

SUPPLEMENTAL SITE INVESTIGATION (SSI) WORKPLAN ^{1, 2, 3}

TABLE OF CONTENTS

1.0	Introduction	1-01
1.1	Remedial Investigation Objectives	1-01
1.2	Data Quality Objectives.....	1-01
1.3	Scope of Work	1-02
2.0	Summary of Site Background and Previous Site Action	2-01
2.1	Site History and Description	2-01
2.2	Prior Assessments and Agency Determination	2-02
3.0	Field Sampling Plan ⁴	3-01
3.1	Sample Collection	3-01
3.2	Sample Analysis and Validation	3-10
3.3	Data Validation and Evaluation	3-15
4.0	Baseline Risk Assessment Workplan ⁵	4-01
5.0	Public Participation Plan ⁶	5-01
6.0	Quality Assurance Project Plan ⁷	6-01
7.0	Health and Safety Plan ⁷	7-01
8.0	Preparation of SSI Reports.....	8-01
9.0	References.....	9-01

TABLES

Table 1	Summary of PEA Sampling and Analysis Program
Table 2	Summary of PEA Detections and Findings
Table 3	Summary of PEA Health Risk Screening Evaluation
Table 4	Supplemental Soil Gas Sampling Program (if proposed)

Table 5	Supplemental Soil Sampling Program (if proposed)
Table 6	Supplemental Groundwater Sampling Program (if proposed)

FIGURES

Figure 1	Vicinity Map
Figure 2	Site Plan Map
Figure 3	PEA Sampling Locations
Figure 4	Supplemental Sampling Locations

APPENDICES

Appendix A	Field Sampling Plan ⁴
Appendix B	Baseline Risk Assessment Workplan ⁵
Appendix C	Public Participation Plan ⁶
Appendix D	Quality Assurance Project Plan ⁷
Appendix E	Health and Safety Plan ⁷

NOTES for SSI Workplan (beyond PEA):

1. DTSC approval of a SSI Workplan is required if new media type (such as groundwater sampling, or flux chamber sampling in addition to soil gas survey), further groundwater or off-site investigation is necessary to define the source and/or extent of contamination.
2. For existing school sites only, DTSC approval of a SSI Workplan is required if additional data is needed for alternate evaluation (including treatability or feasibility study).
3. If a RAP is anticipated, an RI/FS workplan should be prepared instead.
4. For sites with only additional* or step-out sampling activities necessary to define the extent of the contamination for the same types of contaminants of concern and media), the previously approved PEA Workplan may be updated with an addendum (showing the number and locations of proposed samples) and incorporated into Section 3 of the SSI Workplan by reference. Without a previously approved PEA Workplan, a separate SSI Workplan is required.
5. In consultation with DTSC, a previously approved PEA Workplan may be updated with an addendum and incorporated into Section 4 of the SSI Workplan by reference. In this case, the use of a PEA Screening Risk Evaluation process may be accepted by DTSC.
6. In consultation with DTSC, a Community Profile Report may be used instead of a Public Participation Plan (PPP). However, a PPP is required when the site is considered as a high profile site.
7. The previously approved PEA Workplan may be updated with an addendum and incorporated into Sections 6 and 7 of the SSI Workplan by reference. Without a previously approved PEA Workplan, a separate SSI Workplan is required.

*If DTSC disapproves or returns the PEA due to an inadequate investigation, only an approved PEA Workplan for the requested assessment is required.
