent to the TRC processing area. The bin and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed:

receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The containers are returned from the storage area to the TRC processing area to have the mercury switches removed from the plastic housing. Universal Waste Regulations require the disposal of waste within 12 months of generation. TRC's processor requires that the disposal occur within 6 months of generation and TRC follows the more stringent requirement. Small quantities of thermostats are removed from the container, which is then closed again, and placed at the switch removal workstation on a tray that contains any potential mercury spillage. The switches are removed from the thermostats and placed into a 2 quart container at the work station. In the event that a switch breaks and mercury spills the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. TRC processing area is equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

The 2 quart container is emptied into a special 55 gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are drawn away and vented when the drum is opened.

The 55 gallon drum is then shipped to Bethlehem Apparatus Corporation in Hellertown, Pennsylvania for final processing of the mercury ampoules (switches). Bethlehem Apparatus meets or exceeds all local, state, and federal regulations for the management of the product. Bethlehem's approvals for mercury recovery/recycling include:

- EPA - identification No. PAD002390961 (Bethlehem Apparatus Co., Inc.)
- DNR BDAT Requirement - satisfied by all recovery operations
- CERCLA (Comprehensive Environmental Response Compensation and Liability Act)
- Pennsylvania Department of Environmental Protection

The facilities' processing follows all EPA guidelines and regulations. TRC has a facility license from Hennepin County Minnesota for the operation of the TRC. Honeywell, Inc. has a Hazardous Waste Generator license from Hennepin County. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

Program Education and Outreach

TRC marketing and promotion efforts targeted key audiences in Vermont. Our objectives are to raise awareness of key components of Vermont's mercury thermostat law and to encourage the recycling of waste mercury thermostats. Below is a summary of activities and channels we utilized in support of this effort.

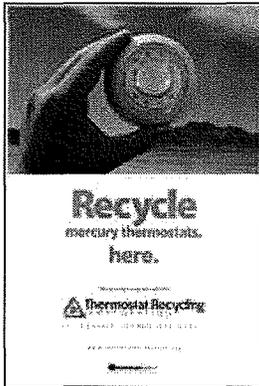

Development of Written Materials and Signage for Collection Points and Key stakeholders—TRC developed and posted on its website (www.thermostat-recycle.org) a Promotional Toolkit which contains templates of a number of items for collection points to

download and reproduce. In 2011 TRC added three new items to the toolkit. The items include two posters and two versions of a point-of-sale card (See exhibits 1 and 2).

In addition to the templates on TRC's website, TRC placed the new window cling (ideal for the entrances of collection locations) into inventory along with the two 11 x 17 posters and a postcard. TRC provided the cling and a copy of the "law" poster (or previous versions) to all new locations. TRC actively promotes the availability of these items and provides copies upon request to any participating collection location, HVAC contractor or local government agency. These items are also distributed at trade shows.

Window Cling

Wholesaler Recruitment/Engagement—Under Vermont law, manufacturers are required to avail collection containers to HVAC wholesale distributors, thermostat retailers, and local governments upon request.

TRC continued to promote the program to HVAC wholesale distributors. In partnership with the Heating Airconditioning, Refrigeration Distributors International (HARDI) TRC launched the inaugural Mercury Thermostat Recycling Awards in May 2011. The awards were intended to incent participation in the program by recognizing the distributor(s) that recovered the most mercury thermostats and/or developed innovative strategies to promote the program at its location(s). The program was widely promoted by HARDI to its members and within the industry trade press. TRC also developed custom promotional materials for HARDI members and templates of those materials are available on TRC's website. The awards were presented at HARDI's annual meeting in **October**.

Retailer Engagement— TRC continued to encourage large national retailers to participate in the program.

Summary of Additional Education and Outreach by Channel

TRC conducted a broad array of activities intended to raise awareness of Vermont's mercury thermostat disposal ban, mandatory HVAC contractor recycling, and the ease of compliance through TRC's collection program.

Website—TRC maintains www.thermostat-recycle.org. The website contains participation forms, the previously mentioned outreach toolkit, safety and shipping information, media releases, and reports. The website includes a location search utility that provides for an easy search by zip-code of locations that have ordered TRC collection containers. TRC also promotes its national collection partners by scrolling their corporate logos on the homepage. Vermont distributor R.E. Michel provided its logo for use by TRC

In **September** TRC completed a *search engine optimization* (SEO) of its website. The objective of the SEO was to increase website traffic by making TRC easier to find on the internet. For instance if a person searches on the term "mercury thermostat recycling" or "thermostat recycling" the first search result in Google is TRC's website.

Earned Media— TRC generated considerable positive media attention in 2011 (See Exhibit 3). TRC made a concerted effort in 2011 to generate stories on the program. Most notable was the four- page article in *The Air Conditioning, Heating, and Refrigeration News (The News)* which included a TRC provided table on mercury thermostat laws. *The News* is one of the leading industry publications.

The National Demolition Association (NDA) also ran a multi-page article authored by TRC's executive director on the proper management of mercury containing products found in residential and commercial structures in the **June/July** issue of *Demolition Magazine*. Reprints of several of these articles may be found on TRC's website at <http://www.thermostat-recycle.org/media/index>.

ACCA Sponsorship—TRC sponsored the Air Conditioning Contractors of America (ACCA) 2011 Contracting Week in Nashville, Tennessee, October 18-21. The sponsorship included TRC's logo on attendee bags, the inclusion of TRC promotional materials in the bag and TRC's logo on ACCA's website and signage at the event.

Vermont Fuel Oil Dealers Association—TRC sponsored the Vermont Fuel Oil Dealers Association annual meeting in **May**. Sponsorship included the inclusion of TRC’s logo in event marketing materials, website and a ½ page ad in the conference brochure.

Web-based advertising— TRC developed new rotating banner advertisements for 2011 and ran them (Exhibit 4) on the websites contractingbusiness.com (160x600 skyscraper) and hvac-talk.com (300x250 medium rectangle) during the months of **April, May, September and October**. Together, the websites average 1.8 million pages views and 280,000 unique visitors per month. HVAC-Talk.com, an online discussion community, boasts 122,000 registered users.

TRC strategically placed ads to coincide with the spring and fall HVAC business cycles. While the ads were featured, 701,528 impressions were delivered and 522 clicks on the advertisements were recorded.

Exhibit 4: Web Banner Advertisement (300 x 250 version)

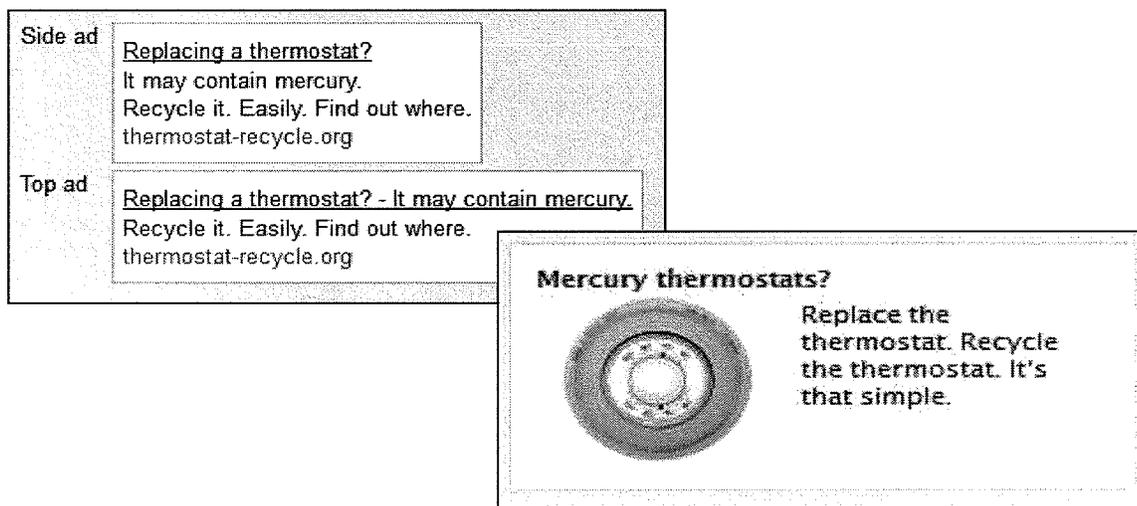

Social Media— TRC developed and deployed a Social Media strategy that leveraged the power of Google and the popularity of Facebook. This campaign, which ran from **mid-September** through early **December**, geo-targeted contractors and consumers in states with mercury thermostat disposal bans, including Vermont, in an effort to create awareness and increase thermostat collections.

Ads and landing pages (See Exhibit 5) were developed with variable messages targeting both audiences. Advertisements appeared on Google search results pages after an individual searched terms related to TRC’s mission (E.g. thermostat replacement, contracting recycling regulations, mercury thermostat recycling, programmable thermostats, etc.). Similarly, the Facebook campaign targeted users over 18 who "like" industry-relevant topics or organizations (i.e. renovating, renovators, HVAC, HVAC Technicians, home repair, etc.)

The campaign was very successful. The campaign resulted in over 340,000 impressions on Google and 8.1 million on Facebook.

Tip-In Insert in HVAC Trade Press—TRC placed a 5x7 full color insert in the **April** and **October** issues of *HVACR Business* (see Exhibit 6). The insert was included in issues received by approximately 12,000 subscribers in states with mercury thermostat disposal bans (including Vermont). This enabled TRC to incorporate the message, “It’s something you gotta do, because it’s the law.” Additionally, TRC incorporated the logos of larger HVAC wholesale distributors on the backside of the card enabling contractors to quickly identify collection locations.

Exhibit 5: Examples of Google and Facebook Advertisements

Tradeshows—TRC attended and exhibited at the following trade shows relevant to Vermont:

January 31-February 2: AHRExpo. Las Vegas. AHR Expo is the largest national trade show for the HVACR industry. TRC staff exhibited and promoted the program to HVAC contractors, manufacturers and distributors. The show had a total registered attendance of over 53,000.

February 15–17: Air Conditioning Contractors of America Indoor Air Expo, San Antonio, Texas. Representatives from over 200 HVAC contracting businesses attended the show.

May 22-26: Oil and Energy Service Professionals. Hershey, PA. This was OESP’s annual convention and trade show. Nearly 2,700 HVAC professionals attended this show, which targeted service managers for HVAC firms that install and repair oil fired furnaces. TRC sponsored this event and its logo was displayed on event signage and website.

September 27-29: North American Hazardous Materials Management Association (NAHMMA), Portland, Oregon. This was NAHMMA’s annual meeting. TRC exhibited and co-presented with a HARDI representative.

October 23-26: Heating Airconditioning and Refrigeration Distributors International (HARDI). Maui, Hawaii. TRC exhibited and participated in the “Booth Program,” which provides for 1-on-1 sessions with senior executive staff from HARDI member companies. This event targeted representatives of approximately 80% of the wholesale market for HVACR products. TRC also presented the inaugural Thermostat Recycling Award to three HVACR distributors recognizing their support of the program.

Direct Mail— TRC implemented a direct-mail campaign in Vermont in 2011. TRC mailed a postcard (see Exhibit 7) to approximately 300 Vermont based HVAC contractors in **March, October, and December**. TRC sourced the list of HVAC contractors from a commercial list supplier.

Exhibit 6: Tip-in Insert *HVACR Business*

Fact 1:
Recycling mercury thermostats is easy.

Fact 2:
Recycling is good for business. (Mercury recycling is a profitable business.)

Fact 3:
It's something you gotta do, because it's the law.

And we're the ones who make it easy.

We know you have a lot to do, and we want to help you make it a breeze. That's why we've made it so easy to recycle your mercury thermostats. Just call us at 1-800-368-7263 or visit our website at www.thermostatrecycling.com. We'll take care of everything for you. Just call or visit our website today. It's the easy way to recycle your mercury thermostats. That's all you have to do.

Your participation is appreciated. Thank you for your support.

Stakeholder Outreach— TRC sent correspondence (See Appendix A) to the Vermont Fuel Oil Dealers Association in **December** encouraging it to use TRC provided copy in their member newsletters or in other communications.

Exhibit 7: Front & Back of Postcard

Operational Enhancements

TRC made a number of enhancements to its operations in 2011. Some changes include:

- To facilitate compliance with the one-year accumulation regulation and speed up returns, TRC began including an adhesive label to record the accumulation start date in each container. TRC also modified the label on the exterior of the bin to include admonition to return bin within one year of receipt. TRC also updated instructions provided with every new and returned recycling container to explicitly require locations to record the accumulation start date and return the container within one year of that date.
- To improve customer service TRC began to directly handle customer service calls at program's HQ and put the new toll-free number and email address on instructions provided in each bin. The website and the new number and email helpline were added to the footer and contact page on TRC's website.
- Modified participation forms for program to capture more information from the collection location at the time the bin is ordered. TRC also began explicitly offering to

invoice bin fees (this was a particular issue for local governments needing a PO). TRC began accepting bin orders via fax.

- Implemented a new data management system that provides for timely updates to collection location information on the website. With the new database, the program migrated data entry for new orders to HQ to improve the accuracy of data entry.
- Engaged directly with several large wholesale distributors with locations in Vermont to update location information in the program's location database. That effort is on-going and continual.
- Updated its compliance assistance effort. As collections have increased, the frequency of bins with non-compliant materials has grown. A new monitoring system has been implemented increasing the frequency of contact to collection locations. This effort has the secondary benefit of pushing collateral to locations and updating location information.

Program Expenses

TRC is a national voluntary program that is also operating nine mandatory programs on behalf of its manufacturer members. As most promotional activities are run concurrently in multiple states tracking and isolating expenses specifically to Vermont is not possible. Below is a summary of TRC's national program expenses for 2011. A copy of TRC's 2010 IRS Form 990 is also available for inspection.

Exhibit 8: 2011 Program Administrative Expenses

TRC Staff and Administration	\$ 255,617
Recycling Costs	\$ 299,877
Insurance	\$ 13,945
Statutory Incentive Payments	\$ 37,860
New Collection Containers	\$ 18,859
Travel	\$ 28,108
Legal	\$ 93,272
Direct Expenses for Marketing & Outreach	\$ 123,221
Total	\$ 870,760

TRC expenses include:

- **TRC Staff and Administration:** Includes staff and consultants, general office expenses, telecommunications, and other administrative expenses. Includes staff labor costs to implement Vermont program.
- **Insurance:** Pollution and liability insurance.

- TRC made \$37,860 in direct incentive payments on behalf of manufacturers as required by Maine and Vermont law. This does not reflect the administrative costs associated with the incentive program.
- Travel: All travel in 2011 includes travel to trade shows to promote program.
- Recycling Costs: All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and data management.
- New Collection Containers: Direct cost for new containers ordered in 2011.
- Marketing/Outreach & Printing: Includes direct costs to develop and print program collateral; direct mail, national and state advertising, sponsorships, marketing consultants, some web and IT consulting, and other outreach activities. Marketing/Outreach does not include any TRC labor costs.

Evaluation and Program Modifications

Vermont's thermostat law went into effect in January 2009. In comparison to the year prior to the law's passage, collections have increased by 161%. This is similar to the results of other states with mandatory programs. However, collections were up only 7% in 2011, whereas other programs continued to increase (with similar marketing and promotional efforts). It is unclear at this point whether additional growth is possible or the program has matured (Maine's growth flattened appreciably within the third year of the program).

In 2012 TRC's main priorities in Vermont are:

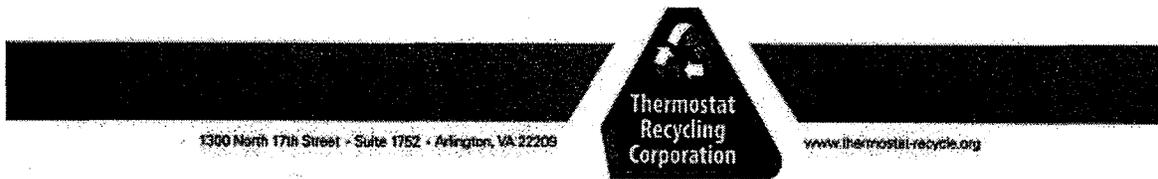

- Building distributor support for the program. The program must be visible and actively promoted at HVAC wholesale distribution locations. TRC wants to see more bins returned from more locations in 2012.
- Engaging utilities and energy efficiency programs. TRC needs to capture more of the thermostats being removed through these kinds of programs.
- Educating contractors on the need to make recycling mercury thermostats a priority for their technicians. The message is every mercury thermostat, every time, by all a contractor's technicians.

Some changes to the scope and expansion of activities include:

- Expanding direct mail to HVAC contractors from three to four mailings in 2012.
- Developing a postcard to send to collection locations reminding them to ship TRC a bin. TRC tested this approach with letters to locations in several states in 2011 and will expand this effort in 2012. The objective is increase the frequency of returns, remind locations of the program (high staff turnover at locations affects continuity of operations), and improve the accuracy of TRC's location database.
- Add additional collateral to TRC's toolkit including an adhesive cling for contractors' vehicles to acknowledge their participation in the program.
- TRC plans on restarting its Google ad words campaign but not Facebook. Also, TRC will make a number of buys in the trade press. Depending on results in other markets, TRC may also test a consumer-facing ad campaign in Vermont during the fall.

- Targeting specific HVAC distributors on collaborative marketing efforts. This effort not only improves collections through specific distributors but creates competitive pressure within the industry inciting participation.
- Has arranged for a summer intern in 2012 that will, among other projects, work on addressing legacy data issues in the program's location database.

Appendix A: Fuel Oil Dealers Letter

December 1, 2011

Matt Cota
Vermont Fuel Dealers Assn.
250 Main Street
Montpelier, VT 05602

Dear Matt Cota:

This letter is to inform you of a legal requirement that may affect your members. Legislation that bans the disposal of mercury thermostat in the trash was amended and now provides easy and free recycling of waste mercury thermostats. It also requires HVAC contractors to recycle all thermostats they remove from service. Contractors may not leave them at the customer's premise.

The good news is that this mandate is very easy to comply with. Manufacturers must provide a no-cost recycling program to contractors and all HVAC wholesale distributors in Vermont must act as a collection point. The Thermostat Recycling Corporation (TRC) is an industry funded not-for-profit organization that is implementing manufacturers' program in Vermont and other states.

We are interested in working with your organization to increase awareness about the legal obligations of the HVAC industry and TRC's program. We attached information we hope you will share with your members. We plan to follow-up with you to discuss ideas on further promoting the program and ways to help protect Vermont's environment.

For more information, please call 703-841-3243 or email Neisha.johnson@nema.org. Additional information is also available at TRC's website at www.thermostat-recycle.org.

Regards,

Mark Tibbetts
Executive Director

Go Green, Get Green!

Many old thermostats contain between 3-12 grams of mercury and they shouldn't be thrown in the trash. In fact, in several states, including Vermont, it is now the law.

Fortunately, the Thermostat Recycling Corporation (TRC), an industry funded non-profit, makes it easy to comply. As part of manufacturer's obligation under the law, they provide a recycling program to all HVAC wholesalers in Vermont. Contractors have to do no more than hang on to waste thermostats that they remove from service and bring them to their local HVAC wholesaler. There is no cost to the contractor, as all ongoing costs to ship and process the mercury-containing thermostats are covered by the manufacturers.

As an added bonus, for every thermostat recycled, contractors are eligible to receive \$5.

For more information on the program and participating locations, visit www.thermostat-recycle.org.

APPENDIX G: Vermont locations have requested or been provided recycling containers.

April 1, 2011

Gary Gulka
Vermont Department of Environmental Conservation
103 South Main Street
Waterbury, VT 05671

Subject: Thermostat Recycling Corporation's 2010 Annual Report

Dear Mr. Gulka:

Attached is TRC's annual collection report for calendar year 2010. TRC has made its best effort to be responsive to the Department's request for expense and collection data.

TRC would like to take the opportunity to summarize a few of its major accomplishments in 2010.

- Notwithstanding continued economic challenges for the HVAC industry, the national recovery of thermostats increased by 29 percent, keeping almost 1,900 pounds of mercury out of landfills and municipal solid waste incinerators.
- Industry participation in TRC continued to grow and by year end, TRC represented 29 manufacturers that historically branded and distributed mercury switch thermostats.
- TRC continues to see substantial growth in access to the program, adding over 700 new collection locations in 2010. TRC saw solid growth in all collection location types in 2010.

TRC implemented year two of its effort to build and sustain collections of waste mercury thermostats in Vermont. TRC collected 3,349 whole thermostats from Vermont locations in 2010. TRC was pleased with the results in light of its targeted outreach efforts in 2010.

TRC looks forward to continuing the collaborative working relationship with the Department. The Department's engagement on this issue contributed to the program's success last year and demonstrates the value and need for state support of mercury thermostat collection programs.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", written over a horizontal line.

Mark Tibbetts
Executive Director

Total	3232	3953	24.51

TRC recovered 24.5pounds of mercury from 3,349 intact mercury thermostats and mercury switches from Vermont collection locations in 2010.

TRC recovered 1575 thermostats from wholesale distributors, 933 from retailers, and 841 from household hazardous waste collection locations.

Over 30% of all thermostats recovered did not request incentive payment. The rate was higher at locations using the "coupon," where only 55% of the thermostats returned requested payment.

TRC recovered 6 items with bar-coded stickers attached that were deemed ineligible for payment (e.g. non-mercury thermostat, other mercury containing device, non-mercury containing device, etc.). Of 1169 coupons received in 2010, 68 were deemed ineligible (incomplete, damaged, illegible, or not eligible for payment).

Waste Mercury-Added Thermostat Management

Bins with waste mercury-switch thermostats are received at the fulfillment/processing center in Golden Valley, Minnesota. The facility is owned and operated by Honeywell International under contract with TRC.

Bins are received at the loading dock and sent to the TRC processing area. The bin and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name, city, state, zip code, date returned, number of thermostats and bulbs by manufacturer and any non-conforming material.

The bin is returned to the business that sent it in with a new prepaid address label within 72 hours of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The containers are returned from the storage area to the TRC processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the disposal of waste within 12 months of generation. TRC's processor requires that the disposal occur within 6 months of generation and TRC follows the more stringent requirement. Small quantities of thermostats are removed from the container, which is then closed again, and placed at the bulb removal workstation on a tray that contains any potential mercury spillage. The bulbs are removed from the thermostats and placed into a 2 quart container at the work station. In the event that a bulb breaks and mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean up and disposal of mercury. TRC processing area is equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

The 2 quart container is emptied into a special 55 gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are drawn away and vented when the drum is opened.

The 55 gallon drum is then shipped to Bethlehem Apparatus Corporation in Hellertown, Pennsylvania for final processing of the mercury ampoules (switches). Bethlehem Apparatus meets or exceeds all local, state, federal and EPA regulations for the management of the product. Bethlehem's approvals for mercury recovery/recycling include:

- EPA - identification No. PAD002390961 (Bethlehem Apparatus Co., Inc.)
- EPA BDAT Requirement - satisfied by all recovery operations
- CERCLA (Comprehensive Environmental Response Compensation and Liability Act)
- Pennsylvania Department of Environmental Protection

The facilities' processing follows all EPA guidelines and regulations. TRC has a facility license from Hennepin County Minnesota for the operation of the TRC. Honeywell, Inc. has a Hazardous Waste Generator license from Hennepin County. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

Program Education and Outreach

TRC marketing and promotion efforts targeted key audiences in Vermont. Our objective was to raise awareness of key components of Vermont's mercury thermostat law and to affect recycling behavior of the generators of waste mercury thermostats. Below is a summary of activities and channels we utilized in support of this effort.

Wholesaler Recruitment/Engagement—TRC continued with efforts to engage wholesale distributors to ensure that they are aware of the 1) mandate to collect waste mercury thermostats

in Vermont, and 2) the availability of the TRC program as a simple, low-cost means of compliance.

TRC continued working with the Heating Airconditioning Refrigeration Distributors International (HARDI) trade association. HARDI members represent approximately 80% of the domestic wholesale market for HVACR equipment. Most significantly, in October TRC and HARDI entered into a formal agreement to promote the TRC program to HARDI's members.

TRC also sent correspondence (see Appendix A for a copy of correspondence) to the executives of all 450 HARDI member companies inviting them to meet with TRC staff the HARDI annual meeting.

TRC attempted to engage with the American Supply Association both in writing and by phone (see Appendix B for a copy of correspondence) as well.

Retailer Engagement—TRC engaged with representatives of large retailers in 2010 to ensure they were aware TRC was open to their participation in the program.

Demolition Contractor Engagement—TRC engaged with the National Demolition Association, informing them about the program (See Appendix C for copy of correspondence) and the legal obligation to recycle waste thermostats in certain states.

State Energy Office Outreach—TRC sent letters to state energy office officials in most US states, including Vermont informing them on the need to recycle waste mercury thermostats and the availability of the program (see Appendix D for copy of correspondence).

Summary of Outreach by Channel

Regional and National Trade Shows—TRC attended and exhibited at the following trade shows relevant to Vermont:

January 25-27: AHR Expo, Orlando, Florida. AHR Expo is the largest national trade show for HVACR industry. TRC staff exhibited and promoted program to HVAC contractors, HVAC manufacturers, and HVAC distributors. The show had a total registered attendance of 44,000.

May 24-25: National Oil Heat Service Managers annual meeting and trade show, Providence, Rhode Island. TRC also sponsored the opening reception for additional visibility at the event.

June 23-24: National Town Meeting for Demand Response, Washington, DC. This was a two day event focusing on demand response and included both utilities and thermostat contractors. TRC exhibited at the event.

July 27-29: North American Hazardous Materials Management Association (NAHMMA) Annual Meeting, St. Pete Beach, Florida. TRC exhibited and also presented on the program.

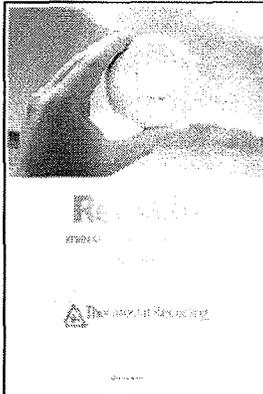

September 23-24: Comfortech, Baltimore, Maryland. Comfortech is a national trade show for HVAC contractors sponsored by Penton Media, publishers of Contracting Business.

October 23-26: HARDI annual meeting, Houston, Texas. TRC exhibited at the event, which targets representatives of approximately 80% of the wholesale market for HVACR products.

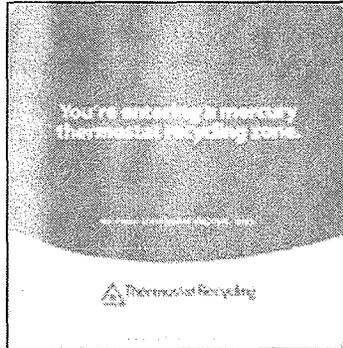

Program website—In October 2010 TRC launched a new website. The site updated and reorganized content; making pertinent information on the program to various audiences more accessible. The new website may be viewed at www.thermostat-recycle.org.

Promotional Took-kit—Concurrent with the launch of the new website, TRC added high-resolution templates of a number of promotional items. These items are free to use by TRC collection points. Developed for HVAC wholesale distributors, these items are available at no cost to TRC collection points to assist them in promoting the program to their customers. Items include a poster, bill stuffer, invoice template, cling sticker, banner, postcard, and print advertisement. Once the inventory of the current poster and window cling is used, TRC will replace those items with materials from the toolkit.

Window Cling

Advertisement

Earned Media

TRC again contacted Vermont Fuel Oil Dealers Association in October and provided them content for their newsletter.

TRC also received coverage in national trade press on numerous occasions. For instance the program was covered in *Indoor Comfort News* (June 2010, July 2010, and October 2010). The HARDI/TRC media release (December, 2010) was covered in *Waste and Recycling News* and *Air Conditioning Today*. TRC's program also received extensive coverage in the HARDI Convention Daily (distributed to all HARDI annual convention attendees) and *HVACR Distributor* (see appendix E for examples of media coverage).

Paid Advertising

TRC ran rotating banner advertisements (Exhibit 1) on the websites contractingbusiness.com and Hvac-talk.com during the months of April, May and June. The advertisement was animated with scrolling images of thermostats, the final message directed contractors to TRC’s website.

Both sites are national and target the HVAC contracting audience. Contractingbusiness.com averages 59,000 page views and 27,000 unique visitors per month. Hvac-talk.com averages 1.5 million page views and 221,000 unique visitors per month.

Exhibit 1: Web Banner Advertisement

TRC placed animated banner advertisements on the websites of the major Vermont newspapers at the start of fall heating season (see table 1). Web-based advertisements began in late September and ran for approximately 30 days (see exhibit 2 below). TRC purchased a minimum of 250,000 impressions on both websites.

Table 1: Web Advertisements

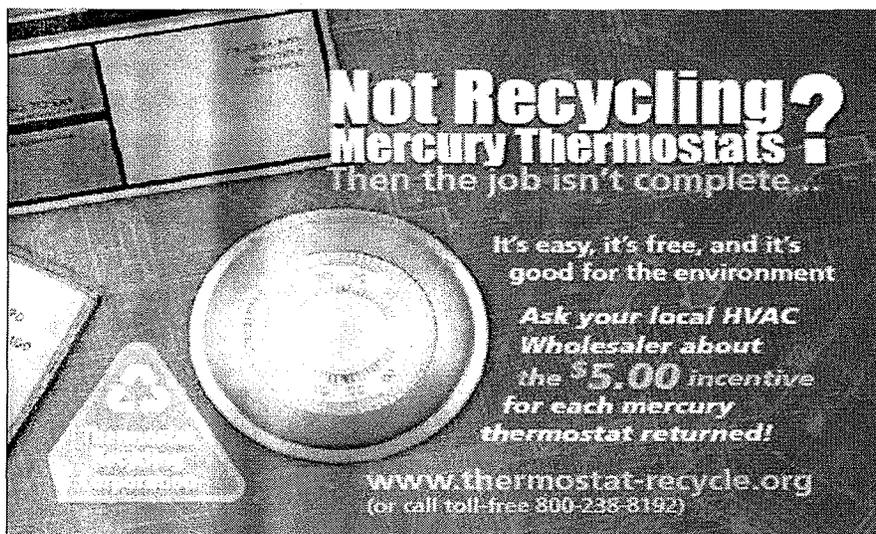

Website	Type of Advertisement	Size	Number of impressions
Burlington Free Press	Skyscraper	160x600 Pixels	250,000 over one month
Times Argus	Skyscraper	160x600 Pixels	250,000 over one month
Rutland Herald	Skyscraper	160x600 Pixels	
Vermont Today	Skyscraper	160x600 Pixels	
New England Business Journals	Skyscraper	160x600 Pixels	

Exhibit 2: Consumer Web Advertisement

Direct Mail— TRC developed and mailed a postcard (Exhibit 3) to approximately 500 HVAC contractors in Vermont. The mailing list was sourced from D&B Zap data. TRC conducted the mailing in the spring and repeated it in the fall of 2010.

Exhibit 3: Front of Postcard

Program Expenses

TRC program expenses for 2010 reflect changes in marketing strategy and certain one-time expenses that occurred in 2009. For instance, in 2009 TRC expended over \$60,000 on the California study (reflected in “administration”) on mercury thermostat disposal and over \$20,000 in printing expense (reflected in “marketing”) for incentive coupons as mandated by Maine and Vermont law.

Exhibit 3: 2010 Program Expenses

TRC Staff and Administration	\$231,757
Recycling Costs	\$300,096
Insurance	\$17,771
Statutory Incentive Payments	\$40,380
New Collection Containers	\$18,219
Travel	\$28,809
Direct Expenses for Marketing & Outreach	<u>\$76,696</u>
Total	\$713,728

TRC also shifted from certain paid advertising that was deemed ineffective and instead emphasized industry events and trade shows. As such, travel increased significantly in 2010 as TRC staff (including a new full-time outreach staff person hired in November 2009) regularly attended both national and regional industry trade shows.

In 2010 TRC also began the development of new custom database and, while budgeted for 2010, less than 30% of the project expense was booked during the fiscal year and will be carried over to the 2011.

TRC expenses include:

- TRC Staff and Administration: Includes staff and consultants, general office expenses, telecommunications, legal, and other administrative expenses. Includes labor costs to implement Vermont program.
- Insurance: Pollution and liability insurance.
- TRC made \$8,770 in direct incentive payments as mandated by Vermont law. This does not reflect the costs associated with administering the incentive program.
- Travel: All travel in 2010 includes travel to trade shows to promote program.
- Recycling Costs: All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and data management.
- New Collection Containers: Direct cost for new containers ordered in 2010.
- Marketing/Outreach & Printing: Includes direct costs to develop and print program collateral; direct mail, website development, national and state advertising, sponsorships and other outreach activities. Marketing/Outreach does not include any TRC labor costs. TRC expended \$4,175 on consumer advertising in Vermont in 2010.

Recommendations/Next Steps

Vermont's thermostat law went into effect in April 2009 and collections have increased on par with those of other states that have passed mandatory collection programs for waste mercury thermostats. Overall in the five states (CA, IA, ME, NH, and VT) collections have increased by 47% (two year average increase), whereas Vermont's have increased by 38%.

The impact of the incentive on collections remains ambiguous at best. Over 30% of the thermostats returned came with no request for payment last year. TRC remains concerned that resources that could be put to better use are being diverted to the incentive program that is only marginally increasing collection rates as compared to programs in other states.

Additionally, challenges remain. Of the 193 locations that have been provided containers by Vermont DC, only 68 returned one or more containers in 2010 and we remain concerned about the level of participation by both collection points and contractors in the state.

TRC's challenge is that the collection locations are independent businesses that it has no control over. TRC has no enforcement authority and can not compel any collection location to take any action including ordering a container, shipping a container when full, or promoting the program. As such, TRC recommends the Department continue the practice of periodic visits to collection points throughout the state.

Moreover, TRC believes efforts need to be made to better engage wholesale collection points and larger HVAC contractors in the state. To support this effort, TRC among other things will:

- Attend and exhibit at several national and regional industry trade shows.
- Expand its advertising buy in www.contractingbusiness.com and www.hvac-talk.com to 4 months (spring and fall). TRC is also developing new creative for this campaign. TRC will repeat the advertising buy in *Indoor Comfort News* but with updated advertising copy
- Place a postcard insert in HVACR Business (April and September issues) that will go to 12,000 subscribers in states, including Vermont, with mercury thermostat disposal bans and/or mandates for recycling.
- Update its website to recognize and promote HVAC distributor participation.
- Continue with its direct mail campaign.
- Directly recruit HVAC distributor participation in the program and encourage distributors to actively promote the program to their customers.
- With HARDI, develop an award program that recognizes the HVAC distributors' contribution to the success of the program.
- Continue efforts to engage with other industry stakeholders and build support for the program.

Appendix A: Correspondence to HARDI Members

October 7, 2010

Dear Jess Hill:

If you have operations in California, Iowa, Illinois, Maine, Montana, New Hampshire, Pennsylvania, Rhode Island, or Vermont, please plan on visiting with Thermostat Recycling Corporation (TRC) staff at HARDI's Conference Booth Program on Monday, October 25, during HARDI's annual meeting in Houston, Texas. TRC staff will be at booth 429 and attending the full conference.

As you may be aware, these states have passed mercury thermostat legislation. Among other things, the legislation requires all HVAC wholesale distributors with facilities in these jurisdictions to act as a collection point for waste mercury-containing thermostats. While many wholesale distributors have taken advantage of TRC's program and ordered collection containers, many have not begun to actively collect mercury thermostats at all locations in these states.

Failing to act as a collection point could result in penalties that range from sales bans on residential controls to civil penalties up to \$25,000 a day per facility.

TRC staff will be prepared to brief you on your specific legal requirements in each state, which of your facilities are signed up for the program, and the volume of thermostats collected at your locations. TRC staff will also explain how manufacturers, through TRC's take-back program, make compliance easy and nearly cost-free.

If you don't have legal obligations in the states where you have operations, participating in TRC's program is still a great way to promote your business as a "green business" and provide a valuable service to your customers with little direct cost to you. Please visit our booth and we can provide you with all the information you need to participate in and promote the TRC program.

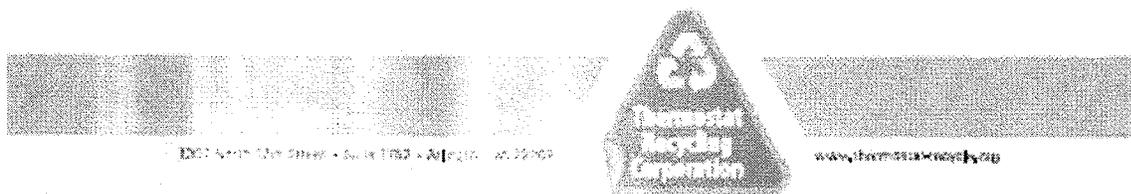

For more information on TRC, please visit our website at www.thermostat-recycle.org. If you would like to speak with TRC staff in advance of HARDI's meeting, please do not hesitate to contact the undersigned at 703-841-3246 or at mark.tibbetts@nema.org.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts".

Mark Tibbetts
Executive Director

Appendix B: Correspondence to American Supply Association

September 13, 2010

Mr. Michael Adelinni
Executive Vice President
American Supply Association
222 Merchandise Mart, Suite 1400
Chicago, IL 60654

Subject: Legal Mandate in Nine States for HVAC Wholesale Distributors to Collect Waste Mercury Thermostats

Dear Mr. Adelinni:

Thermostat Recycling Corporation (TRC) requests your assistance in informing your members about their legal obligations in several states to collect waste mercury thermostats.

As you may be aware, many older thermostats contain between three and twelve grams of mercury. While safe when in use, these thermostats may pose a risk to human health and the environment when discarded in solid waste.

In an attempt to increase the number of thermostats diverted from solid waste, several states have passed laws relating to the collection and disposal of waste mercury thermostats. Currently seven states (California, Iowa, Maine, Montana, New Hampshire, Pennsylvania, and Vermont) require wholesale distributors of HVAC equipment to act as a collection point for waste mercury-containing thermostats. Two additional states (Illinois and Rhode Island) begin mandating collection in 2011.

Fortunately, for wholesale distributors who currently are not collecting mercury thermostats, a simple and low-cost collection/recycling program that satisfies most state legal obligations exists. Manufacturers of mercury-containing thermostats started the non-profit Thermostat Recycling Corporation in 1997 to facilitate the collection of all brands of mercury-containing thermostats.

For a modest one-time fee (currently \$25 per collection container), TRC provides a sturdy plastic collection container, pre-paid shipping label, and educational materials to collection points. TRC assumes all on-going costs for shipping and processing of the thermostats. All that TRC requires is that collection locations only ship whole mercury-containing thermostats (no other mercury-containing products) with their covers, return the container at least once a year, and assistance in promoting the program.

Appendix C: Correspondence to American Demolition Association

May 4, 2010

John Lloyd
Vice President
Lloyd's Construction Services, Inc.
7007 West 128th Street
Savage, MN 55375

Dear Mr. Lloyd:

This letter is to serve as a follow-up to our email conversations regarding outreach efforts between the National Demolition Association (NDA) and the Thermostat Recycling Corporation (TRC).

We would like to thank you again for your efforts in presenting information about TRC to the Board of Directors as well as the Environmental Committee at the NDA 2010 Convention. We also appreciate NDA's website including a link and information on TRC's program. Once our website updates are complete, we plan on incorporating a link directing to NDA's website as well.

We look forward to continued collaboration on this issue. We welcome and appreciate the support and assistance.

Please feel free to contact me at mark_tribbens@nema.org or (703) 841-3243 if you need further assistance.

Thank you for your time.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tribbens", is written over a faint, larger version of the company logo.

Mark Tribbens
Executive Director

Appendix D: Sample Correspondence with State Energy Office Officials

Contact
State Department
Address
City State Zip

Date

Dear _____:

This letter is intended to bring your attention to the issue of the proper disposal of end-of-use mercury-containing thermostats. As you may be aware, many older thermostats contain on average 3 grams of mercury and it is important that at the end-of-use these thermostats are properly disposed of to prevent release of mercury into the environment.

In fact, many states regulate the disposal of mercury-containing products and several go further requiring contractors to assume responsibility for the proper disposal of mercury-containing thermostats.

Fortunately, the proper end-of-life management of mercury thermostats is easy. Voluntarily founded by manufacturers, the Thermostat Recycling Corporation provides an easy and affordable way for contractors to properly dispose of mercury-containing thermostats. TRC has collection locations in 47 states that accept end-of-use thermostats at no charge. TRC absorbs all costs related to shipping, handling, and processing of the waste thermostats. To date, TRC has collected and recycled over 4 tons of mercury and nearly 1 million thermostats.

It is our understanding that many state energy programs are promoting the use of electronic programmable thermostats. We strongly encourage you to incorporate thermostat recycling into your programs. Additionally, adding a link to TRC's website from your own may encourage participation in the program.

To learn more about TRC and how it can support thermostat recycling in your state, please refer to the attached fact sheet that we've included with this letter. Also, you may visit our website at www.thermostat-recycle.org. To contact TRC directly, email Mark.Tibbets@nema.org or call 703-841-3246.

Sincere Regards,

Mark Tibbets
Executive Director

WASTE & RECYCLING NEWS

RECYCLING BRIEFS

Scrap

Schnitzer to expand auto parts biz

A series of transactions will expand Schnitzer Steel Industries' auto parts business, the company said.

The company acquired most of the assets of Waco C. Pull-It Inc. of Waco, Texas, a facility in Stockton, Calif., that will be developed into a specialty self-service facility; and a property adjacent to one of the company's existing facilities in Portland, Ore., that will allow that facility to expand.

"These three transactions continue the expansion of the footprint of our auto parts business and demonstrate the disciplined execution of our stated strategy to develop scale in core supply regions to obtain scrap at the earliest stage of disposal," said Tamera Lundgren, CEO of Schnitzer Steel Industries.

The Waco acquisition adds to SST's existing operations in the Dallas-Fort Worth region and in San Antonio. Lundgren called Texas "a high-growth market."

SST's auto parts business sells used auto parts through 45 self-service facilities located in 11 states and in two Canadian provinces. The company also recycles and exports metals and has a steel manufacturing plant.

Miscellaneous

Two groups join to recycle thermostats

Two groups of users are teaming up to properly dispose of old mercury-containing thermostats.

The Thermostat Recycling Corp. and Heating Air Conditioning & Refrigeration Contractors International have formed a partnership.

Gary Gulka
Vermont Department of Environmental Conservation
103 South Main Street
Waterbury, VT 05671

Re: Annual Report Thermostat Recycling Corporation

Dear Mr. Gulka:

Attached is TRC's 2009 annual collection report for the Department. To the extent practicable TRC has made its best effort to be responsive to the Department's request for expense and collection data.

TRC would like to take the opportunity to summarize some of its major accomplishments in 2009.

- Notwithstanding a severe recession that depressed the replacement market for thermostats, the national recovery of thermostats increased by 14.8 percent keeping almost 1500 pounds of mercury out of solid waste.
- Industry participation in TRC continued to grow and by the end of the year TRC represented 28 manufacturers that historically branded and distributed mercury switch thermostats.
- TRC also saw substantial growth in access to the program, with the number of recycling containers increasing at participating collection locations by 30%. TRC saw solid growth in all collection location types in 2010.

TRC implemented year one of its effort to build and sustain collections of waste mercury thermostats in Vermont. TRC saw a 36.9% increase in the volume of mercury recovered through the program in Vermont last year. TRC was pleased to see the increase in light of our targeted outreach efforts in 2009.

Looking towards 2010, TRC plans on continuing to target HVAC contractors and consumers to build upon the program's success last year. TRC would also like to recognize the Department's contributions to the program in 2009. The active engagement and support by the Department is essential and welcomed.

Sincere Regards,

A handwritten signature in black ink, appearing to read "Mark Tibbetts", is written over a horizontal line.

Mark Tibbetts
Executive Director

2009 Thermostat Recycling Corporation Annual Report

Collection Data

TRC recovered 13,460 pounds of mercury from intact mercury thermostats and mercury switches from Vermont collection locations in 2009. This is an increase of 36.9% over 2008. TRC recovered 1,890 whole thermostats in 2009, an increase of 38% over the previous year.

Table 2: Collections by Location Type

	Retail	Wholesale	HHW
Total Received	42	874	974

As Table 1 indicates the majority of thermostats recovered came from wholesale or HHW locations.

Additional data on program is as follows.

1. Number of TRC Thermostats qualifying (e.g. mercury-switch thermostat with bar-coded sticker attached) for incentive payment?

424 (22.4% of total thermostats collected in 2009¹)

2. Number of thermostats not qualifying for payment?

No Cover: n/a

No bar-coded sticker: 1,466

TRC recovered 6 items with bar-coded stickers attached that were deemed ineligible (e.g. non-mercury thermostat, other mercury containing device, non-mercury containing device, or mercury thermostats collected through retail outlet). Additionally, of the 344 remittance coupons received in 2009, 22 were incomplete, damaged, or otherwise illegible that resulted or will result in non-payment.

Program Education and Outreach

Wholesaler/Retailer Recruitment—

In the majority of states, collection location recruitment is left to TRC, with a modest level of support from the state regulatory agency. Vermont DEC (DEC) approached wholesaler recruitment differently, resulting in a very high-level of initial compliance with the collection mandate.

Working collaboratively with TRC, DEC identified all HVAC wholesale locations in the state² and determined whether the location still had a TRC collection container. DEC also contacted retail locations and regional HHW locations. DEC identified 63 collection locations that either

¹ The incentive program started April 1, 2009. The first bin with included thermostats with incentive stickers was returned in May, 2009.

² DEC had previously provided collection containers to HVAC wholesalers in the state under the voluntary program in 2006 or 2007.

needed a replacement container³ or were new locations. DEC also voluntarily paid the participation fee for all locations.

Upon receiving the list from DEC, TRC shipped 63 collection containers directly to new locations. For existing locations, TRC shipped new program collateral directly to each location. TRC has also provided DEC with additional containers and program collateral.

HVAC Contractor Awareness—TRC conducted a number of activities to raise awareness of the thermostat recycling program and HVAC contractors' legal obligations in Vermont. A key component of the effort was the upgrade of TRC's website and the development of the search tool allowing for easy search of TRC collection locations nationwide. Other activities included:

- **Direct Mail:** With DEC's assistance, TRC obtained a mailing list of nearly 1,100 licensed master plumbers in Vermont. Timed to coincide with the start of the heating season, TRC mailed a 6 x 4.5" colored postcard to this list in August 2009 and repeated the mailing in October (see Appendix D for image of card).
- **Stakeholder Outreach:** TRC contacted and encouraged various stakeholder organizations in Vermont to include information on thermostat recycling in their newsletters and/or websites. National organizations included Air Conditioning Contractors of America, National Association of Oil Heat Service Managers, and Plumbing Heating Cooling Contractors Association. State organizations included Vermont Natural Resources Council, Vermont Licensed Plumbers Association, and Vermont Fuel Oil Dealers Association.
- **National Paid Advertising:** TRC placed a ½ page ad in the August 2009 issue of *Contracting Business*, a leading business-to-business trade publication targeting HVAC contractors with a circulation of approximately 40,000 contractors. TRC also placed a 30-day advertisement on www.HVAC-Talk.com, a web-based "chat-room" for HVAC technicians.
- **Engaging Members:** TRC worked with member companies to promote the program through their sales channels. For instance, Honeywell posted link/advertisement to TRC on its www.contractorpro.com and www.forwardthinking.honeywell.com websites.
- **Contractor Collateral:** TRC developed a multi-purpose "cling-sticker" that can be used by wholesale locations to promote the program. The sticker will work on a door, counter or window. The cling is being included with return bins to Vermont locations. TRC also developed contractor FAQ document and templates which are available for download on TRC's website.

Homeowner/Consumer Awareness—TRC actively marketed the program in Vermont in 2009.

³ A significant number of wholesale locations that had previously received containers from DEC were no longer collecting and/or had misplaced the collection container.

- Website: TRC created a webpage for Vermont (www.thermsotat-recycle.org/vermont) and posted materials on the page regarding Vermont's mercury thermostat disposal ban.
- Paid Advertising: TRC placed animated banner advertisements on the websites of the major Vermont newspapers at the start of fall heating season (see table 3). Web-based advertisements began in late September and ran for approximately 30 days (Copy in Appendix C). TRC purchased a minimum of 250,000 impressions on both websites.

Table 3: Web Advertisements

Website	Type of Advertisement	Size	Number of impressions
Burlington Free Press	Skyscraper	160x600 Pixels	250,000 over one month
Times Argus	Skyscraper	160x600 Pixels	250,000 over one month
Rutland Herald	Skyscraper	160x600 Pixels	
Vermont Today	Skyscraper	160x600 Pixels	
New England Business Journals	Skyscraper	160x600 Pixels	

- Earth-911: TRC partnered with Earth-911, a nationally recognized commercial website that provides information to consumers on recycling. TRC provided them with a list of retail and HHW collection locations (including all locations as of January 1, 2010 in Vermont). TRC also worked with Earth-911 in developing content regarding the need to recycle mercury switch thermostats which was published on the www.earth911.com website.

Program Expenses

TRC is a national program and collection containers were returned from 46 states in 2009. Allocating program costs among individual state in most cases is not practicable. TRC also makes no attempt to prorate expenses against national collections as the labor to process thermostats sourced from Vermont is greater than other states due to the mandatory incentive. Attempting to prorate expenses based on Vermont's share of national collections will under report costs in Vermont.

In Table 5, TRC reports expenses that it can isolate and attribute solely to the program in Vermont.

TRC expenses include as follows:

- TRC Staff and Administration: Includes staff and consultants, general office expenses, telecommunications, legal, and other administrative expenses. Includes labor costs to implement Vermont program.
- Insurance: Pollution and liability insurance.

- Travel: All travel in 2009 and includes travel to promote program.
- Recycling Costs: All costs (including labor) associated with transporting, processing, and properly managing waste thermostats. Also includes cost associated with fulfilling new bin orders and managing TRC collection database.
- New Collection Containers: Direct cost for new containers ordered in 2009.
- Marketing/Outreach & Printing: Includes costs to develop, print, and distribute collateral; also includes direct mail, website development, national and state advertising, sponsorships and other outreach activities.

Table 4: National Program Expenses

TRC Staff and Administration	\$248,066
Recycling Costs	\$222,755
Insurance	\$18,706
Statutory Incentive Payments	\$27,496
New Collection Containers	\$18,130
Travel	\$16,105
Marketing & Outreach	<u>\$96,867</u>
Total	\$648,126

Table 5: Expenses Solely Attributable to Vermont⁴

Vermont Incentive Payments	\$ 1,676
Paid Advertising	\$ 4,175
Print Collateral	
Incentive Coupons	\$ 15,259
"Cling" Stickers	\$ 936
Point of Purchase Pads	<u>\$ 2,996</u>
	\$ 25,042

Recommendations/Next Steps

Vermont's thermostat law went into effect in April, 2009, and with less than a full year of operation it is premature to evaluate the program. As it takes almost a year for a collection container to be filled at many locations, TRC will likely have better data to assess the program's effectiveness and any deficiencies in 2010.

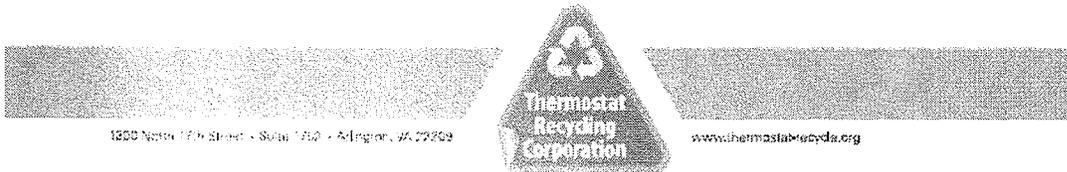

Looking towards 2010, TRC will continue to market the program in the state. As Vermont DEC is also actively marketing and supporting the program, TRC will also continue to collaborate and support DEC's efforts as well.

Planned activities in 2010 include:

⁴ These expenses are included not in addition to the national totals reported in Table 2.

- Direct Mail: TRC plans on sending more direct mail in 2010. While expensive, we feel it is an effective, targeted way of raising awareness in small, rural state like Vermont. TRC will explore developing a new mailing list in the state and may include seeking lists from trade groups and/or commercial sources.
- Advertising: TRC is planning on expanding national advertising in 2010 and will repeat the fall Vermont advertising buy in 2010.
- Trade Shows: TRC plans on exhibiting at National Association of Oil Heat Service Managers annual meeting in Providence, Rhode Island in May 2010 and NH Plumbing and Mechanical Contractors Association in March, 2010. TRC will also be participating in the two large national HVAC trade shows.
- Print Collateral: TRC has printed copies of the “contractor flyer” available for wholesale locations. TRC will work to ensure collection locations are aware this collateral is available and distribute accordingly. TRC will also develop a poster for use at municipal and wholesaler locations promoting thermostat recycling.
- Earned Media: TRC will continue to promote the program in both national and regional press. Ongoing efforts to engage other stakeholder groups are a priority for the program in 2010. A media event with DEC in fall 2010 could help raise general awareness of the program.

Thermostat Manufacturers Support Mercury Thermostat Recycling
Get \$5.00 for each qualified mercury-switch thermostat returned

September 10, 2009—Vermont recently passed a law designed to increase the collection and recycling of waste mercury-switch thermostats. *An Act Relating to the Collection and Disposal of Mercury-Added Thermostats (H.515)* makes a contractor who removes a mercury-switch thermostat from service responsible for properly recycling or disposing of it. Under the new law contractors can no longer leave the thermostat at the customer's premise. Additionally, each qualified thermostat returned to a participating collection location is eligible for a \$5.00 incentive payment.

Mercury is a toxic metal that in its various forms can accumulate in living tissue and cause adverse health effects. When a mercury-switch thermostat is broken and disposed of in a solid waste landfill or incinerator, the mercury can contaminate the air, surface water, and ground water.

Under the new law, manufacturers must collect and recycle waste mercury-switch thermostats at no cost to contractors and home-owners and pay the \$5.00 incentive. Additionally, the law requires every HVAC wholesaler with a physical location in Vermont to act as a collection site for waste mercury-switch thermostats.

To qualify the thermostat must contain mercury and have the cover attached. Contractors simply need to fill out a coupon when they drop off the thermostat at their local HVAC supply house.

"TRC wants contractors to know that it's easy, convenient, and most importantly free for them to properly dispose of mercury-switch thermostats," said Mark Tibbetts, TRC's executive director. "To comply with the law, all HVAC contractors need to do is to hang onto the mercury-switch thermostats they remove from service and drop them off for recycling at their local HVAC supplier."

TRC is a not-for-profit corporation founded in 1997 by thermostat manufacturers to collect and properly dispose of mercury thermostats removed from service. TRC provides HVAC contractors and consumers with a no-cost solution for properly disposing of mercury-switch thermostats. Nationally, TRC has more than 3,000 collection containers in 48 states. TRC currently represents nearly 30 manufacturers that branded and distributed mercury-switch thermostats in the United States.

For more information about the TRC program, contact Executive Director Mark Tibbetts at (703) 841-3246 or Mark_Tibbetts@nema.org. www.thermostat-recycle.org

RE: White-Rodgers Comments on Proposed Regulations: DIVISION 4.5, TITLE 22, CALIFORNIA CODE OF REGULATIONS - CHAPTER 24. MERCURY THERMOSTAT COLLECTION AND PERFORMANCE REQUIREMENTS: Department Reference Number: R-2010-03

Dear Ms. Von Burg:

On behalf of White-Rodgers, a business of Emerson Climate Technologies we submit the following comments on the proposed Mercury Thermostat Collection and Performance Requirement (August 2012) Division 4.5, Title 22, California Code of Regulations, Chapter 24 to implement the Mercury Thermostat Collection Act of 2008 that the Department of Toxic Substances Control ("DTSC") recently circulated for formal review. White-Rodgers appreciates the availability of DTSC staff to discuss development of the proposed regulation. However, the proposed regulation falls short on identifying the feasibility metric and on crafting a collaborative methodology needed to maximize the collection of out of service mercury thermostats.

As a manufacturer of devices and systems engineered to maximize efficiencies and manage energy we recognize the need to protect the environment. That is why in 1998 White-Rodgers along with General Electric and Honeywell founded the Thermostat Recycling Corporation (TRC). Prior to forming the TRC we collected and recycled out of service thermostats regardless of brand. The TRC model strengthened and streamlined the collection process being performed by companies and quickly became the preferred organization for out of service thermostat collection.

As member of both National Electrical Manufacturers Association (NEMA) and the TRC we have been involved with crafting the comments from both organizations. White-Rodgers is in explicit agreement with the comments submitted by NEMA. In addition, White-Rodgers is in explicit agreement with the comments submitted by the TRC. We ask that our aforementioned agreement with these comments be included in the rulemaking file in accordance with Government Code § 11347.3(b)(6).

White
Rodgers™

We would like to thank DTSC for considering these comments along with those submitted by others dedicated to this cause. We remain committed to playing a constructive role in the development and implementation of the Mercury Thermostat Collection and Performance Requirements. We look forward to productive changes in the draft regulation in the future.

Sincere Regards,

Craig Johnson
President
White-Rodgers
